Symbols Used

This documentation uses the following symbols to indicate special information:

Symbol	Description
	Indicates an item of a non-specific nature, possibly classified as Note, Caution, or Warning.
	Indicates an item requiring care to avoid electric shocks.
	Indicates an item requiring care to avoid combustion (fire).
	Indicates an item prohibiting disassembly to avoid electric shocks or problems.
	Indicates an item requiring disconnection of the power plug from the electric outlet.
 Memo	Indicates an item intended to provide notes assisting the understanding of the topic in question.
 REF.	Indicates an item of reference assisting the understanding of the topic in question.
	Provides a description of a service mode.
	Provides a description of the nature of an error indication.

The following rules apply throughout this Service Manual:

1. Each chapter contains sections explaining the purpose of specific functions and the relationship between electrical and mechanical systems with reference to the timing of operation.

In the diagrams,  represents the path of mechanical drive; where a signal name accompanies the symbol, the arrow  indicates the direction of the electric signal.

The expression "turn on the power" means flipping on the power switch, closing the front door, and closing the delivery unit door, which results in supplying the machine with power.

2. In the digital circuits, '1' is used to indicate that the voltage level of a given signal is "High", while '0' is used to indicate "Low". (The voltage value, however, differs from circuit to circuit.) In addition, the asterisk (*) as in "DRMD*" indicates that the DRMD signal goes on when '0'.

In practically all cases, the internal mechanisms of a microprocessor cannot be checked in the field. Therefore, the operations of the microprocessors used in the machines are not discussed: they are explained in terms of from sensors to the input of the DC controller PCB and from the output of the DC controller PCB to the loads.

The descriptions in this Service Manual are subject to change without notice for product improvement or other purposes, and major changes will be communicated in the form of Service Information bulletins.

All service persons are expected to have a good understanding of the contents of this Service Manual and all relevant Service Information bulletins and be able to identify and isolate faults in the machine."

4.1.10 Recommended setting of system management information

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

When multiple users use the machine, it is necessary to advise each user to set the system management information.

Setting ID and password of system administrator on the operation unit under (Additional functions key) > [System management setting] > [Setting of system administrator's information] has an effect of restraining the third person from falsifying information, for the ID and password are required when a user carries out an important setting of the machine.

Under the environment that the setting is not done, if a user who does not sufficiently know operation situation of the machine tries to change the setting, following troubles may occur.

- When the user changes [User ID Management] from [off] to [on], copying operation cannot be done unless ID and password are input.
- When each setting is changed on the network from RUI, that enables to falsify data of address book or delete log.
- When TCP/IP fixed address is changed on the network setting, printing operation via network cannot be done until the port setting is changed.
- When usage restriction of USB device is changed to [on], printing operation via USB becomes disabled.

4.1.11 The Reference Information of the Department ID Management

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Function:

If Department is registered in Department ID Management, users are required to input the Department ID and password when inputting data from the operation unit of the machine. Also, the registration enables to restrict usage and control the usage number of times of Total Parts, Copy, B&W Scan, Color Scan, or Print.

Setting method:

Register Department ID in Department ID Management under Additional Functions key>System Setting.

Operation outline:

Department ID can be registered in [Department ID management] from the operation unit of the machine even though [System Manager Settings] is not done. When registering data in [Department ID Management] using RUI, you need to register yourself as a system manager in [System Manager Settings] and login as a system manager.

When "Detect with the new method" is selected, tone is detected for 3.5 seconds before call origination in order to discriminate between dial tone and voice. If dial tone is detected and the time since line seizure is 3.5 seconds or longer, call origination takes place immediately. If the time since line seizure is less than 3.5 seconds, call origination takes place after waiting for 1 second. (If the time since line seizure reaches 3.5 seconds during the 1-second waiting period, call origination takes place immediately. By default, "Detect with a new method" is assigned for this SW.

5.1.3.2 <002: RTN transmission condition (1)><003: RTN transmission condition (2)><004: RTN transmission condition (3)>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Use it to set RTN signal transmission conditions. Raise these parameters for more lenient conditions if errors occur frequently at time of reception because of transmission of the RTN signal.

Memo:

Any of the following error codes may be indicated at time of reception because of RTN signal transmission
##0104, ##0107, ##0114, ##0201

RTN signal transmission condition (1) affects the ratio of error lines to the total number of lines per single page of received images.

RTN signal transmission condition (2) affects the standard value (*2) of burst errors (*1).

RTN signal condition (3) affects the number of errors not reaching the standard value of burst errors.

*1: transmission error occurring cover several lines.

*2: for instance, if '15' is set, a single burst error will represent an error occurring continuously cover 15 lines.

If any of these lines is detected while an image signal is being received, the RTN signal will be transmitted after receiving the protocol signal of the transmitting party. Higher parameters restrict the transmission of the RTN signal.

5.1.3.3 <005: NCC pause length (pre-ID code)>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

5.1.3.4 <006: NCC pause length (post-ID code)>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Use it to set the length of the pause automatically entered between ID code and telephone number of the other party when the NCC (New Common Carrier) line is used for dialing.

5.1.3.5 <010: line connection identification length>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Memo:

Any of the following error codes may be indicated because of the condition of the line

##0005, ##0018

The line condition identification time is between when the dial signal is transmitted and when the line condition is cut for the transmitting party, while it is between when the DIS signal is transmitted and when the line is cut for the receiving party.

5.1.3.6 <011: T.30 T1 timer (for reception)>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Set the T1 timer for the receiver (wait time after DIS transmission starts until a significant signal is received).

5.1.3.7 <013: T.30 EOL timer>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Set it so that the 1-line transmission time is longer for reception to prevent reception errors caused by a long data length per line (e.g., computer FAX).

5.1.3.8 <016: time length to first response at time of fax/tel switchover>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Use it to set the pattern of the pseudo RBT signal transmitted at time of a fax/tel switchover.

5.1.3.10 <020: pseudo CI signal pattern ON time length><021: pseudo CI signal pattern OFF time length (short)><022: pseudo CI signal pattern OFF time length (long)>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

5.1.3.11 <023: CNG detention level for fax/tel switchover>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Use it to set the CNG detention level for a fax/tel switchover.

5.1.3.12 <024: pseudo RBT transmission level at time of fax/tel switchover>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Sets the signal detection time for the answering machine connection function operation. When the answering machine connection function is operating, if the function does not operate normally because the fax does not detect CNG signal sent from the line, raise this parameter to increase the signal detection time.

5.1.3.14 <027: V.21 low-speed flag preamble identification length>

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Select "Enable" to drive the main motor for a specified period of time to apply idling and developing bias (AC + DC) to prevent the thinning of the image density when the unit is installed or the developing unit is replaced in a low-temperature, low-humidity region. This mode works only on a new developing assembly and before a toner cartridge is loaded.

If the user uses paper that causes fixed toner on paper to be fused and adhered to drum, selecting "Yes" will clean the drum by forming a black band on the drum surface during the reverse rotation which is performed after printing on 50 sheets.

 Implementation of this mode could result in a drum life falling short of its life expectancy.

5.1.9 License Management (LMS)

5.1.9.1 Outline

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

LMS (License Management Service)

License Management System is to acquire a figure row from sending the information of the license certificate number, which is in the same package as option product, machine serial number and the name of the main machine to the server that has a license issue function on the Internet.

Option function will be able to be used by inputting the acquired figures from the main machine operation board through license registration screen in the users mode.

License option function is implemented on all the main system of the products, which is shipped from the factory, but it would not activate unless input operation has been made through the license registration screen.

Acquisition of the license key and registration of the device is basically done by the user. Detailed procedure is described in the users guide. However, as for reference, summary of the procedure is mentioned below.

(1) Access to LMS from the below URL and follow the direction on the screen to acquire the license key.

URL for LMS

<http://www.canon.com/lms/license/>

MEMO:

To acquire the license key, 16 digit figures on the license access number certificate and the device serial number (for example: ABC01234), which the license is going to be installed is necessary.

Device serial number will indicate on "Serial Number" when pressing the counter confirmation key on the main machine.

(2) Copy the license key of 24 digit figures, which is indicated on the WEB browser to the designated column on license access number certificate.

Reconfirm that there is no miss-copy of the 24 digit figures. Explain to the user that license access number certificate should be kept with care.

(3) Input the copy of the license key from; user mode > system management setting> license registration and press enter. The license key will be registered and function will activate.

If the function do not activate, error message will indicate. Confirm the points below due to contents of the error message.

```
"Value of the license key is incorrect. Confirm license key"
>> Using the license key, which was issued to another device?
>> Incorrect license key was input?
>> Proper license key used?
"This function is already active"
>> Isn't the relevant kit already active?
```

(4) Switch off the main power supply and after 10 seconds switch on the power supply again.

(5) Registered license will be active when after the power supply of the main device switch has been cut off once and put on again. Once the license starts properly, press counter confirmation key then press device configuration and confirm that in the option column that the relevant kit has been indicated.

5.1.9.2 Method of confirming license option

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Confirmation could be made whether the license option is active or not in the SOFT-ID PRM item by outputting the SPEC REPORT from the service mode.

Output method:

- Select '# REPORT' from service mode.
- Select '# REPORT OUTPUT'.
- Select '# REPORT OUTPUT SPEC LIST' and press 'OK'.

Check the SOFT-ID RPM column from the SPEC REPORT output. License is active on the items which indicates 'ON/ON'.

5.1.9.3 Inactivity of the transmitted license

iR2022i / iR2025 / iR2030 / iR2018 / iR2022 / iR2018i

Inactivity of the transmitted license

Situation of using this service mode

This service mode is to be used exceptionally on the assumption that when malfunction occurs on the device (caused by device) and the license to be transferred to the substitute device and to inactivate the license.

This operation is called 'Inactivity of the transmitted license'. Transmission could be selected to the same device and could be used to cease the function temporary. But if the license is made inactive by mistake, it is necessary to call the dealer to reactivate.

Take utmost precaution when inactivating the license

To inactivate the license, operation through the service mode has to be made and to prove the function is inactive; issue of the function inactive certificate key is necessary.

This operation is valid to any of the each optional function and at the point of issuing the function inactive certificate key the function will be inactive and could not be used.

New license key to install to the transmitted device will be issued when the information of function inactive certificate key, serial number of the transmission origin device, serial number of new destination of transmitting device and the reason for transmitting is given to the dealer. Take a note of the new license key and after the registration to the new transmitted device, inform the user that the new license key should be kept with care.

Operation procedures

(1) Go into the service mode and indicate the below mentioned service mode. (Key operation to go into the service mode is to be pressed one at a time. Orders are *, 2, 8, *).

After going into the service mode, use the arrow on the both sides of the touch panel and press 'OK' if the decision is made.

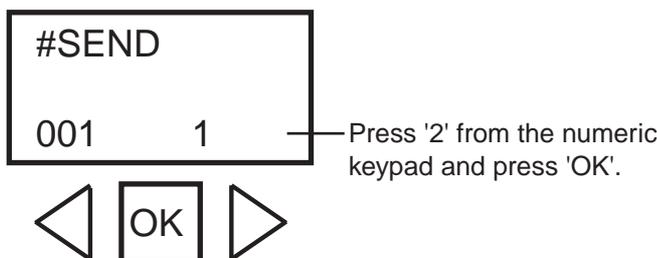

(2) Indicate '#LMS'.

(3) Press 'OK' and indicate '#LMS INACTIVE'.

(4) Indicate 'BDL-IMAGE (CARPS 2 for Japanese market) or 'SEND'.

(5) Press 'OK'.

(6) Press '2' from the numeric keypad and press 'OK'.

F-5-5

1. Take a note of the license transmit number which will be indicated with 24 digits.

2. The indicated number is just for this operation and it would not be saved.

3. If the power is switched off, the indicated number will disappear and if the note of the number has not been taken, transmission of the license will be impossible.

4. Even pressing the reset key to clear the indication, there will be no recovery of the number.

Example of the transmitted license indication:

F-5-6

(7) Switch the power supply OFF/ON of the main machine.

Reference:

At procedure (4) when indicating the license option, it indicates '001 1'. The last digit '1' shows that the license is active. After transmitting the license the last digit will change to '2', which means that the license has been transmitted. If the option is standard equipped, the last digit will indicate '3', which means that the license could not be transmitted.

(8) Contact the dealer and inform the function inactive certificate key, serial number of the transmission origin device, and serial number of new transmitting device, which is necessary to transmit the license.

Upon given information above, new license key will be issued, which the license could be registered to the new transmitting device.

(9) Register the new license key to the transmitted device and confirm that the function is active.

Chapter 8 Upgrading

8.1 Upgrading

8.1.1 Overview of Upgrade (LCD type)

iR2018 / iR2022

This machine and options can be upgraded by downloading system software programs from the personal computer (hereafter called as the PC) in which a service support tool (hereafter called SST) has been loaded.

System software programs and upgrade tools are listed in the following table:

T-8-1

Type	System software type	Upgrade tool	Remarks
		SST	
Main unit	System (main controller)	Yes	The main controller also controls the reader.
	Boot (boot program)	Yes	
Option	PCL (PCL printer kit-V1)	Yes	
	Fin_U2 (Finisher-U2)	Yes	Dedicated service tool (Downloader PCB: FY9-2034)

Pay attention to the following points when upgrading.

1. When upgrading Boot, make sure to update Boot first.
2. When upgrading the following software, make sure to update all to the same version.

- System
- PCL

8.1.2 Overview of Upgrade (Touch panel type)

iR2022i / iR2025 / iR2030 / iR2018i

This machine and options can be upgraded by downloading system software programs from the personal computer (hereafter called as the PC) in which a service support tool (hereafter called SST) has been loaded.
 System software programs and upgrade tools are listed in the following table:

T-8-2

Type	System software type	Upgrade tool	Remarks
		SST	
Main unit	System (main controller)	Yes	Main controller also controls the reader.
	Boot (boot program)	Yes	
	Language (language module)	Yes	USB memory
	PCL_op	Yes	16MB ROM PCB
Option	PCL_common (PCL Printer Kit-W1)	Yes	*1
	Fin_U2 (Finisher-U2)	Yes	Dedicated service tool (Downloader PCB: FY9-2034)

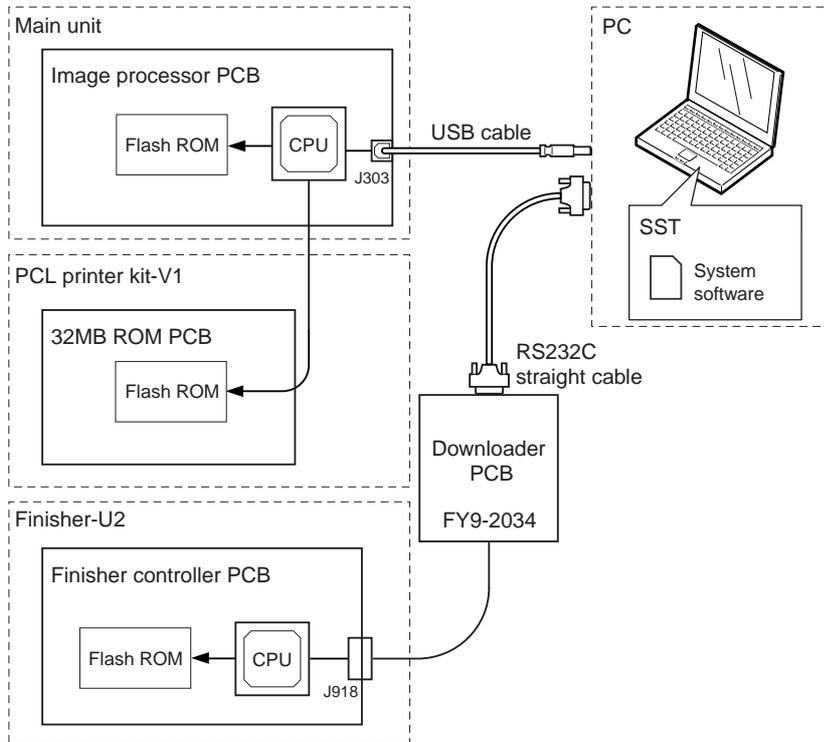

*1. PCL_common is the software stored in the optionally available extended 32MB ROM PCB. It consists of the firmware for PCL printer function and the main control firmware. Inserting the 32MB ROM PCB in the extended slot in the image processor PCB allows the main controller to operate under the control of the firmware stored in the 32MB ROM PCB.

- Pay attention to the following points when upgrading.
1. When upgrading Boot, make sure to update Boot first.
 2. When upgrading the following software, make sure to update all to the same version.
 - System
 - Language
 - PCL
