

## Tray 3 – Paper Handling Module

### Tray 3 Operator Select Switches

**Switch 2:** Sets the substrate's weight range. This affects the speed and the pitch of the sub-strate as it runs through the machine to optimize reliability and image quality (all trays).

**Switch 1:** Allows operator to select coated or uncoated stock. This tells the machine how much heated air should be blown in the tray to help separate the sheets, ensuring reliable feeding of coated stocks (tray 3 and HCF only).

**Switch 3:** Allows operator to select custom or non-standard sizes to ensure optimum registration (tray 3 and HCF only).
