

## High Capacity Feeder Module - Horizontal Transport

---

### Horizontal Transport

Once a sheet has been acquired by the takeaway rolls, it delivers it to the Horizontal Transport. From there the paper passes into the F-Transport in the Paper Handling Module. Drive to the Horizontal Transport is provided by the Horizontal Transport Motor.

**NOTE:** After the sheet clears the takeaway area, the only jam sensing in the remainder of the HCF is the Exit Sensor at the end of the Horizontal Transport.
