Subject:	<i>NOTE: Limitation to skipping versions when updating firmware</i>	
Model:	FS-1016MFP	

Firmware upgrade can, in most cases, be made from version 1 to 3. In doing so, it's possible to skip version 2. However, sometimes this is not possible. This is due to drastic changes in the firmware architecture that require the first version of firmware with that architecture. For the FS-1016MFP the following diagram applies:

	Update to			
From	1.56A	1.61A	1.63A	1.67A
1.56A	OK	OK	x	x
1.61A	OK	OK	OK	OK
1.63A	OK	OK	OK	OK
1.67A	OK	OK	OK	OK

Please note that to upgrade the firmware from version 1.56A to 1.63A or higher, it will be necessary to upgrade to version 1.61A first.

When attempting to update from 1.56A to 1.63A or upper, following error is displayed.
