

## Tray 3 – Paper Handling Module

### Tray 3 Paper Size Sensors

There are five paper size sensors located under the Tray 3 paper plate. Two are used to determine the size of the width and three are determine the size in the feed (length) direction. When paper is loaded in the tray, a front and rear paper guide is set against the paper stack. Actuators attached to the paper guides actuate various combinations of the five Paper Size Sensors to inform the control logic what size paper is in the tray.
