

Service Manual

MF4300 Series

Canon

Application

This manual has been issued by Canon Inc. for qualified persons to learn technical theory, installation, maintenance, and repair of products. This manual covers all localities where the products are sold. For this reason, there may be information in this manual that does not apply to your locality.

Corrections

This manual may contain technical inaccuracies or typographical errors due to improvements or changes in products. When changes occur in applicable products or in the contents of this manual, Canon will release technical information as the need arises. In the event of major changes in the contents of this manual over a long or short period, Canon will issue a new edition of this manual.

The following paragraph does not apply to any countries where such provisions are inconsistent with local law.

Trademarks

The product names and company names used in this manual are the registered trademarks of the individual companies.

Copyright

This manual is copyrighted with all rights reserved. Under the copyright laws, this manual may not be copied, reproduced or translated into another language, in whole or in part, without the written consent of Canon Inc.

Caution

Use of this manual should be strictly supervised to avoid disclosure of confidential information.

Symbols Used

This documentation uses the following symbols to indicate special information:

| Symbol | Description |
|---|---|
|  | Indicates an item of a non-specific nature, possibly classified as Note, Caution, or Warning. |
|  | Indicates an item requiring care to avoid electric shocks. |
|  | Indicates an item requiring care to avoid combustion (fire). |
|  | Indicates an item prohibiting disassembly to avoid electric shocks or problems. |
|  | Indicates an item requiring disconnection of the power plug from the electric outlet. |
|  Memo | Indicates an item intended to provide notes assisting the understanding of the topic in question. |
|  REF. | Indicates an item of reference assisting the understanding of the topic in question. |
|  | Provides a description of a service mode. |
|  | Provides a description of the nature of an error indication. |

Introduction

The following rules apply throughout this Service Manual:

1. Each chapter contains sections explaining the purpose of specific functions and the relationship between electrical and mechanical systems with reference to the timing of operation.

In the diagrams,  represents the path of mechanical drive; where a signal name accompanies the symbol, the arrow  indicates the direction of the electric signal.

The expression "turn on the power" means flipping on the power switch, closing the front door, and closing the delivery unit door, which results in supplying the machine with power.

2. In the digital circuits, '1' is used to indicate that the voltage level of a given signal is "High", while '0' is used to indicate "Low". (The voltage value, however, differs from circuit to circuit.) In addition, the asterisk (*) as in "DRMD*" indicates that the DRMD signal goes on when '0'.

In practically all cases, the internal mechanisms of a microprocessor cannot be checked in the field. Therefore, the operations of the microprocessors used in the machines are not discussed: they are explained in terms of from sensors to the input of the DC controller PCB and from the output of the DC controller PCB to the loads.

The descriptions in this Service Manual are subject to change without notice for product improvement or other purposes, and major changes will be communicated in the form of Service Information bulletins.

All service persons are expected to have a good understanding of the contents of this Service Manual and all relevant Service Information bulletins and be able to identify and isolate faults in the machine."

Contents

Chapter 1 Introduction

| | |
|---|-------|
| 1.1 Product Specifications | 1- 1 |
| 1.1.1 Names of Parts | 1- 1 |
| 1.1.1.1 External View | 1- 1 |
| 1.1.1.2 Section View (Host Machine) | 1- 4 |
| 1.1.1.3 Section View (ADF/DADF) | 1- 5 |
| 1.1.1.4 Control panel | 1- 6 |
| 1.1.2 Safety | 1- 7 |
| 1.1.2.1 Safety of the Host Machine's Laser Mechanism | 1- 7 |
| 1.1.2.2 CDRH Regulations | 1- 7 |
| 1.1.2.3 Handling of the Laser Assembly | 1- 8 |
| 1.1.2.4 Safety of the Toner | 1- 8 |
| 1.1.2.5 Fire Attention | 1- 8 |
| 1.1.2.6 Points no Note when Replacing / Disposing the Lithium Battery | 1- 8 |
| 1.1.3 Product Specifications | 1- 9 |
| 1.1.3.1 Host Machine Specifications | 1- 9 |
| 1.1.3.2 ADF/DADF Specifications | 1- 10 |
| 1.1.3.3 FAX Specifications | 1- 10 |
| 1.1.4 Function List | 1- 11 |
| 1.1.4.1 Scanning Range (ADF/DADF) | 1- 11 |
| 1.1.4.2 Scanning Range (copyboard) | 1- 11 |
| 1.1.4.3 Recording Range (Copy) | 1- 12 |
| 1.1.4.4 Recording Range (Reception) | 1- 13 |
| 1.1.4.5 Recording Range (Printer) | 1- 13 |
| 1.1.4.6 Operation Environment of the Printer Driver | 1- 14 |
| 1.1.4.7 Network Specifications | 1- 14 |

Chapter 2 Basic Operation

| | |
|--------------------------------------|------|
| 2.1 Construction | 2- 1 |
| 2.1.1 Function Configuration | 2- 1 |
| 2.2 Basic Sequence | 2- 1 |
| 2.2.1 Basic Operation Sequence | 2- 1 |

Chapter 3 Original Exposure System

| | |
|---|------|
| 3.1 Basic Construction | 3- 1 |
| 3.1.1 Specifications / Control / Function List | 3- 1 |
| 3.1.2 Major Components | 3- 1 |
| 3.2 Parts Replacement Procedure | 3- 3 |
| 3.2.1 Scanner Unit | 3- 3 |
| 3.2.1.1 Preparation for Removing the Scanner Unit | 3- 3 |
| 3.2.1.2 Removing the Scanner Unit | 3- 3 |
| 3.2.2 Reader Motor | 3- 3 |
| 3.2.2.1 Preparation for Removing the Flat Bed Motor | 3- 3 |
| 3.2.2.2 Removing the Flat Bed Motor | 3- 3 |
| 3.2.3 Contact Sensor | 3- 5 |
| 3.2.3.1 Removing the Contact Sensor | 3- 5 |

Chapter 4 Original Feeding System

| | |
|-----------------------------------|------|
| 4.1 Basic Operation | 4- 1 |
| 4.1.1 Basic Operation (ADF) | 4- 1 |

Contents

| | |
|--|-------|
| 4.1.2 Basic Operation (DADF) | 4- 2 |
| 4.1.3 Original Detection | 4- 4 |
| 4.2 Detection Jams..... | 4- 5 |
| 4.2.1 Jam Detection | 4- 5 |
| 4.3 ADF/DADF | 4- 6 |
| 4.3.1 Pick-up Roller..... | 4- 6 |
| 4.3.1.1 Removing the ADF Pickup Roller | 4- 6 |
| 4.3.1.2 Removing the DADF Pickup Roller Unit | 4- 6 |
| 4.3.2 ADF Motor..... | 4- 8 |
| 4.3.2.1 Preparation for Removing the ADF/DADF Motor..... | 4- 8 |
| 4.3.2.2 Removing the ADF Motor | 4- 8 |
| 4.3.2.3 Removing the DADF Motor..... | 4- 9 |
| 4.3.3 Separation Pad | 4- 12 |
| 4.3.3.1 Removing the ADF Separation Pad..... | 4- 12 |
| 4.3.3.2 Removing the DADF Separation Pad | 4- 12 |

Chapter 5 Laser Exposure

| | |
|---|------|
| 5.1 Overview/Configuration | 5- 1 |
| 5.1.1 Overview | 5- 1 |
| 5.2 Controlling the Laser Activation Timing | 5- 2 |
| 5.2.1 Laser ON / OFF Control..... | 5- 2 |
| 5.3 Controlling the Intensity of Laser Light | 5- 2 |
| 5.3.1 Auto Photoelectric Current Control (APC) | 5- 2 |
| 5.4 Controlling the Laser Scanner Motor..... | 5- 4 |
| 5.4.1 Overview | 5- 4 |
| 5.4.2 Scanner Motor Speed Control | 5- 4 |
| 5.4.3 Detection of Fault of the Scanner Motor | 5- 4 |
| 5.5 Parts Replacement Procedure | 5- 5 |
| 5.5.1 Laser/Scanner Unit | 5- 5 |
| 5.5.1.1 Preparation for Removing the Laser Scanner Unit | 5- 5 |
| 5.5.1.2 Removing the Laser Scanner Unit | 5- 5 |

Chapter 6 Image Formation

| | |
|---|------|
| 6.1 Overview/Configuration | 6- 1 |
| 6.1.1 Configuration..... | 6- 1 |
| 6.1.2 Print Process..... | 6- 1 |
| 6.2 Driving and Controlling the High-Voltage System | 6- 2 |
| 6.2.1 Generation of Transfer Charging Bias | 6- 2 |
| 6.3 Toner Cartridge | 6- 3 |
| 6.3.1 Toner Level Detection | 6- 3 |
| 6.4 Parts Replacement Procedure | 6- 4 |
| 6.4.1 Transfer Charging Roller..... | 6- 4 |
| 6.4.1.1 Removing the Transfer Charging Roller | 6- 4 |

Chapter 7 Pickup and Feed System

| | |
|----------------------------------|------|
| 7.1 Overview/Configuration | 7- 1 |
| 7.1.1 Overview | 7- 1 |
| 7.2 Other Control..... | 7- 2 |
| 7.2.1 Overview | 7- 2 |
| 7.3 Detection Jams..... | 7- 3 |
| 7.3.1 Jam Detection Outline..... | 7- 3 |
| 7.3.1.1 Overview | 7- 3 |
| 7.3.2 Delay Jams | 7- 3 |
| 7.3.2.1 Pickup Delay Jam | 7- 3 |

| | |
|---|------|
| 7.3.2.2 Delivery Delay Jam | 7- 3 |
| 7.3.3 Stationary Jams | 7- 3 |
| 7.3.3.1 Pickup Stationary Jam | 7- 3 |
| 7.3.3.2 Delivery Stationary Jam | 7- 3 |
| 7.3.4 Other Jams | 7- 3 |
| 7.3.4.1 Door Open Jam | 7- 3 |
| 7.3.4.2 Wrapping Jam | 7- 4 |
| 7.3.4.3 Residual Jam at Startup | 7- 5 |
| 7.4 Duplex Unit | 7- 6 |
| 7.4.1 Overview | 7- 6 |
| 7.5 Parts Replacement Procedure | 7- 7 |
| 7.5.1 Main Motor | 7- 7 |
| 7.5.1.1 Preparation for Removing Main Motor | 7- 7 |
| 7.5.1.2 Removing Main Motor | 7- 7 |
| 7.5.2 Separation Pad | 7- 7 |
| 7.5.2.1 Preparation for Removing Separation Pad | 7- 7 |
| 7.5.2.2 Removing Separation Pad | 7- 7 |
| 7.5.3 Pickup Roller | 7- 7 |
| 7.5.3.1 Removing Pickup Roller | 7- 7 |

Chapter 8 Fixing System

| | |
|--|------|
| 8.1 Overview/Configuration | 8- 1 |
| 8.1.1 Specification/Control/Function List | 8- 1 |
| 8.1.2 Overview | 8- 1 |
| 8.2 Various Control Mechanisms | 8- 3 |
| 8.2.1 Controlling the Temperature of the Fixing Unit | 8- 3 |
| 8.2.1.1 Fixing Temperature Control | 8- 3 |
| 8.3 Protection Function | 8- 4 |
| 8.3.1 Protection Function | 8- 4 |
| 8.4 Parts Replacement Procedure | 8- 6 |
| 8.4.1 Fixing Unit | 8- 6 |
| 8.4.1.1 Preparation for Removing Fixing Assembly | 8- 6 |
| 8.4.1.2 Removing Fixing Assembly | 8- 6 |
| 8.4.2 Fixing Film Unit | 8- 6 |
| 8.4.2.1 Preparation for Removing Fixing Film Unit | 8- 6 |
| 8.4.2.2 Removing Fixing Film Unit | 8- 7 |

Chapter 9 External and Controls

| | |
|---|------|
| 9.1 Control Panel | 9- 1 |
| 9.1.1 Outline | 9- 1 |
| 9.2 Power Supply | 9- 1 |
| 9.2.1 Power Supply | 9- 1 |
| 9.2.1.1 Power Supply Route | 9- 1 |
| 9.2.2 Protection Function | 9- 1 |
| 9.2.2.1 Protecting Function | 9- 1 |
| 9.3 Parts Replacement Procedure | 9- 2 |
| 9.3.1 Front Cover | 9- 2 |
| 9.3.1.1 Removing the Front Cover | 9- 2 |
| 9.3.2 Rear Cover | 9- 2 |
| 9.3.2.1 Preparation for Removing the Rear Cover | 9- 2 |
| 9.3.2.2 Removing the Rear Cover | 9- 2 |
| 9.3.3 Right Cover | 9- 2 |
| 9.3.3.1 Removing the Right Cover | 9- 2 |
| 9.3.4 Left Cover | 9- 3 |
| 9.3.4.1 Removing the Left Cover | 9- 3 |
| 9.3.5 Upper Cover | 9- 4 |

Contents

| | |
|--|------|
| 9.3.5.1 Preparation for Removing the Upper Cover..... | 9- 4 |
| 9.3.5.2 Removing the Upper Cover | 9- 4 |
| 9.3.6 Cartridge Cover..... | 9- 4 |
| 9.3.6.1 Preparation for Removing the Printer Cover..... | 9- 4 |
| 9.3.6.2 Removing the Printer Cover..... | 9- 4 |
| 9.3.7 Operation Panel Unit..... | 9- 4 |
| 9.3.7.1 Removing the Control Panel Unit..... | 9- 4 |
| 9.3.8 SCNT Board..... | 9- 5 |
| 9.3.8.1 Preparation for Removing the SCNT PCB..... | 9- 5 |
| 9.3.8.2 Removing the SCNT PCB..... | 9- 5 |
| 9.3.8.3 Actions At Replacing the SCNT PCB..... | 9- 5 |
| 9.3.9 DCNT Board | 9- 6 |
| 9.3.9.1 Preparation for Removing the DCNT PCB..... | 9- 6 |
| 9.3.9.2 Removing the DCNT PCB | 9- 6 |
| 9.3.10 Power Supply PCB..... | 9- 7 |
| 9.3.10.1 Preparation for Removing the Power Supply PCB..... | 9- 7 |
| 9.3.10.2 Removing the Power Supply PCB | 9- 7 |
| 9.3.11 High-voltage Power Supply Board | 9- 7 |
| 9.3.11.1 Preparation for Removing the High Voltage PCB | 9- 7 |
| 9.3.11.2 Removing the High Voltage PCB | 9- 8 |

Chapter 10 Maintenance and Inspection

| | |
|--|-------|
| 10.1 Periodically Replaced Parts..... | 10- 1 |
| 10.1.1 Periodically Replaced Parts | 10- 1 |
| 10.2 Periodical Service | 10- 1 |
| 10.2.1 Periodically Service Items | 10- 1 |
| 10.3 Cleaning | 10- 1 |
| 10.3.1 Cleaning Items | 10- 1 |
| 10.3.2 Cleaning Method (External Covers) | 10- 1 |
| 10.3.3 Cleaning Method (Reader Unit) | 10- 2 |
| 10.3.4 Cleaning Method (Pressure Roller)..... | 10- 3 |

Chapter 11 Measurement and Adjustments

| | |
|-------------------------------------|-------|
| 11.1 Basic Adjustments | 11- 1 |
| 11.1.1 Paper Margin Adjustment..... | 11- 1 |
| 11.1.2 Reading Adjustment..... | 11- 1 |
| 11.1.3 Print Adjustment..... | 11- 2 |

Chapter 12 Correcting Faulty Images

| | |
|---|-------|
| 12.1 Outline of Electrical Components | 12- 1 |
| 12.1.1 Clutch/Solenoid/Motor/Fan..... | 12- 1 |
| 12.1.1.1 List of Solenoids/Motors..... | 12- 1 |
| 12.1.2 Sensor..... | 12- 3 |
| 12.1.2.1 List of Sensors | 12- 3 |
| 12.1.3 PCBs | 12- 5 |
| 12.1.3.1 List of PCBs | 12- 5 |

Chapter 13 Error Code

| | |
|---------------------------------|-------|
| 13.1 Error Code | 13- 1 |
| 13.1.1 Error Code Outline | 13- 1 |
| 13.1.2 Error Code | 13- 1 |

Chapter 14 Service Mode

| | |
|--|--------|
| 14.1 Outline | 14- 1 |
| 14.1.1 Setting Service Data | 14- 1 |
| 14.1.2 How to Activate Service Mode..... | 14- 1 |
| 14.1.3 Service Data Menu | 14- 2 |
| 14.2 Service Soft Switch Settings (SSSW) | 14- 4 |
| 14.2.1 Outline | 14- 4 |
| 14.2.1.1 SOFT SWITCH Explained..... | 14- 4 |
| 14.2.2 SSSW-SW02: | 14- 6 |
| 14.2.2.1 Function List..... | 14- 6 |
| 14.2.2.2 Bit 2 and 3 Elaborated..... | 14- 6 |
| 14.2.2.3 Bit 5 Elaborated..... | 14- 6 |
| 14.2.3 SSSW-SW04 | 14- 6 |
| 14.2.3.1 Function List..... | 14- 6 |
| 14.2.3.2 Bit 8 Elaborated..... | 14- 7 |
| 14.2.4 SSSW-SW10 | 14- 7 |
| 14.2.4.1 Function List..... | 14- 7 |
| 14.2.4.2 Bit 1 Elaborated..... | 14- 8 |
| 14.2.4.3 Bit 2 Elaborated..... | 14- 8 |
| 14.2.5 SSSW-SW16 | 14- 8 |
| 14.2.5.1 Function List..... | 14- 8 |
| 14.2.6 SSSW-SW20 | 14- 8 |
| 14.2.6.1 ã@ñalóo..... | 14- 8 |
| 14.2.6.2 Bit6ÅA7ÅA8ÇÃèçP..... | 14- 8 |
| 14.2.7 SSSW-SW21 | 14- 9 |
| 14.2.7.1 Function List..... | 14- 9 |
| 14.2.7.2 Bit 4 Elaborated..... | 14- 9 |
| 14.2.8 SSSW-SW23 | 14- 9 |
| 14.2.8.1 ã@ñalóo..... | 14- 9 |
| 14.2.8.2 Bit5ÅA6ÇÃèçP | 14- 10 |
| 14.2.8.3 Bit7ÅA8ÇÃèçP | 14- 10 |
| 14.2.9 SSSW-SW30 | 14- 10 |
| 14.2.9.1 Function List..... | 14- 10 |
| 14.2.9.2 Bit 7 and 8 Elaborated..... | 14- 11 |
| 14.2.10 SSSW-SW37 | 14- 11 |
| 14.2.10.1 Function List | 14- 11 |
| 14.2.10.2 Bit 1 to Bit 6 Elaborated..... | 14- 11 |
| 14.2.11 SSSW-SW39 | 14- 12 |
| 14.2.11.1 Function List | 14- 12 |
| 14.2.11.2 Bit 7 Elaborated..... | 14- 12 |
| 14.2.11.3 Bit 8 Elaborated..... | 14- 13 |
| 14.2.12 SSSW-SW51 | 14- 13 |
| 14.2.12.1 Function List | 14- 13 |
| 14.2.12.2 Bit 3 and 4 Elaborated..... | 14- 13 |
| 14.2.13 SSSW-SW54 | 14- 13 |
| 14.2.13.1 Function List | 14- 13 |
| 14.2.13.2 Bit 6 and 7 Elaborated..... | 14- 14 |
| 14.3 Test Mode (TEST) | 14- 15 |
| 14.3.1 Overview..... | 14- 15 |
| 14.3.1.1 Outline of test mode | 14- 15 |
| 14.3.1.2 Test mode menu | 14- 15 |
| 14.3.2 Faculty Test | 14- 16 |
| 14.3.2.1 Print test pattern | 14- 16 |
| 14.3.2.2 êMçÜEeÉXÉg | 14- 16 |
| 14.3.2.3 Sensor test | 14- 16 |
| 14.3.2.4 Key test | 14- 16 |

Chapter 15 Service Tools

| | |
|--------------------------|-------|
| 15.1 Service Tools | 15- 1 |
|--------------------------|-------|

Contents

1.1.2 Safety

1.1.2.1 Safety of the Host Machine's Laser Mechanism

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

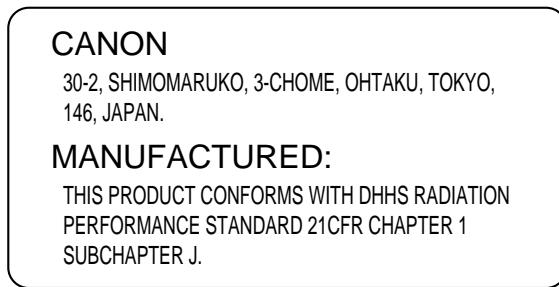

Laser radiation can prove to be harmful to the human body. The host machine's laser scanning system is completely sealed by means of a protective housing and external covers so that its light will not leak outside the host machine as long as the host machine is used normally.

1.1.2.2 CDRH Regulations

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The Center for Devices and Radiological Health (CDRH) of the US Food and Drug Administrator put into forth regulations that relate to laser products on August 2nd, 1976.

These regulations apply to laser products produced on and after August 1st, 1976, and prohibit the sale of laser products without certification. The following labels certify compliance with the CDRH regulations, and must be attached to all laser products that are sold in the US.

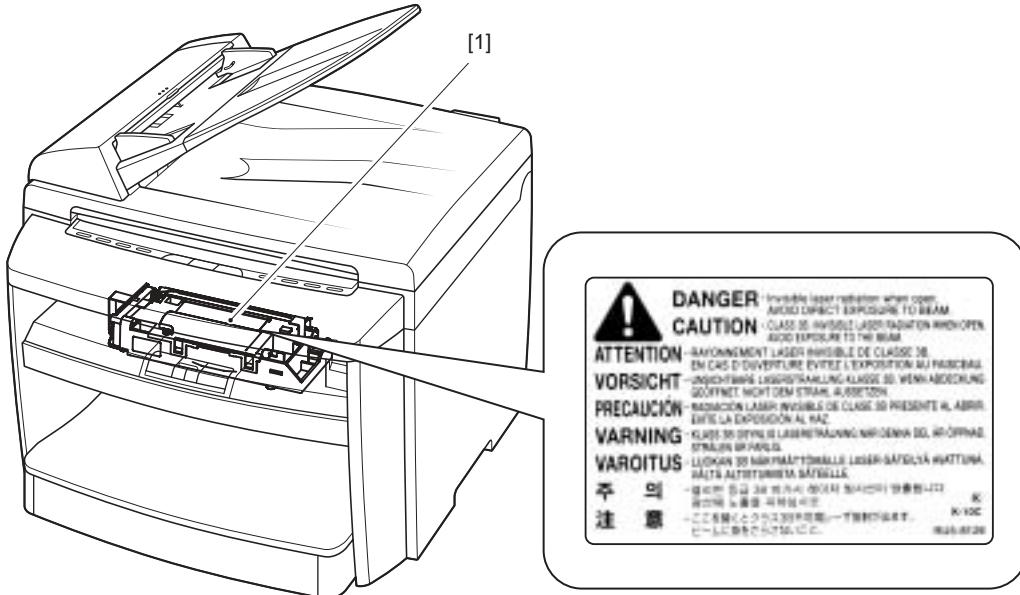

F-1-10

1.1.2.3 Handling of the Laser Assembly

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

When performing servicing work around the laser scanner unit of this machine, be sure not to insert a highly reflective tool such as a driver directly into the laser light path. Also be sure to take off a watch or ring, etc. during servicing work. (Otherwise, the reflected laser beam may enter the eye.) The color of the laser light for this machine is red. The labels [1] and [2] shown in the figure below are attached on the covers where the laser light may be reflected. Further, no adjustment can be made to the laser scanner unit of this machine in the field.

The label [1] shown in the figure below is attached on the cover of the laser scanner assembly.

F-1-11

1.1.2.4 Safety of the Toner

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Toner in General

Toner is a non-toxic material made up of plastic, iron, and small amounts of dye.

Be sure not to throw toner into the fire. Doing so may cause an explosion.

How to handle the toner adhered

1. When toner is adhered to the skin or clothing, wipe it off the skin or clothing by a dry tissue and wash the skin or clothing with water.
2. If you use hot water, toner is turned into gel and soaks into clothing. Under such a condition, toner cannot be removed.
3. Do not make toner come into contact with a vinyl material because they tend to react with each other.

1.1.2.5 Fire Attention

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

It is dangerous to throw the parts that include combustible materials such as lithium battery and toner cartridge etc., into fire. Any used battery must always be disposed according to the appropriate local regulations.

1.1.2.6 Points no Note when Replacing / Disposing the Lithium Battery

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

There is a risk of explosion if the battery is replaced with an incorrect type.
Be sure to discard the used battery following the instruction in the manual.

| Reproduction method | Indirect electrostatic copying method |
| Exposure method | Semiconductor laser |
| Charging method | Roller contact charging method |
| Development method | Dry system - element jumping development method |
| Transfer method | Roller transfer method |
| Separation method | Electrostatic separation (neutralizing needle) and curvature separation |
| Pickup method | Cassette pick-up: 1 cassette Manual feeding pick-up |
| Cassette pickup method | Pad separation method |
| Multifeeder pickup method | Pad separation method |
| Drum cleaning method | Rubber blade |
| Fixing method | On-demand fixing |
| Toner supply type | By drum style toner cartridge |
| Toner type | Magnetic negative toner |
| Toner save mode | Yes |
| Original type | Sheets, books, solids (up to 2 kg) |
| Maximum original size | Fixed: 216mm x 297mm ADF: 216mm x 356mm |
| Reproduction ratio | 1 to 1 + / - 1.0 %, 1 to 2.00, 1 to 1.29, 1 to 0.78, 1 to 0.64, 1 to 0.50 Zoom: 0.50 to 2.00 (specified by the percent) |
| Reading resolution | 600 x 600 dpi |
| Printing resolution | 600 x 600 dpi |
| Warm-up time | 10.0 seconds or less |
| First print time | 9.0 seconds or less (A4/LTR) |
| Print speed | One-sided: Approximately 22 sheets / minute (A4) Approximately 23 sheets / minute (LTR) Double-sided: Approximately 11 sheets / minutes |
| Cassette paper size | LTR, LGL, A4, B5, A5, Executive, Envelope (COM10, Monarch, DL,ISO-C5), Oficio, Brazil-Oficio, Mexico-Oficio, Folio, Government-LTR, Government-LGL, Foolscap (76 x 127 to 216 x 356 mm) |
| Multifeeder paper size | LTR, LGL, A4, B5, A5, Executive, Envelope (COM10, Monarch, DL,ISO-C5), Oficio, Brazil-Oficio, Mexico-Oficio, Folio, Government-LTR, Government-LGL, Foolscap (76 x 127 to 216 x 356 mm) |
| Cassette paper type | Plain paper (64 to 90g / m ²), thick paper (105 to 128g / m ²), recycled paper (64 to 80g / m ²), transparency, label, envelop, and postcard |
| Multifeeder tray paper type | Plain paper (64 to 90g / m ²), thick paper (105 to 128g / m ²), recycled paper (64 to 80g / m ²), transparency, label, envelop, and postcard |
| Cassette capacity | 250 sheets (80g / m ² paper) |
| Multifeeder tray capacity | 10 sheets (plain paper: 80g / m ² paper) 1 sheet (transparency, envelop) |
| Delivery tray stack | 100 sheets (plain paper: 80g / m ² paper) 50 sheets (thick paper: 91 to 105g / m ² paper) 30 sheets (thick paper: 106 to 128g / m ² paper) 10 sheets (label, transparency, envelop, postcard) |
| Continuous reproduction | 1 to 99 sheets |
| Energy save mode | Yes. (Manual ON / OFF, automatically OFF after a set period of time, automatically ON when receiving facsimile / print data, automatically ON when placing paper on ADF, automatically ON when sending facsimile from PC, automatically ON when NW PULL SCAN, automatically ON when USB SCAN) |
| Network | Yes |
| Operating environment (temperature range) | 15 to 30 degrees C |
| Operating environment (humidity range) | 5 to 90 % |

| | |
|---|---|
| Operating environment (atmospheric pressure) | 0.16 to 1.01 hPa (0.6 to 1 bar) |
| Power supply rating | 120V, or 230V |
| Power consumption (maximum) | Maximum consumption: less than 630W |
| Power consumption | During operation: approximately 440W or less (reference value) At standby: approximately 9.0W (reference value) In sleep mode: approximately 3W (reference value) |
| Ozone | Maximum: less than 0.05 ppm, average: less than 0.02 ppm |
| Dimensions | 390 (W) x 432 (D) x 370 (H) mm (with original pick-up tray) |
| Weight | Approximately 13.4kg (including toner cartridges) |

| 2.2.1 Basic Operation Sequence | 2-1 |

2.1 Construction

2.1.1 Function Configuration

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The functions of this host machine are mainly composed of the 7 blocks: System Control System, Scanning Control System, Printer Control System, Laser Scanner System, Image Formation System, Fixing System, Pickup/Feeding System. Below is the block diagram.

F-2-1

2.2 Basic Sequence

2.2.1 Basic Operation Sequence

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The operations of this host machine are controlled by CPUs of the SCNT PCB within the Reader Controller System and the DCNT PCB within the Engine Control System. The table below shows the purpose of each interval and the outline of the operations of reader unit and the engine from turnon of the power supply to stop of each motor after printing.

T-2-1

| interval name | definition of interval | purpose | remarks |
|-------------------------|--|--|--|
| WAIT (wait) | Interval between turnon of the power supply and the end of the initial drive | To clear the drum surface potential and to execute the cleaning of transfer charging roller | Presence/absence of cartridge is detected during this interval. |
| STBY (standby) | Interval between the end of WAIT or LSTR and input of print command from SCNT PCB, or interval between the end of LSTR and turnoff of power supply | To make the host machine ready for printing | |
| INTR (initial rotation) | Interval between the input of print command from SCNT PCB and turnon of the Cassette pickup solenoid | To stabilize the photosensitive drum as a preparation for printing Also to clean the transfer charging roller | |
| PRINT (print) | Interval between the end of initial rotation and turnoff of the primary high-voltage output | To form an image onto the photosensitive drum based on the video signal input from the SCNT PCB and to transfer the toner image onto media | |
| LSTR (last rotation) | Interval between turnoff of the primary high-voltage output and stop of the main motor | To fully deliver the final sheet printed Also to clean the transfer charging roller | On input of print command from the SCNT PCB, host machine enters INTR immediately after LSTR. However, depending on the conditions shown below, the host machine may not start INTR immediately. -media size -temperature of the fixing assembly |

3.1 Basic Construction

3.1.1 Specifications / Control / Function List

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

T-3-1

| item | function / method |
|-------------------------|--|
| document exposure | LED |
| document scan | Book mode: scan by the shift of the contact Book mode: scan by the shift of the contact sensor (CS) ADF: document stream reading by fixed contact sensor (CS) |
| scanning resolution | 600 dpi (horizontal scanner) X 600 dpi (vertical scanner) |
| number of gradations | 256 gradations |
| magnification | 50% to 200% horizontal: image processing by SCNT PCB vertical: change of carriage shift speed, image processing by SCNT PCB |
| lens | rod lens array |
| CMOS sensor | number of lines: 1 line number of pixels: 5184 pixels as total pixels (5107 pixels as effective pixels) maximum document scanning width: 216 mm |
| CS drive control | drive control by Reader motor (M2) |
| document size detection | none |

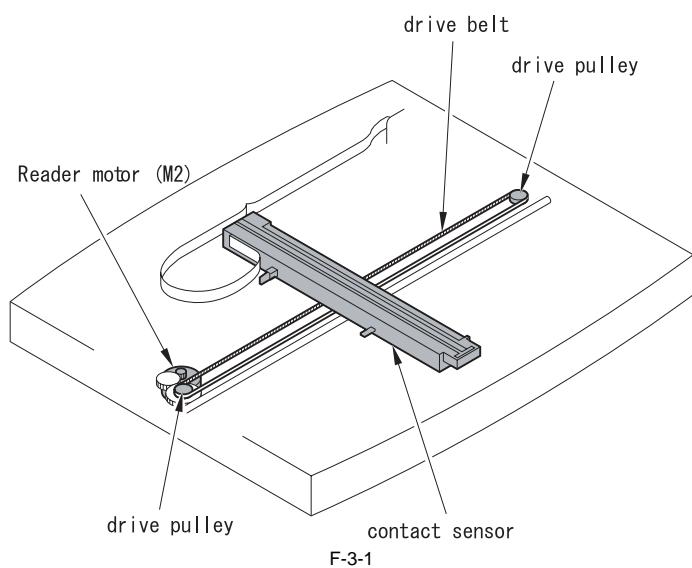

3.1.2 Major Components

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Followings are the major components for Document Exposure System.

- The contact sensor to scan document
- The Reader motor (M2), the drive pulley, the drive belt, to shift the contact sensor

In image scanning control, the contact sensor is shifted by rotating the Reader motor based on the drive signal from the DCNT PCB and scan the original on the copyboard glass. When ADF is in use, image is scanned by feeding the originals by ADF instead of shifting the contact sensor.

3.2 Parts Replacement Procedure

3.2.1 Scanner Unit

3.2.1.1 Preparation for Removing the Scanner Unit

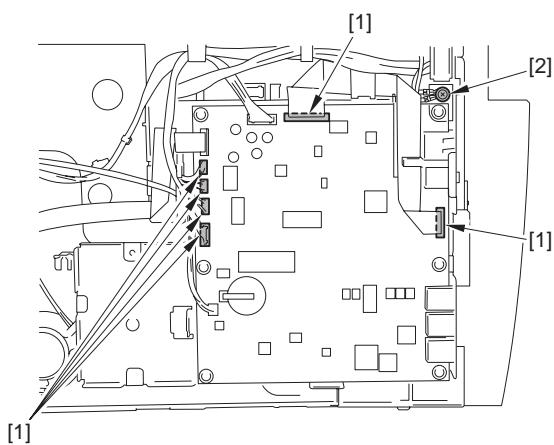

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover. [\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover. [\(page 9-3\)](#) Reference[Removing the Left Cover]
- 4) Remove the rear cover. [\(page 9-2\)](#) Reference[Removing the Rear Cover]

3.2.1.2 Removing the Scanner Unit

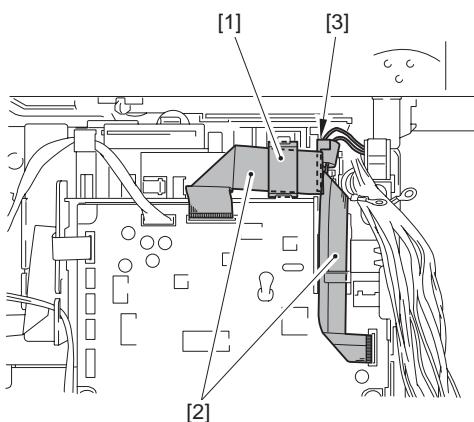

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Disconnect the 6 connectors [1], and remove the 1 screw [2] of the grounding wire.

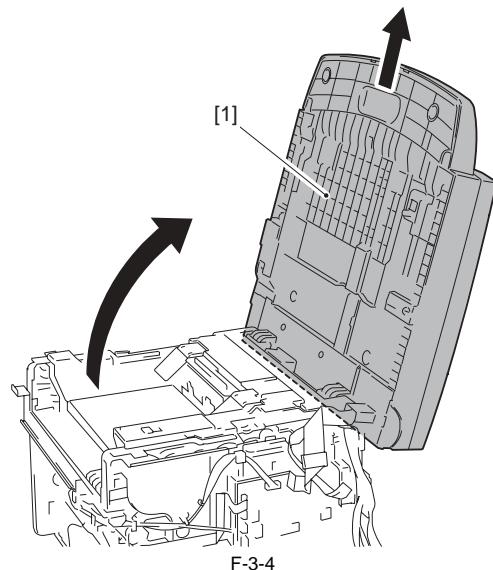

F-3-2

- 2) Remove the ferrite core [1] and the 2 flat cables [2] from the cable guide [3].

F-3-3

- 3) Open the scanner unit [1] to remove in the direction of the arrow.

F-3-4

3.2.2 Reader Motor

3.2.2.1 Preparation for Removing the Flat Bed Motor

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover. [\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover. [\(page 9-3\)](#) Reference[Removing the Left Cover]
- 4) Remove the rear cover. [\(page 9-2\)](#) Reference[Removing the Rear Cover]
- 5) Remove the scanner unit. [\(page 3-3\)](#) Reference[Removing the Scanner Unit]

3.2.2.2 Removing the Flat Bed Motor

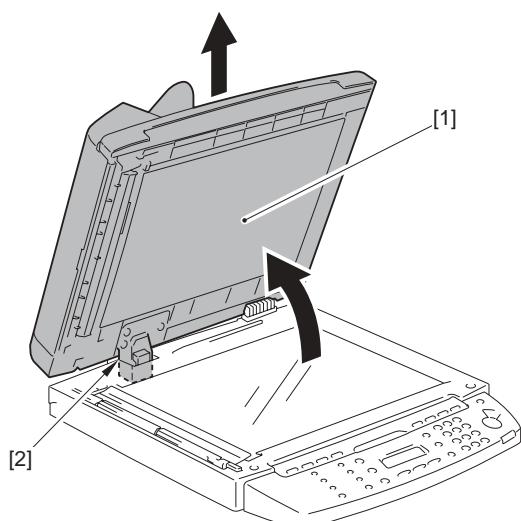

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Open the copyboard cover unit [1] to remove upward. Pull out the hinge [2] on the left side while keeping it tilted toward the back.

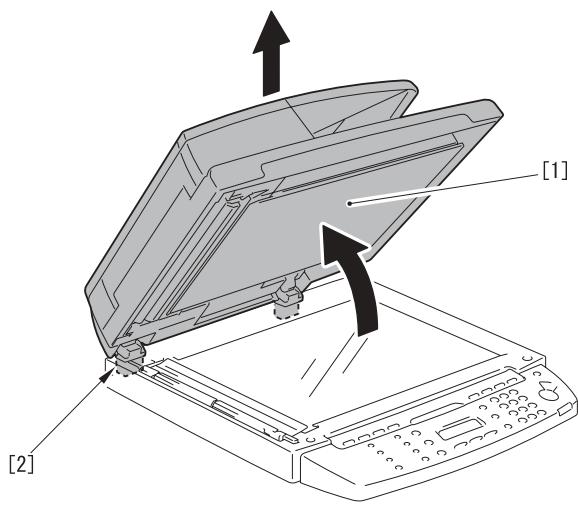

Place the detached copyboard glass cover on cloth etc. not to damage the bottom sheet.

In the case of ADF

F-3-5

In the case of DADF

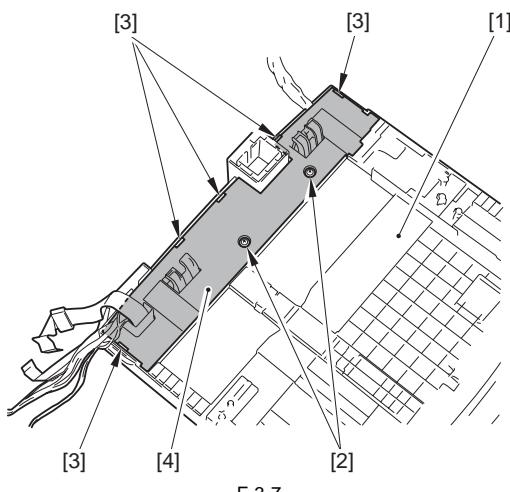

F-3-6

2) Reverse the copyboard [1] and detach the bottom cover [4].

In the case of ADF

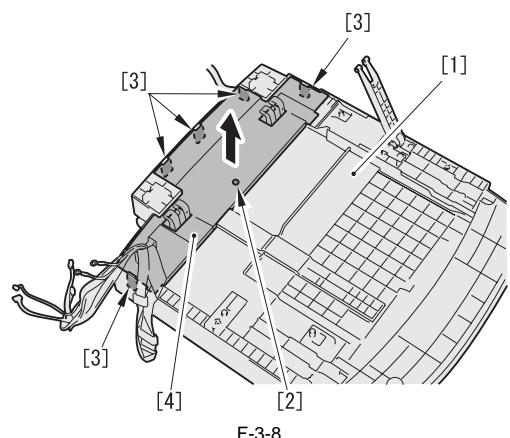

- 2 screws [2]
- 5 claws [3]

F-3-7

In the case of DADF

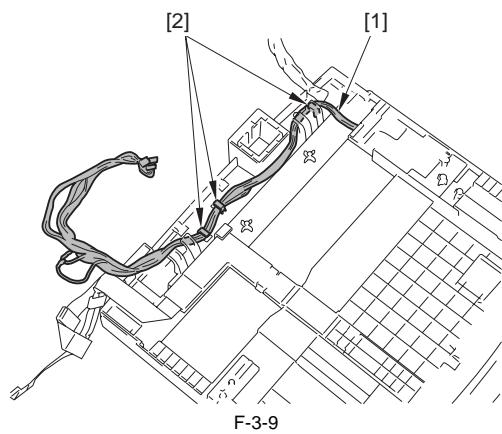

- 1 screws [2]
- 5 claws [3]

F-3-8

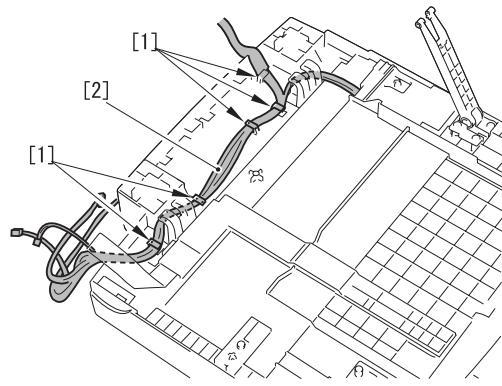

3) Free the cable [1] from the cable guide [2].

In the case of ADF

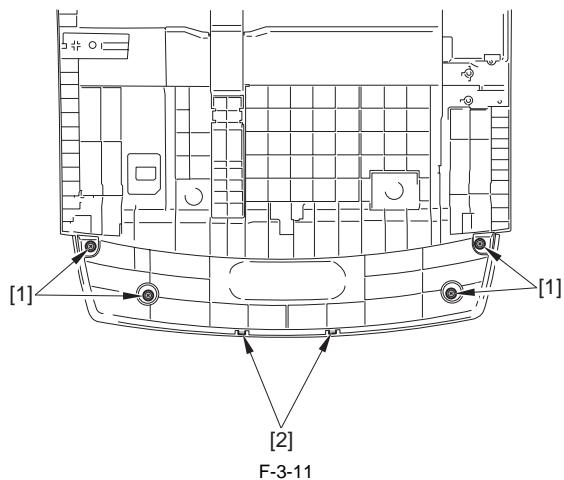

F-3-9

In the case of DADF

F-3-10

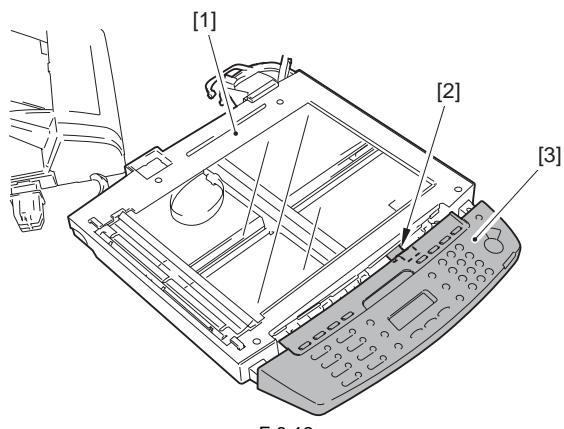

4) Remove the 4 screws and the 2 claws at the back of the control panel unit.

F-3-11

5) Reverse the copyboard [1] again.

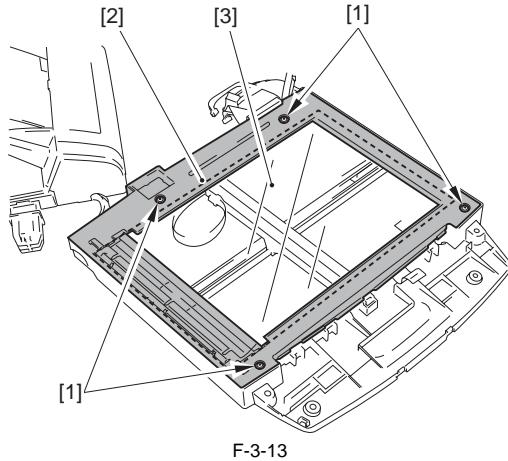

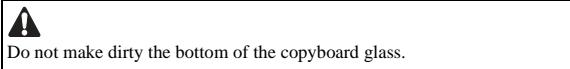

6) Remove the flat cable [2] to remove the control panel unit [3].

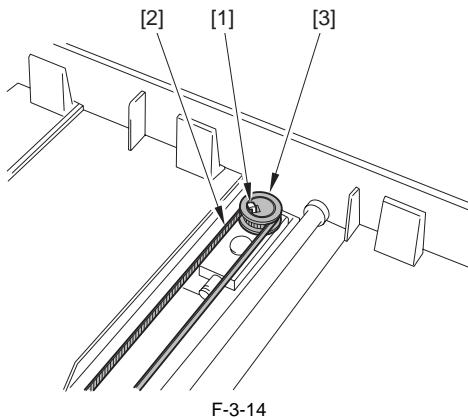

F-3-12

5) Reverse the copyboard [1] again.

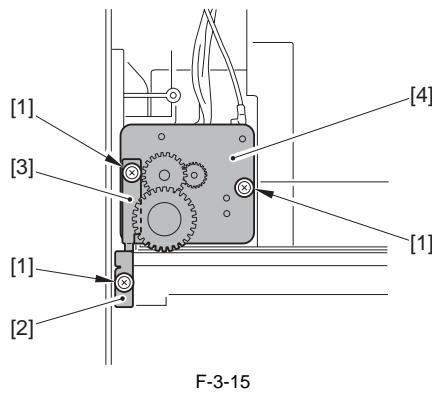

- 6) Remove the flat cable [2] to remove the control panel unit [3].
- 7) Remove the 4 screws [1], and detach the copyboard cover [2].
- 8) Remove the copyboard glass [3].

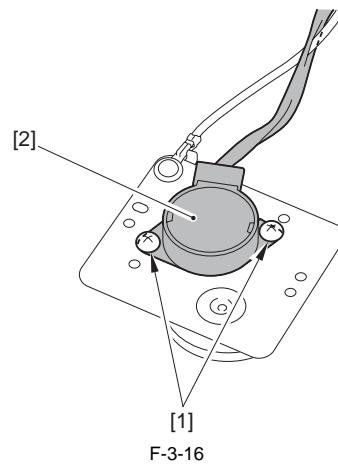

- 9) Remove the claw [1] to remove the gear [3] together with the belt [2].

- 10) Remove the 3 screws [1] to remove the shaft retainer [2], the grounding plate [3] and the motor unit [4].

- 11) Remove the 2 screws [1] to remove the flat bed motor [2].

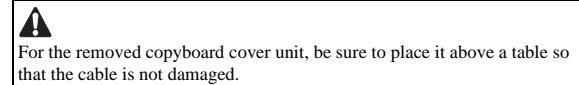

3.2.3 Contact Sensor

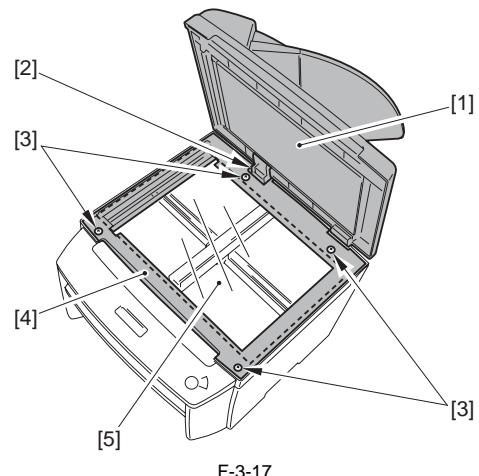

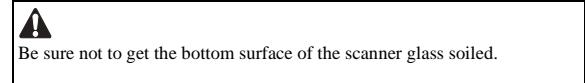

3.2.3.1 Removing the Contact Sensor

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

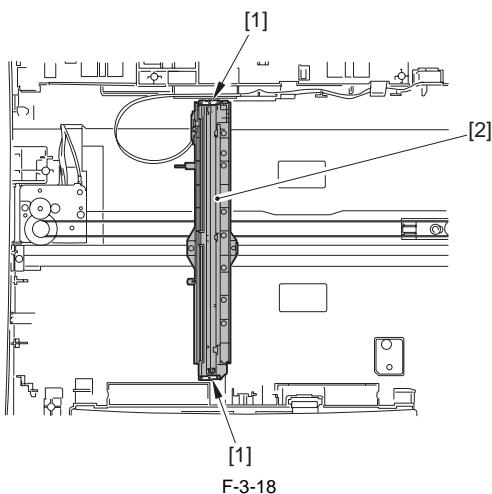

- 1) Open the copyboard cover unit [1] to remove in the direction of the arrow. Pull out the hinge [2] on the left side while tilting it toward the rear side.

- 2) Remove the 4 screws [3], and detach the copyboard glass cover [4].
- 3) Remove the copyboard glass cover [5].

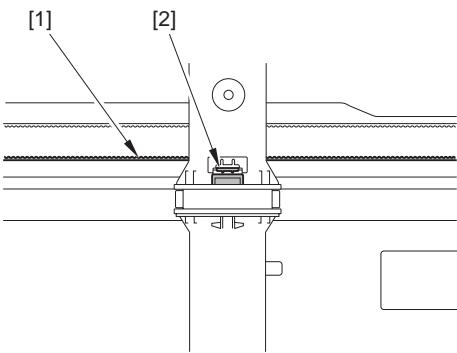

- 4) Remove the 2 spacers [1].
- 5) Remove the contact sensor unit [2] upward.

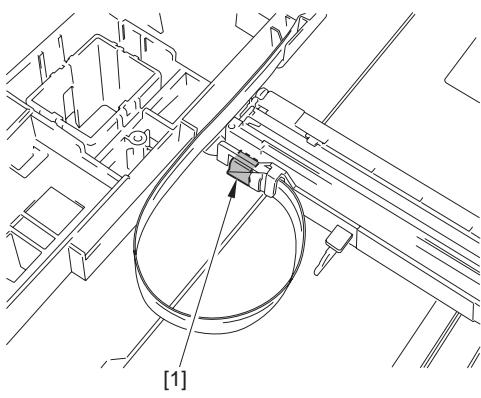

⚠ Points to Note at Attaching

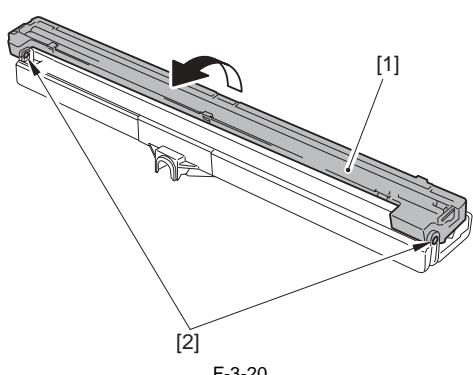

Be sure to fit the gear [1] of the belt with the gear [2] on the bottom surface of the contact sensor unit.

6) Disconnect the connector [1].

7) Turn the contact sensor [1] in the direction shown by the arrow, remove the 2 shafts [2], and then remove the contact sensor [1].

4.1 Basic Operation

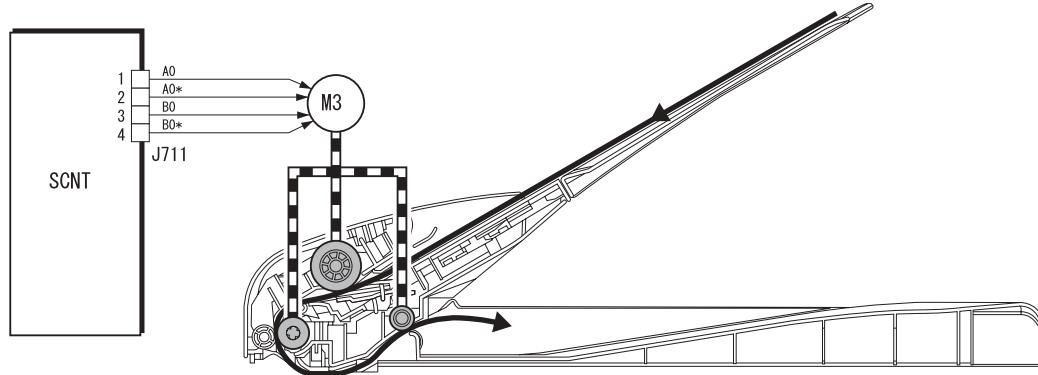

4.1.1 Basic Operation (ADF)

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The Auto Document Feeder (ADF) mounted onto this host machine is dedicated to stream-reading.

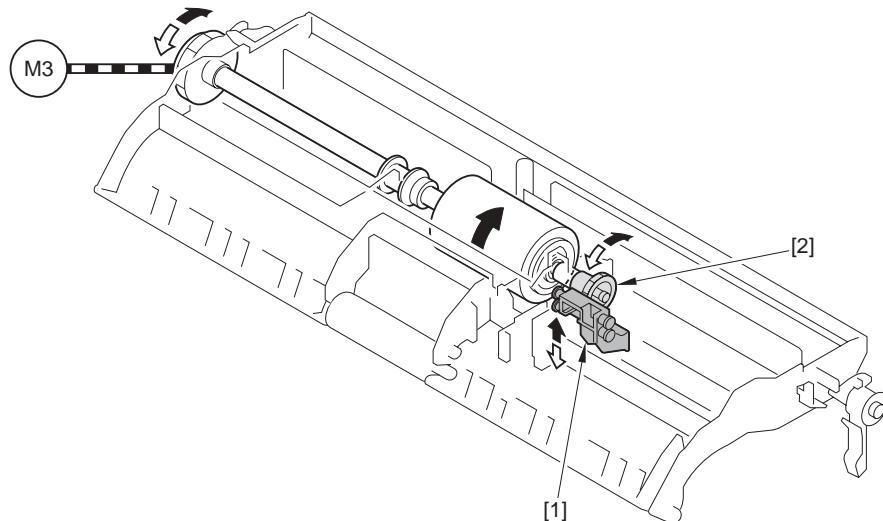

1 motor (ADF motor: M3) is engaged in pickup/feeding/delivery.

At the start of copy/fax/scan, the ADF motor (M3) is driven by the drive command from the SCNT to pickup/feed the originals set face up on the original tray one by one in order from the top. The original is scanned by the contact sensor when moving through the copyboard glass, and then delivered face down to the original delivery assembly.

F-4-1

Within the ADF pickup assembly is the stop [1] for the purpose of preventing the push-in of original, which descends/ascends in conjunction with the gear [2] on the end of the pickup roller shaft.

F-4-2

- When the originals are moving through the machine

By the CW drive of the ADF motor (M3), which is transmitted to the pickup roller via the gear/spring clutch and results in positive rotation of the pickup roller, original pickup is performed. At this point, the gear on the pickup roller shaft rotates positively as well, ascending the stop. When the originals are moving through the equipment, the stop is kept ascended.

- At detection of original being set and after delivery of the last sheet of the original

The gear on the pickup roller shaft rotates negatively by the CCW drive of the ADF motor (M3), descending the stop. At the CCW drive, the drive is not transmitted to the pickup roller via the spring clutch, leaving the pickup roller stopped.

4.1.2 Basic Operation (DADF)

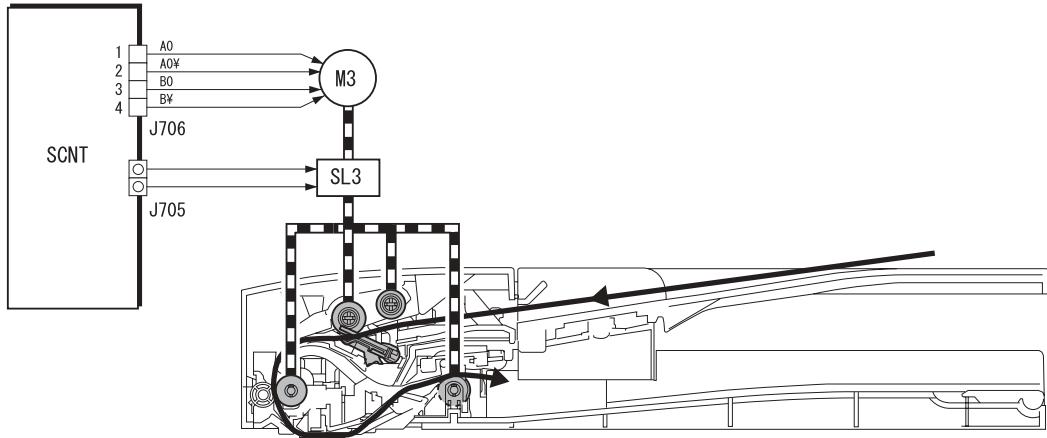

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Pickup/Feed/Delivery Operation

The Auto Document Feeder (ADF) mounted onto this host machine is dedicated to stream-reading.

1 motor (DADF motor: M3) is engaged in pickup/feeding/delivery.

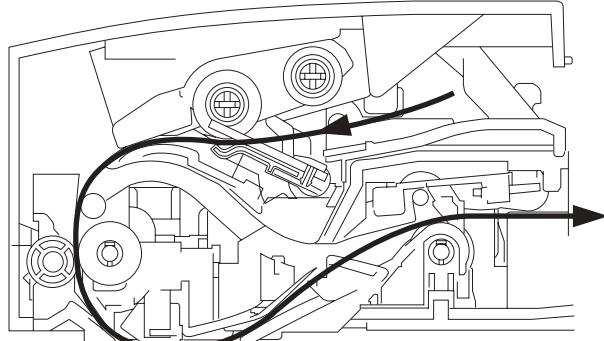

At the start of copy/fax/scan, the DADF motor (M3) is driven by the drive command from the SCNT to pickup/feed the originals set face up on the original tray one by one in order from the top. The original is scanned by the contact sensor when moving through the copyboard glass, and then delivered face down to the original delivery assembly.

F-4-3

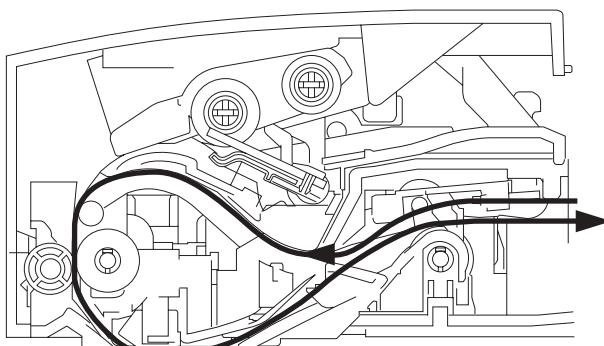

Operation at duplex reading

- Pickup to Reading of the 1st side

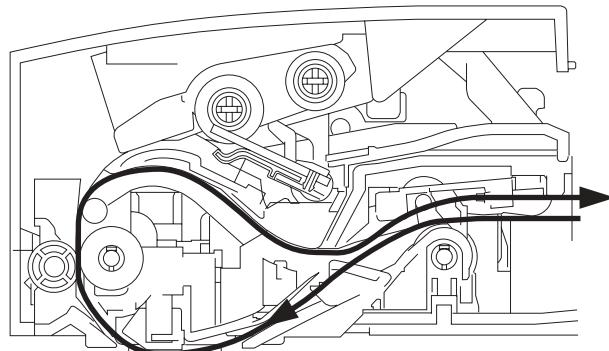

F-4-4

- Reverse to Reading of the 2nd side

F-4-5

- Delivery

F-4-6

4.1.3 Original Detection

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

There are two types of original detection in this equipment.

1. Original Presence / Absence Detection

Detected by DS (Document Sensor: PS106)

Setting the original onto the original tray pushes up the actuator, activating (light shielded => light transmitted) the DS (PS106), and resulting in detection of the presence of original.

2. Detection of the End of the Original

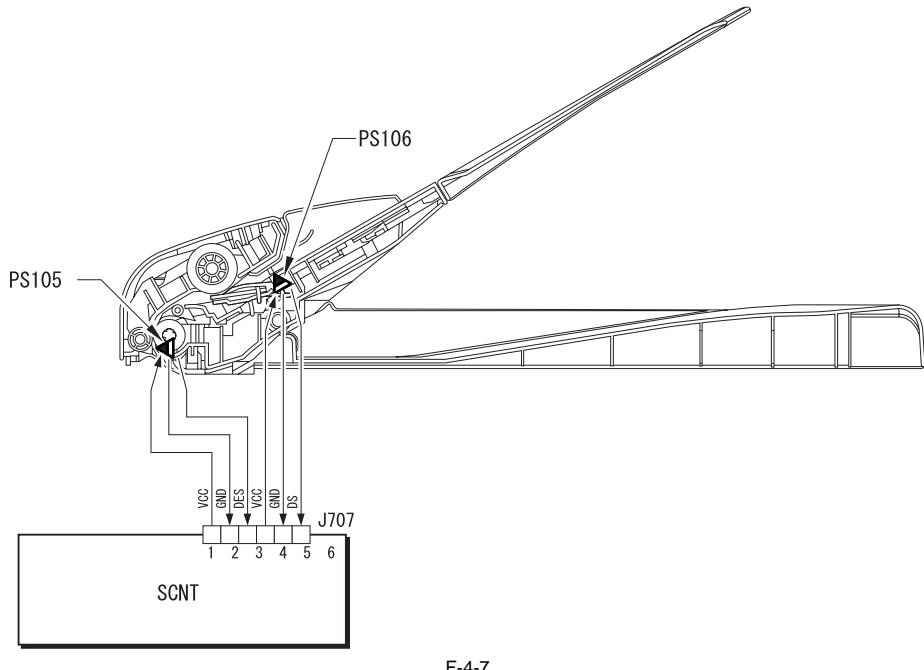

Detected by the DES (Document End Sensor: PS105)

The leading edge of the original that is fed pushes up the actuator, activating the DES (PS105) (light shielded => light transmitted) and resulting in detection of the reach of the leading edge of original. Furthermore, when the trailing edge of the original passes the actuator position, the actuator returns to the original position, inactivating the DES (PS105) (light transmitted => light shielded). The trailing edge of the original is detected by this mechanism. The original length that can be scanned with this equipment is less than 400 mm. Passing of the original longer than this results in jam stop. The original length is calculated by the time it takes from detection of the leading edge of the original to detection of the trailing edge of the original.

MEMO:

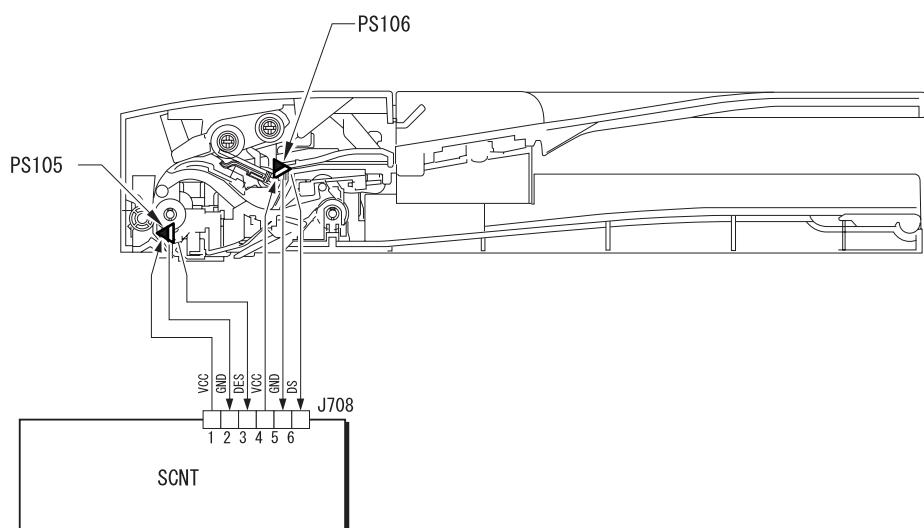

There is no function to detect the original size (original width, length) in this equipment.

In the case of ADF

F-4-7

In the case of DADF

F-4-8

4.2 Detection Jams

4.2.1 Jam Detection

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The following cases are judged as jam.

1. In case of delay in reaching DS/DES or stationary during scanning of original
2. In case DS/DES is detected as ON at power-on (residual paper jam)
3. In case of detecting original of which length is 400 mm or longer

- Operation after Detection of Jam

The host machine stops scanning operation and displays "CHECK DOCUMENT" on the control panel. No jam code is displayed. In case of the model equipped with fax function (with built-in speaker), the warning beep occurs at the detection of jam.

- How to release Jam

Remove the jammed paper and open / close the ADF upper cover

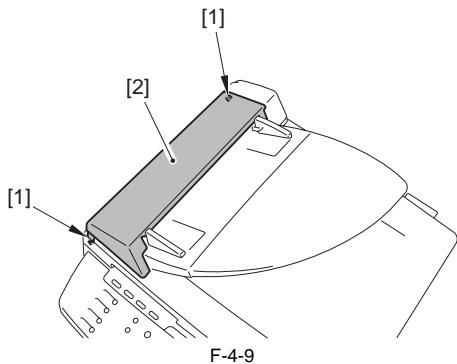

4.3 ADF/DADF

4.3.1 Pick-up Roller

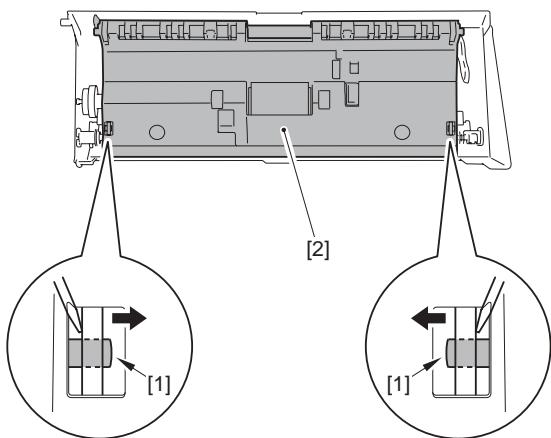

4.3.1.1 Removing the ADF Pickup Roller

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the shaft [1] with a screwdriver to remove the ADF pickup unit [2].

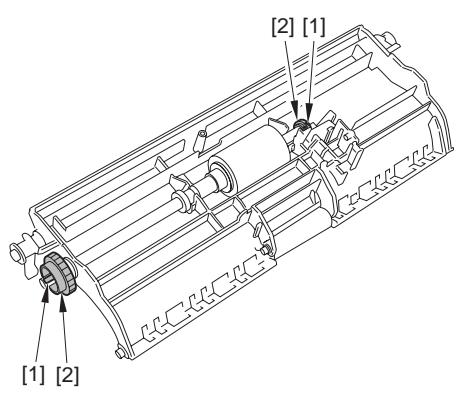

- 2) Remove the 2 shafts [1] with a screwdriver to remove the upper pickup unit [2].

F-4-10

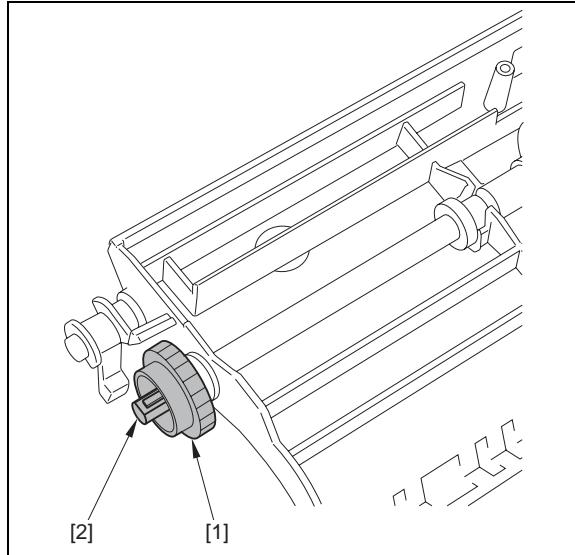

- 3) Remove the 2 claws [1] to remove the 2 gears [2].

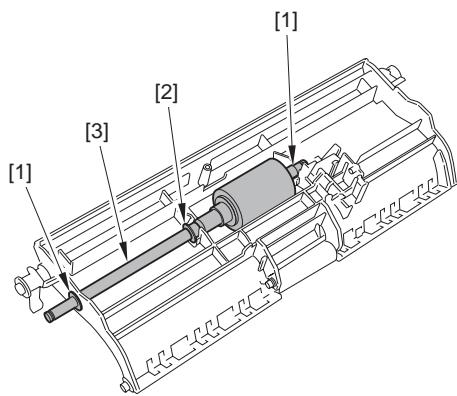

F-4-11

⚠ Points to Note when Attaching

Match the gear [1] with the D cut surface of the ADF pickup roller shaft [2].

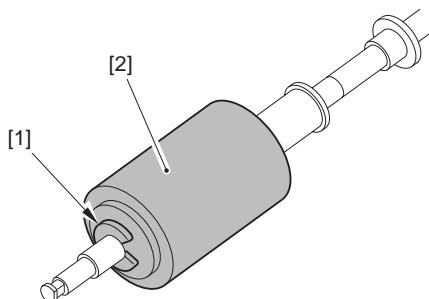

- 4) Remove the 2 bushings [1].
- 5) Remove the 1 E ring [2] to remove the ADF pick-up roller shaft [3].

- 6) Remove the 1 E ring [1] to remove the ADF pickup roller [2].

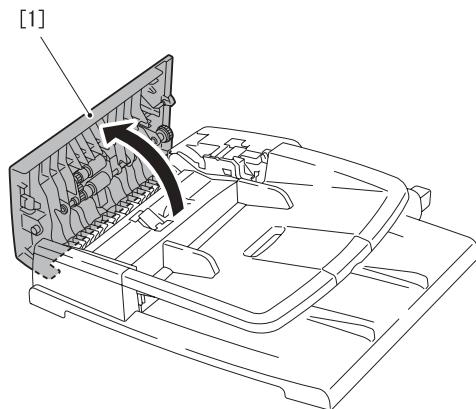

Do not touch the roller with bare hands.

4.3.1.2 Removing the DADF Pickup Roller Unit

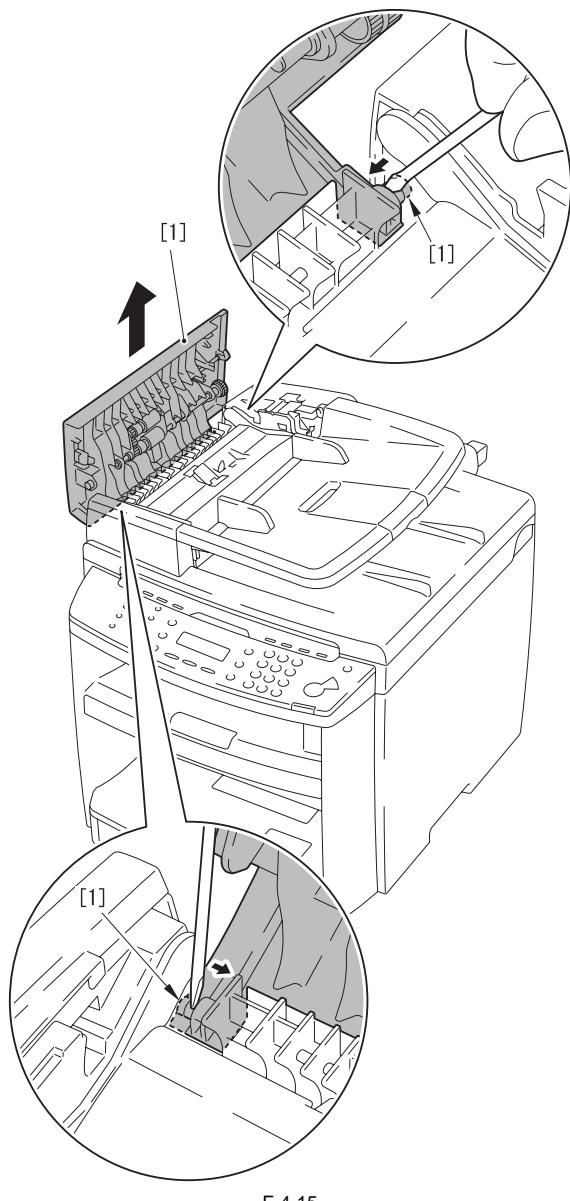

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Open the DADF upper cover [1].

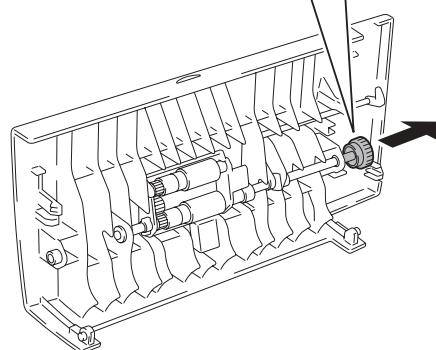

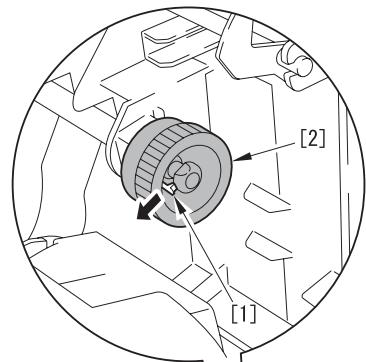

F-4-14

- 2) Remove the DADF upper cover [1].
- 2 bosses [1]

F-4-15

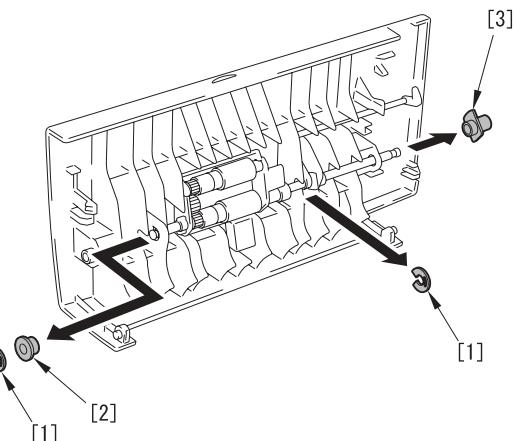

- 3) Unlock one claw [1] and remove one gear [2].

F-4-16

⚠ Points to Note when Attaching
Match the gear [1] with the D cut surface of the DADF pickup roller shaft [2].

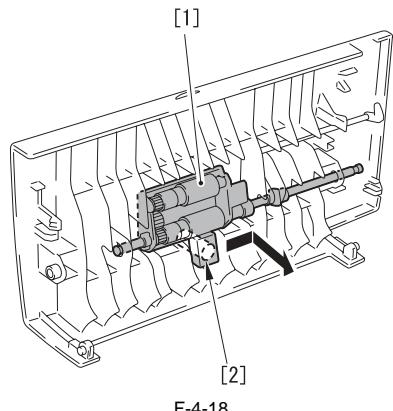

- 4) Remove two E-rings [1], one shaft support [2], and one shaft support [3].

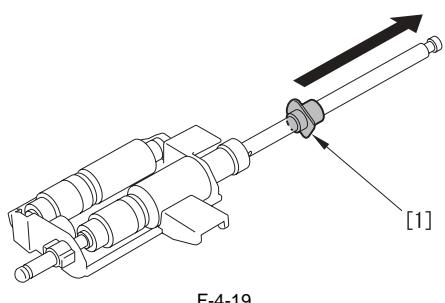

F-4-17

- 5) Move the DADF separation roller unit [1] to the direction shown by an arrow, and remove it from the DADF upper cover.

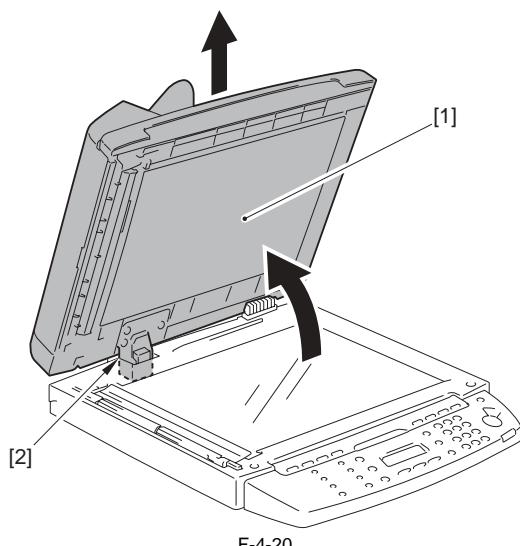

⚠
Do Not lose the spring [2] when removing DADF pickup roller unit.

6) Remove the shaft support [1].

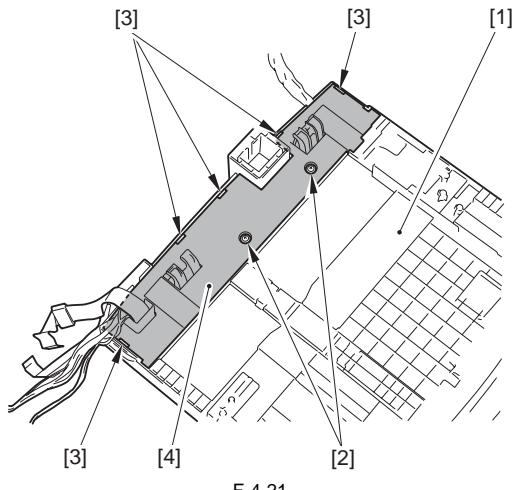

F-4-19

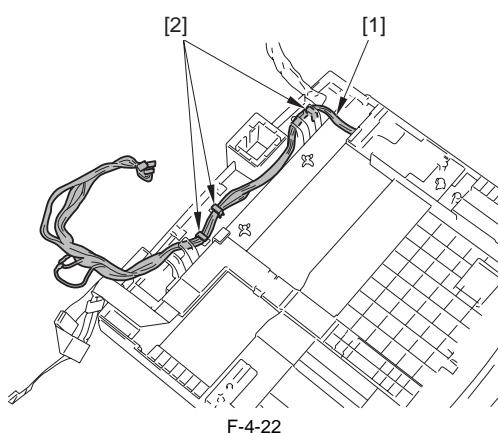

F-4-20

- 2) Turn the copyboard [1] back to detach the bottom cover [4].
 - 2 screws [2]
 - 5 claws [3]

F-4-21

- 3) Free the cable [1] form the cable guide [2].

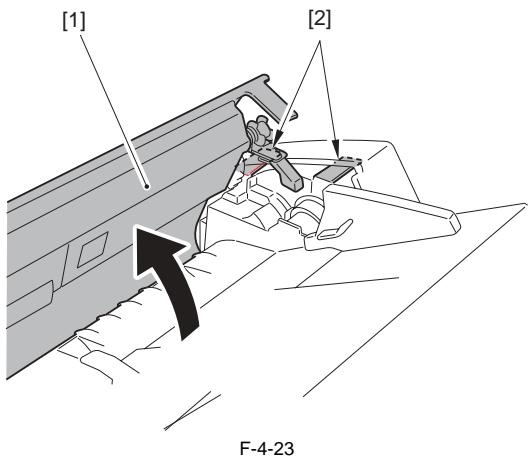

F-4-22

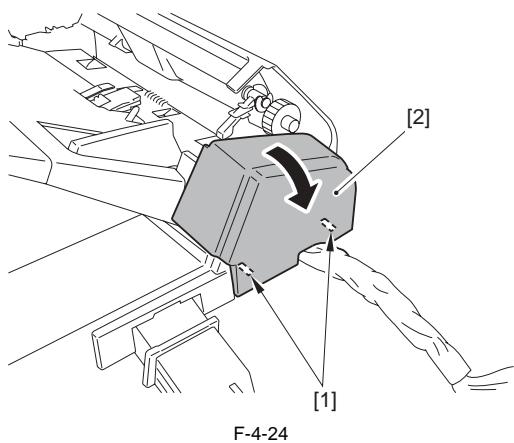

- 4) Open the ADF cover [1] to remove the 2 claws [2].

For the removed copyboard cover unit, be sure to place it on a piece of cloth to avoid damage to the sheet at the bottom.

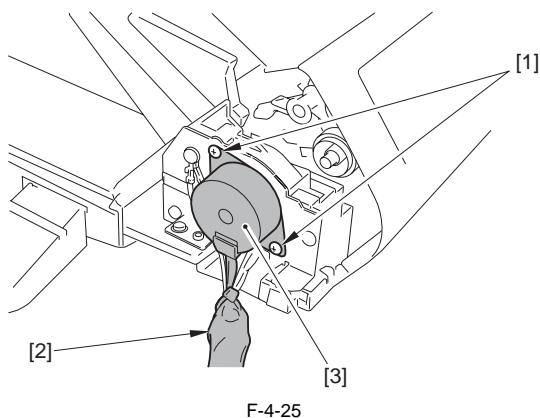

5) Remove the 2 claws [1] to detach the ADF motor cover [2].

6) Remove the ADF motor [3].

- 2 screws [1]
- 1 cable tube [2]

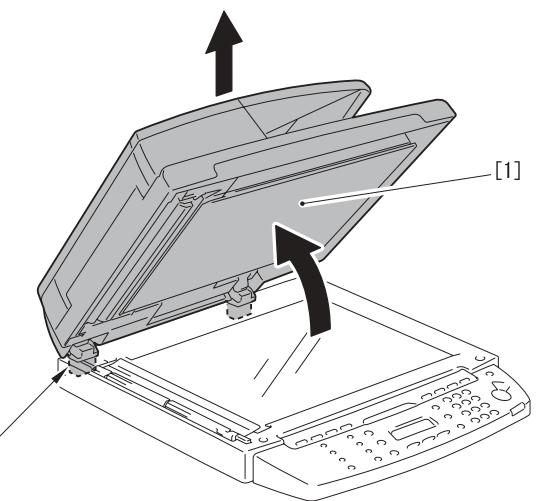

4.3.2.3 Removing the DADF Motor

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

1) Open the copyboard cover unit [1] and remove it in an upward direction. Remove the left-side hinge [2] while lifting it down to the backside.

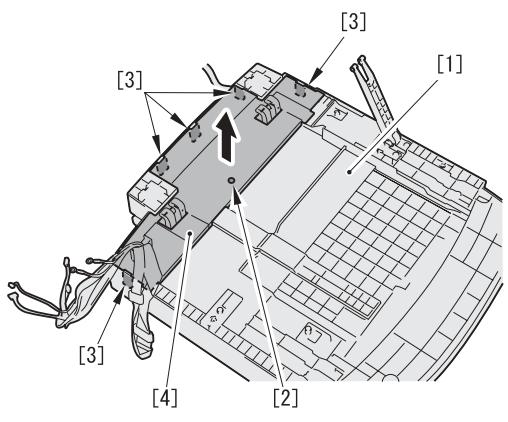

Place the removed copyboard cover unit on a cloth, etc. so that the bottom sheet is not damaged.

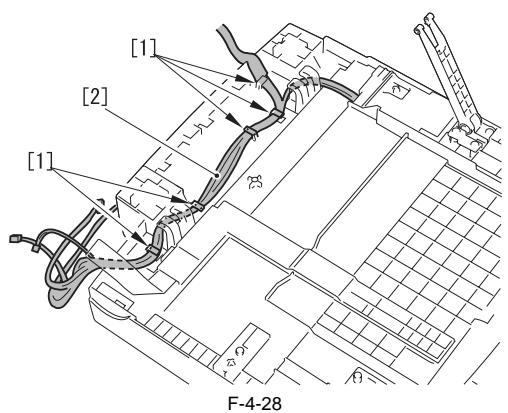

2) Reverse the copyboard [1] and remove the bottom cover [4].

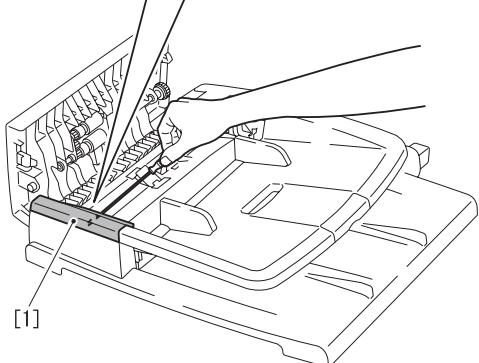

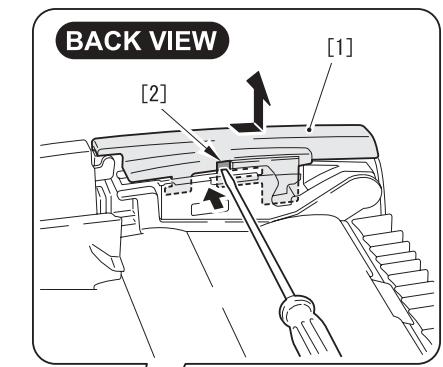

- 1 screw [2]
- 5 claws [3]

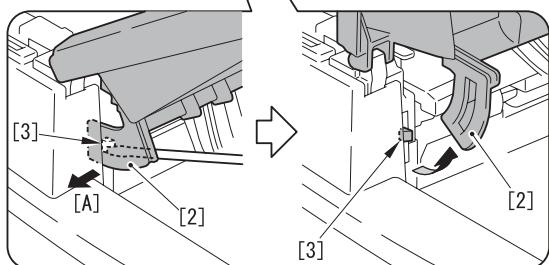

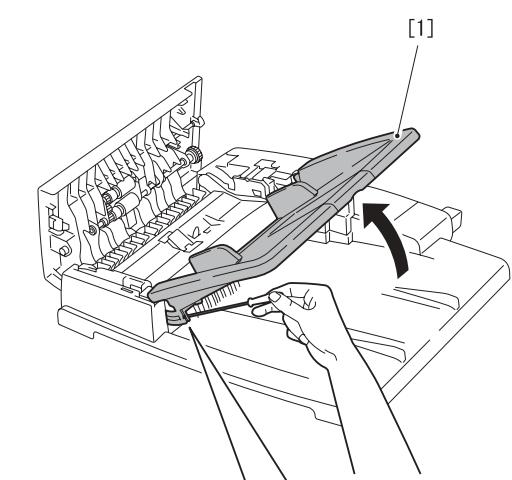

3) Remove the cable [2] from the cable guide [1].

4) Remove the cover [1] in the direction shown by an arrow. - 1 hook [2]

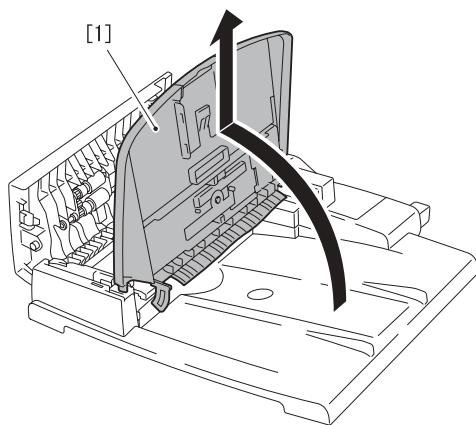

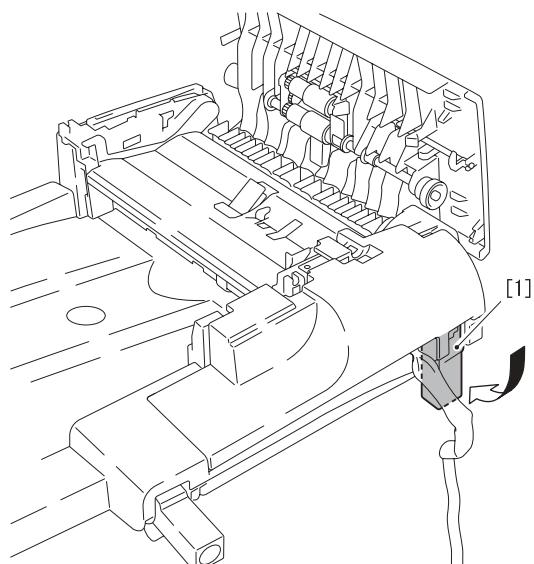

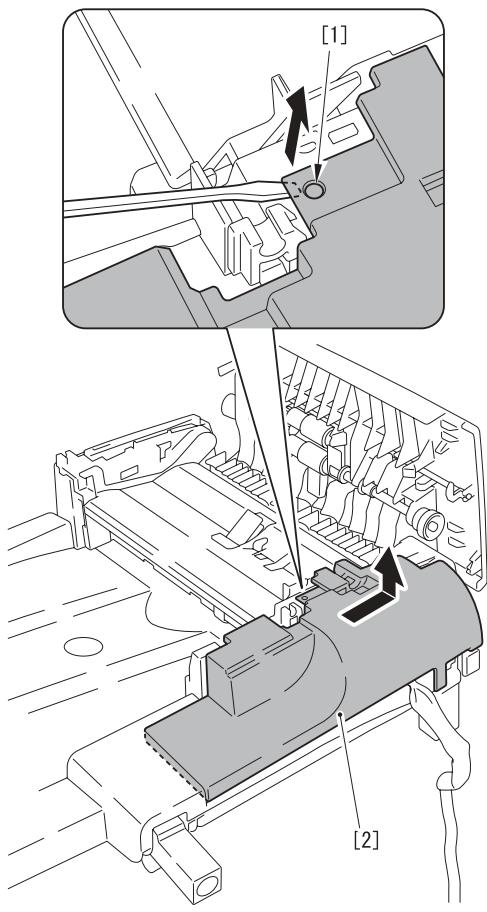

5) Remove the hook [2] from the copyboard pickup tray [1].
- 1 claw [3]

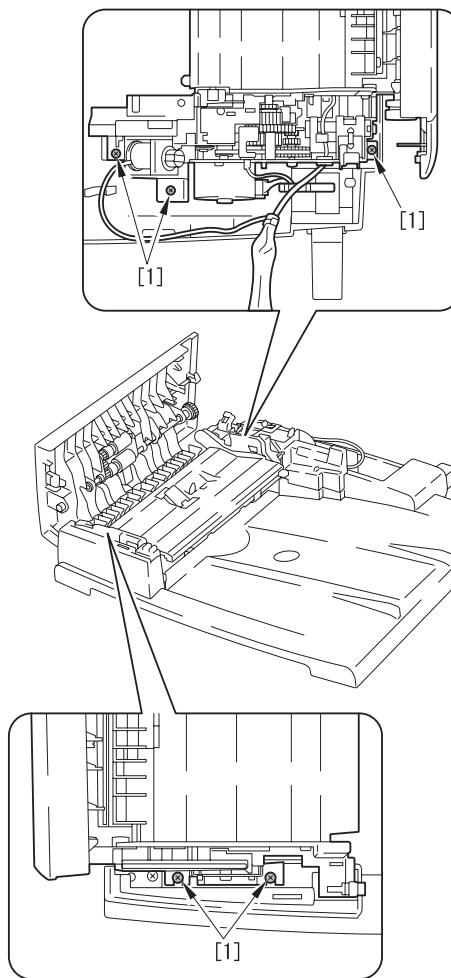

F-4-30

6) Remove the document pickup tray [1] in the direction shown by an arrow.

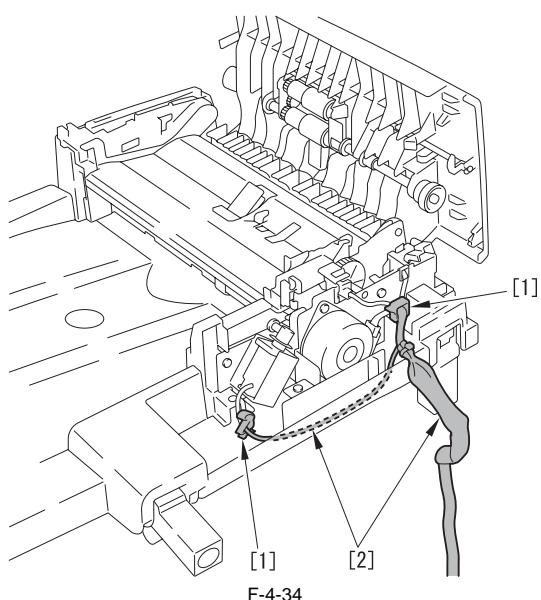

F-4-31
7) Turn down the hinge [1].F-4-32
8) Remove the cover [2] in the direction shown by an arrow.
- 1 boss [1]

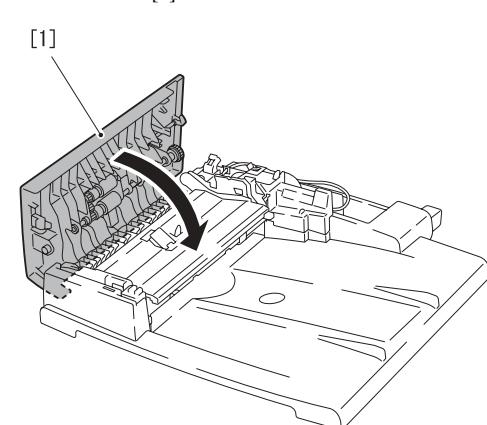

9) Remove the cable [2].
- 2 clamps [1]

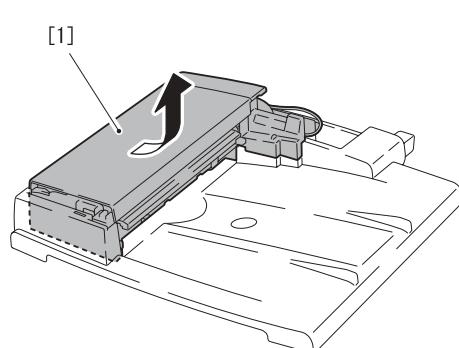

11) Close the ADF cover [1].

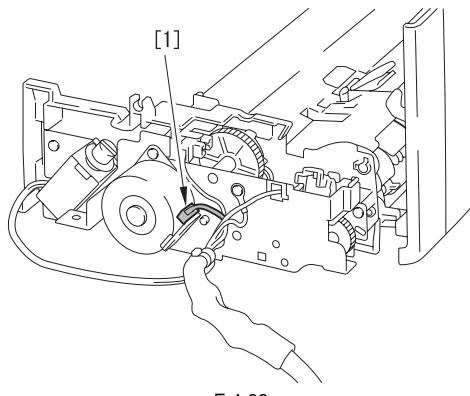

10) Remove five screws [1].

12) Remove the ADF unit [1] in the direction shown by an arrow.

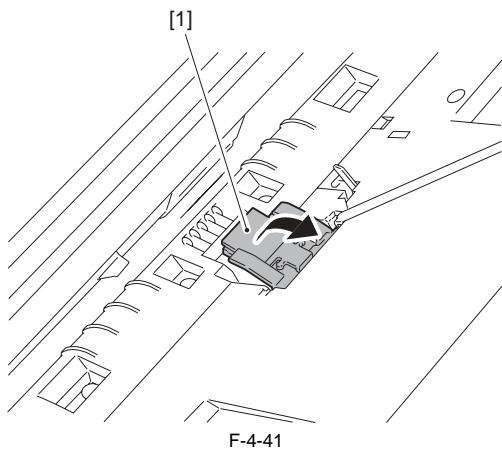

13) Remove the connector [1].

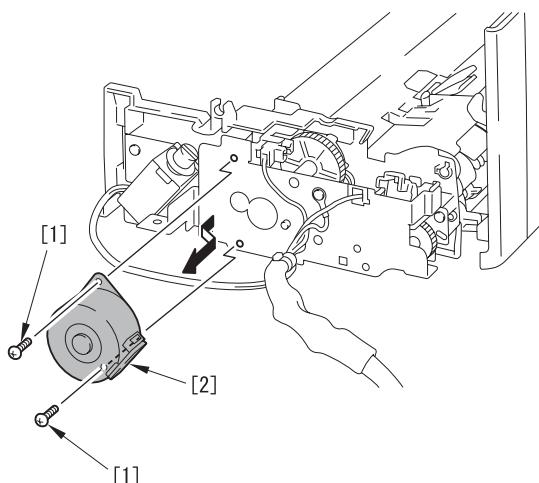

F-4-38

- 14) Remove the DADF motor [2] in the direction shown by an arrow.
- 2 screws [1]

F-4-41

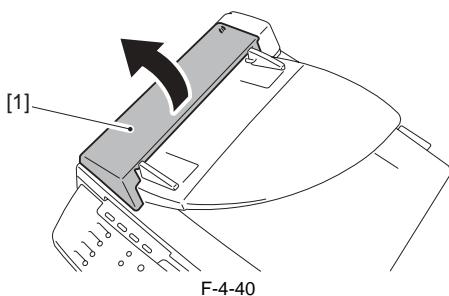

F-4-39

4.3.3 Separation Pad

4.3.3.1 Removing the ADF Separation Pad

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Open the ADF cover [1] in the direction of the arrow.

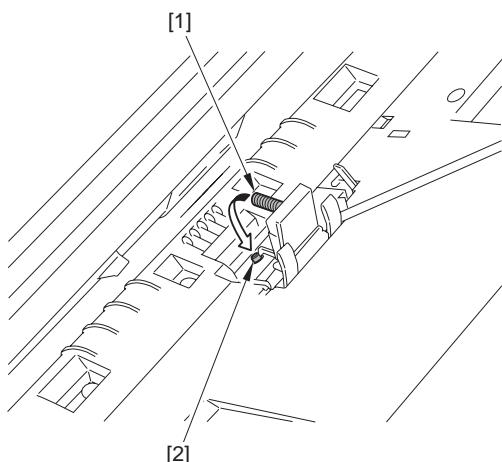

F-4-40

- 2) Remove the separation pad [1] in the direction of the arrow.

⚠ Points to Note when Attaching

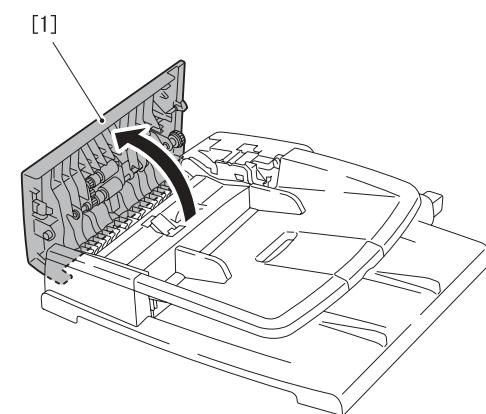

Insert the spring [1] of the separation pad into the boss [2].

4.3.3.2 Removing the DADF Separation Pad

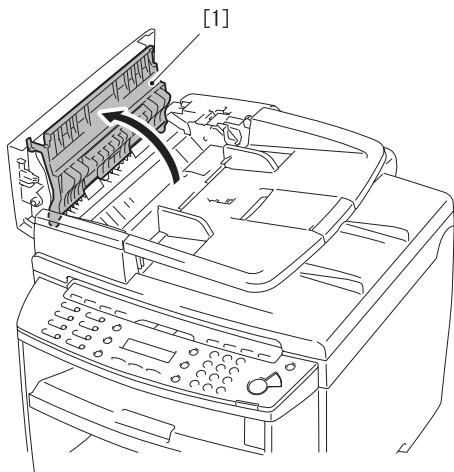

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Open the DADF cover [1] in the direction shown by an arrow.

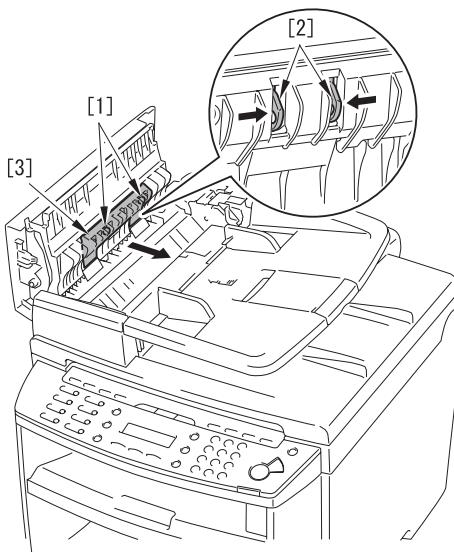

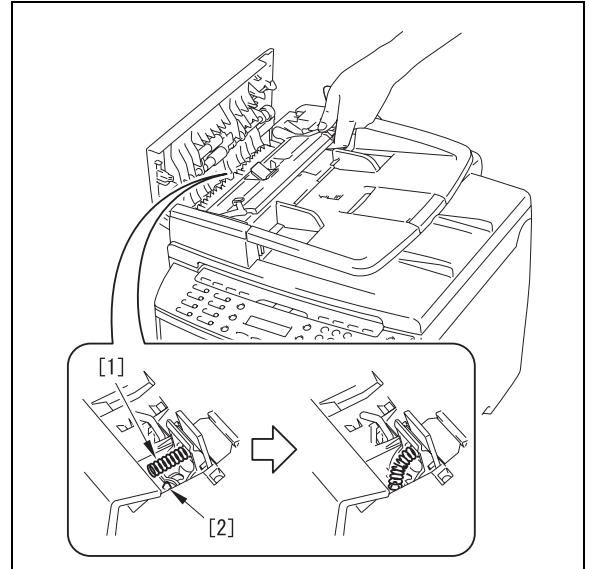

F-4-42

- 2) Open the inner guide [1] in the direction shown by an arrow.

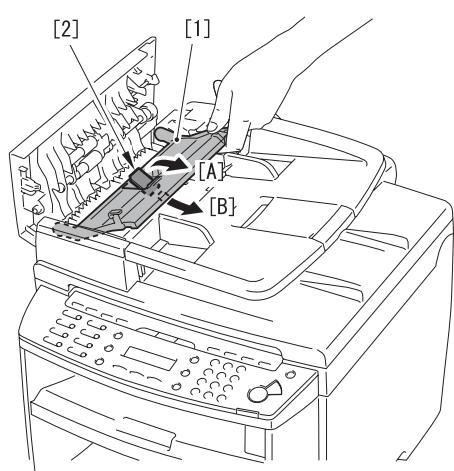

F-4-43

- 3) Remove two screws [1]. Hold the protrusion [2] and remove the separation pad cover [3].

F-4-44

- 4) Move the separation pad [1] in the direction shown by an arrow [A] and then move it in the direction shown by an arrow [B].

F-4-45

Points to Note when Attaching

Insert the spring [1] of the separation pad into the boss [2].

5.1 Overview/Configuration

5.1.1 Overview

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

[1] Laser driver PCB

[5] Scanner motor

[2] BD sensor

[6] Four-surface mirror

[3] Photosensitive drum

[7] Cylindrical lens

[4] Condensing lens

F-5-1

The laser scanner assembly is composed of the laser driver and the scanner motor etc., and controlled by the signal input from the DCNT PCB. The laser driver emits laser diode according to the laser control signal and the video signal from the DCNT PCB.

The laser beam passes the cylindrical lens, and reaches the four-surface mirror rotating at constant speed.

The laser beam reflected by the four-surface mirror passes through the condensing lens placed in front of the four-surface mirror and focuses on the photosensitive drum.

When the four-surface mirror rotates at constant speed, the laser beam on the photosensitive drum scans the photosensitive drum at constant speed.

When the photosensitive drum rotates at constant speed and the laser beam scans the photosensitive drum at constant speed, the latent image is formed on the photosensitive drum.

MEMO:

E100: When the error related to the following laser exposure occurs, error code (E100) is lit.

BD fault

If /BDI signal cannot be detected in 0.1 sec after forced acceleration of the scanner motor or the specified value of /BDI signal cycle cannot be detected for 2 sec or more after the scanner motor reached the specified rotation, it should be judged as BD fault.

Scanner fault

If /BDI signal cannot be detected 1.5 sec after completing forced acceleration of the scanner motor, extend the detection time by 120 sec. If the specified value of /BDI signal cycle cannot be detected during that time, it should be judged as scanner fault.

BD error

If /BDI signal cannot be detected at the specified cycle during /BDI signal output, it should be judged as BD error.
If the case of the following conditions, it should not be judged as BD error.

In the case that door open is detected in 0.2 sec after BD error was detected.

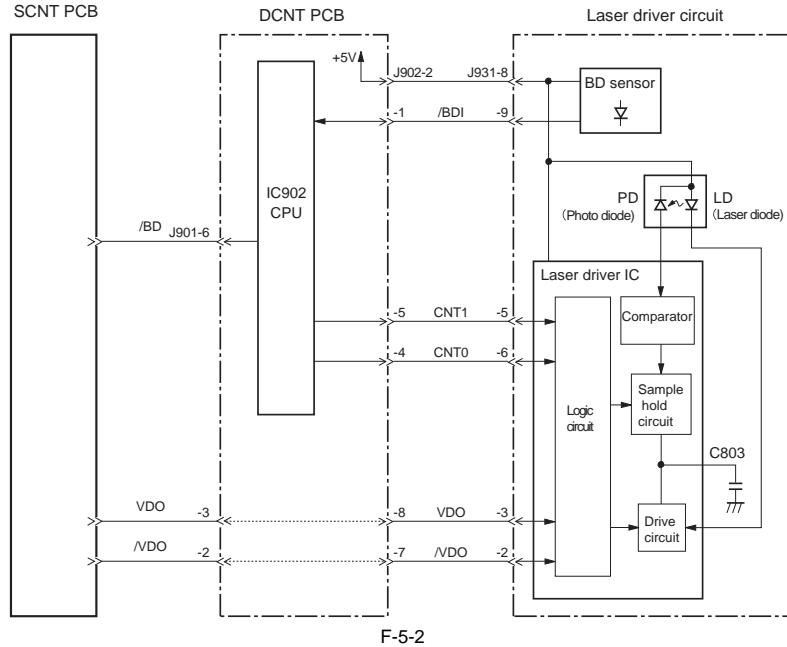

The laser scanner has the components unadjustable in the field. Never disassemble the laser scanner unit.

5.2 Controlling the Laser Activation Timing

5.2.1 Laser ON / OFF Control

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

This is the control where the laser driver turns on / off the laser diode (LD) based on the laser control signal sent from the DCNT PCB. The following is the circuit diagram for laser control.

The DCNT PCB sends the video signal (VDO, /VDO) for image formation and the laser control signal (CNT0, CNT1) for switching the laser operation mode to the logic circuit in the laser driver IC.

The laser driver IC performs laser control based on the combination of CNT0 and CNT1 signals.

The following chart shows the combination of the laser control signals (CNT0, CNT1).

T-5-1

| Operation mode | CNT0 | CNT1 | Remarks |
|--------------------|------|------|------------------------|
| Discharge mode | L | L | Discharge of C803 |
| Print mode | H | L | Use at normal printing |
| LD APC mode | L | H | Use at LD APC |
| LD forced OFF mode | H | H | Use at masking image |

5.3 Controlling the Intensity of Laser Light

5.3.1 Auto Photoelectric Current Control (APC)

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

This is the control to emit the definite level of laser diode.

There are initial APC during initial rotation (note 1) and line space APC during printing (note 2), which are performed in the same procedure. The following is its procedure.

- 1) When the laser control signal (CNT0, CNT1) turned into LD APC mode, the laser driver emits LD forcedly.
- 2) After being detected with the photodiode (PD), the LD emission level as current is converted to the one as voltage and compared with the reference voltage (the voltage equivalent to the target laser level).
- 3) The laser driver controls the laser current until it reaches the voltage of LD target level.
- 4) When the laser control signal turns into LD forced OFF mode, LD is forcedly off and the laser driver converts the adjusted laser level to the voltage of the condenser and keeps it.

Note 1. Initial APC

APC during initial rotation. Laser level is adjusted by APC.

Note 2. Line space APC

APC during printing. Adjustment of laser level for one line is performed before writing one line.

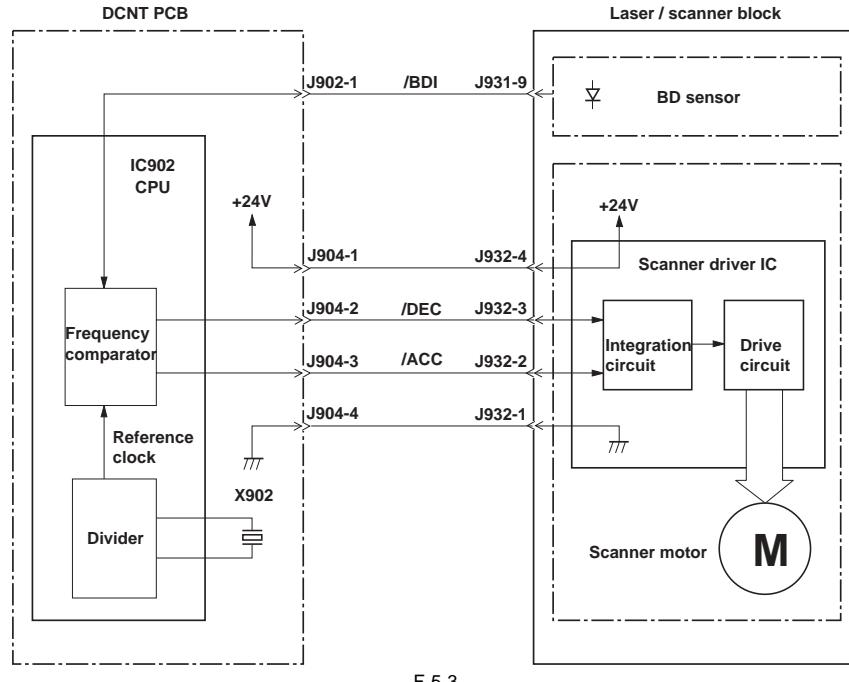

5.4 Controlling the Laser Scanner Motor

5.4.1 Overview

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

This is the control to rotate the scanner motor at constant speed.

The scanner motor is the 3-phase DC brush-less motor with hall element included, and is combined with the drive circuit. The following chart shows the control circuit for the scanner motor.

F-5-3

5.4.2 Scanner Motor Speed Control

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

This is the control to rotate the scanner motor at constant speed.

The following is the procedure of this control.

- 1) At activating the scanner motor, CPU outputs /ACC signal to the scanner driver IC to accelerate the scanner motor forcedly. The scanner motor will start rotating.
- 2) CPU periodically turns on the laser, and compares /BDI signal and the cycle of the reference clock to detect the rotation of the scanner motor.
- 3) When the rotation of the scanner motor exceeds the specified value, CPU outputs /DEC signal to decelerate the scanner motor. CPU controls /ACC or /DEC signal to control the rotation of the scanner motor until it becomes its specified value.

5.4.3 Detection of Fault of the Scanner Motor

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

CPU of the DCNT PCB monitors the frequency comparator to judge if the scanner motor rotates at the specified rotation frequency. When the following statuses occur, CPU judges that there is a fault or error and stops the engine. At the same time, it notices the details of the error to the SCNT PCB.

1) Scanner fault

If /BDI signal cannot be detected 1.5 sec after completing forced acceleration of the scanner motor, extend the detection time by 120sec. If the specified cycle of /BDI signal cannot be detected, it should be judged as scanner fault.

2) BD fault

If /BDI signal cannot be detected in 100msec after forced acceleration of the scanner motor or the specified cycle of /BDI signal cannot be detected for 2 sec or more after the scanner motor reached its specified rotation, it should be judged as BD fault.

3) BD error

If /BDI signal cannot be detected at the specified cycle while CPU outputs /BD signal to the SCNT PCB, it should be judged as BD error. If door open is detected in 200msec after BD error was detected, CPU does not transmit BD error to the SCNT PCB.

5.5 Parts Replacement Procedure

5.5.1 Laser/Scanner Unit

6.1 Overview/Configuration

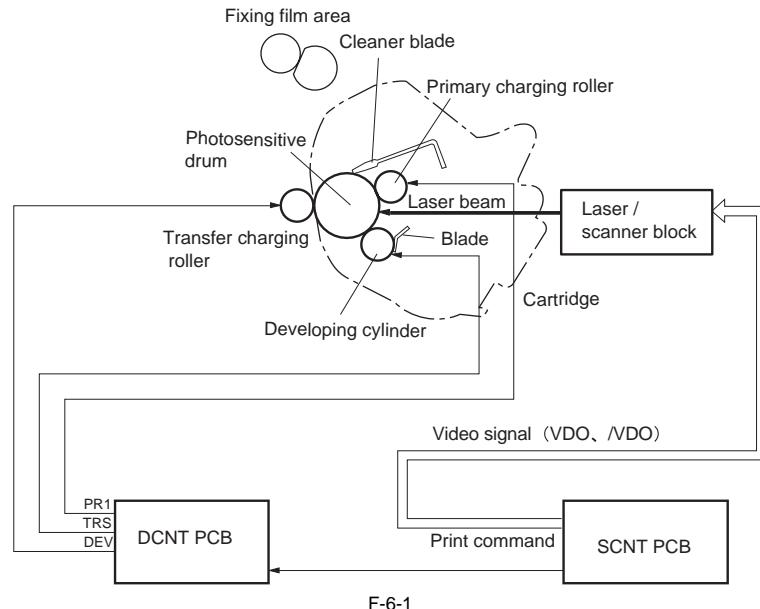

6.1.1 Configuration

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The image forming system is the core part of this machine, and is composed of the cartridge, the transfer charging roller, the fixing assembly, etc. When receiving the print command from the SCNT PCB, the DCNT PCB activates the main motor to rotate the photosensitive drum, the developing cylinder, the primary charging roller, the transfer charging roller and the pressure roller.

The surface of the photosensitive drum is evenly charged negative by the primary charging roller, and the laser beam converted with the video signal (VDO, /VDO) is reflected to the surface of the photosensitive drum to form the latent image by the laser diode.

The latent image formed on the photosensitive drum is turned visible with the toner on the developing cylinder and is transferred on the paper by the transfer charging roller. The transferred toner turns into the permanent image on the paper when the heat and pressure are applied there at the fixing assembly. The cleaner blade removes the residual toner on the surface of the photosensitive drum, whose potential is made even by the primary charging roller to be ready for the formation of the next latent image.

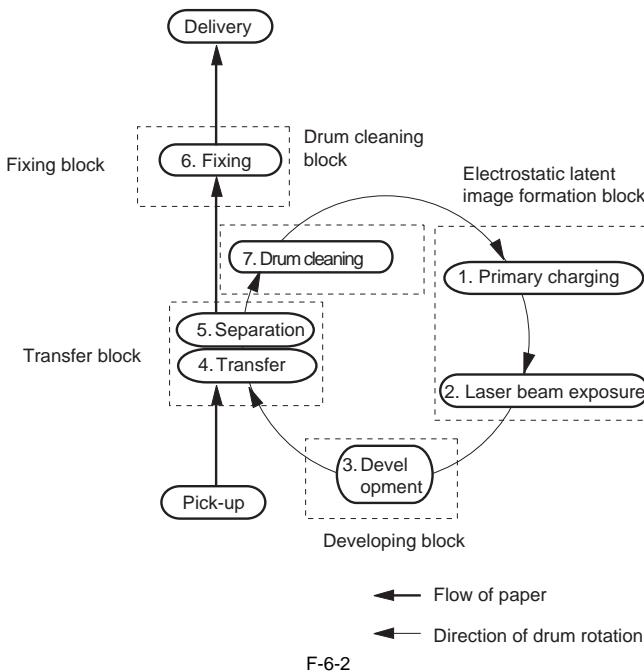

6.1.2 Print Process

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The print process shows the basic operation process for image formation by the printer.

The print process of this machine has the main 5 blocks and 7 steps. The toner image is formed on papers by following the steps of each block. The following is the outline of the blocks and steps of the print process.

1) Electrostatic latent image formation block

Electrostatic images are formed on the photosensitive drum.

Step1: Primary charging (Charges negative potential evenly on the surface of the photosensitive drum)

Step 2: Laser beam exposure (Forms electrostatic images on the photosensitive drum)

2) Developing block

Put the toner on the electrostatic latent image on the surface of the photosensitive drum to visualize

Step 3: Development

3) Transfer block

The toner image on the surface of the photosensitive drum is transferred to papers.

Step 4: Transfer (Transfers the toner on the photosensitive drum to a paper)

Step 5: Separation (Separates the paper from the photosensitive drum)

4) Fixing block

The toner image is fixed on the paper.

Step 6: Fixing

5) Drum cleaning block

The residual toner on the photosensitive drum is removed.

Step 7: Drum cleaning (Removes the residual toner on the photosensitive drum)

6.2 Driving and Controlling the High-Voltage System

6.2.1 Generation of Transfer Charging Bias

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The transfer charging bias (TRS) is output to transfer the toner on the photosensitive drum to papers.

There are transfer charging DC positive bias and transfer charging DC negative bias generated at the transfer charging bias generation circuit in the high-voltage power supply circuit. The transfer charging DC positive bias is output to the transfer charging roller at transferring the toner. The transfer charging DC negative bias is applied to the transfer charging roller at cleaning the transfer charging roller.

The transfer charging bias generation circuit applies these transfer charging biases to the transfer charging roller according to each print sequence.

The following are the biases for print sequences.

- Cleaning bias:

This is the bias for transferring the toner on the photosensitive drum to the paper at the time of print sequence. The transfer charging DC positive bias is applied to the transfer charging roller.

- Sheet-to-sheet bias:

This is the bias to prevent the residual toner on the photosensitive drum from being attracted to the transfer charging roller, at between sheets during continuous printing. Faint transfer charging DC positive bias is applied to the transfer charging roller.

- Cleaning bias:

This is the bias to return the residual toner on the transfer charging roller to the photosensitive drum at the time of warm-up or last rotation sequence. The transfer charging DC negative bias is applied to the transfer charging roller.

The transfer charging DC positive bias is changed due to the instruction of the DCNT PCB. To realize appropriate transfer density, the DCNT PCB changes the voltage of the transfer charging DC positive bias for constant current control according to the transfer current feedback signal (TRCRNT) sent from the transfer charging bias generation circuit.

6.3 Toner Cartridge

6.3.1 Toner Level Detection

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Overview

The toner sensor (magnetic sensor) detects the remaining toner level.

When a toner cartridge is inserted, the toner sensor becomes in contact with the lower part of the cartridge and converts the magnetic force change in the cartridge filled with the toner into voltage.

The MPU of the DCNT PCB compares this output voltage of the toner sensor with the reference value, and detects the toner level.

If the toner level comes near approx.100 sheets (standard original), the following message is shown on the display.

When the toner cover is open, the message will disappear.

[TONER LOW

PREPARE NEW TONER]

 If the toner cartridge is not exchanged, the message is shown again when the toner cover is closed.

Toner detection sequence

Detection is performed per 2.16 sec after 550 ms passing since the main motor was activated. The CPU of the DCNT PCB compares the output voltage of the toner sensor with the reference value.

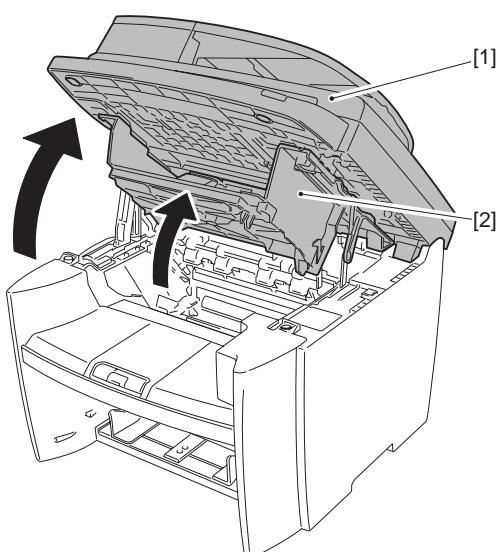

At initialize rotation after power-on and opening/closing the toner cover, it is detected once at 4.32 sec.

6.4 Parts Replacement Procedure

6.4.1 Transfer Charging Roller

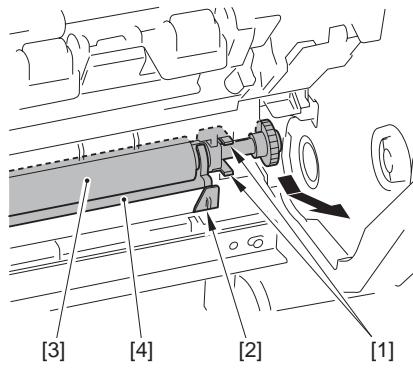

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Open the control panel assembly [1].
- 2) Open the printer cover [2].

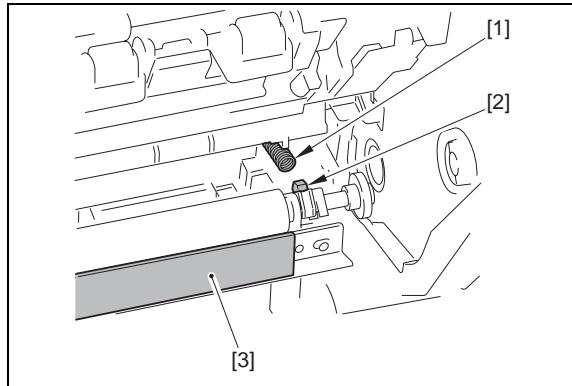

F-6-3

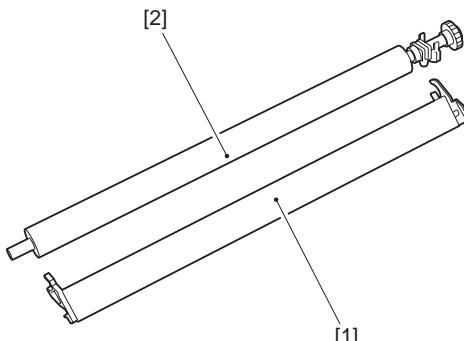

- 3) Unhook the 2 claws [1] and the claw [2] to remove the transfer charging roller [3] with the transfer guide [4] in the direction of the arrow.

F-6-4

- 4) Remove the transfer charging roller [2] from the transfer guide [1].

F-6-5

Do not touch the roller with bare hands.

Points to Note when Attaching

- Insert the spring [1] into the boss [2] of the bushing.
- Push in the transfer guide [3] until it stops.

7.1 Overview/Configuration

7.1.1 Overview

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

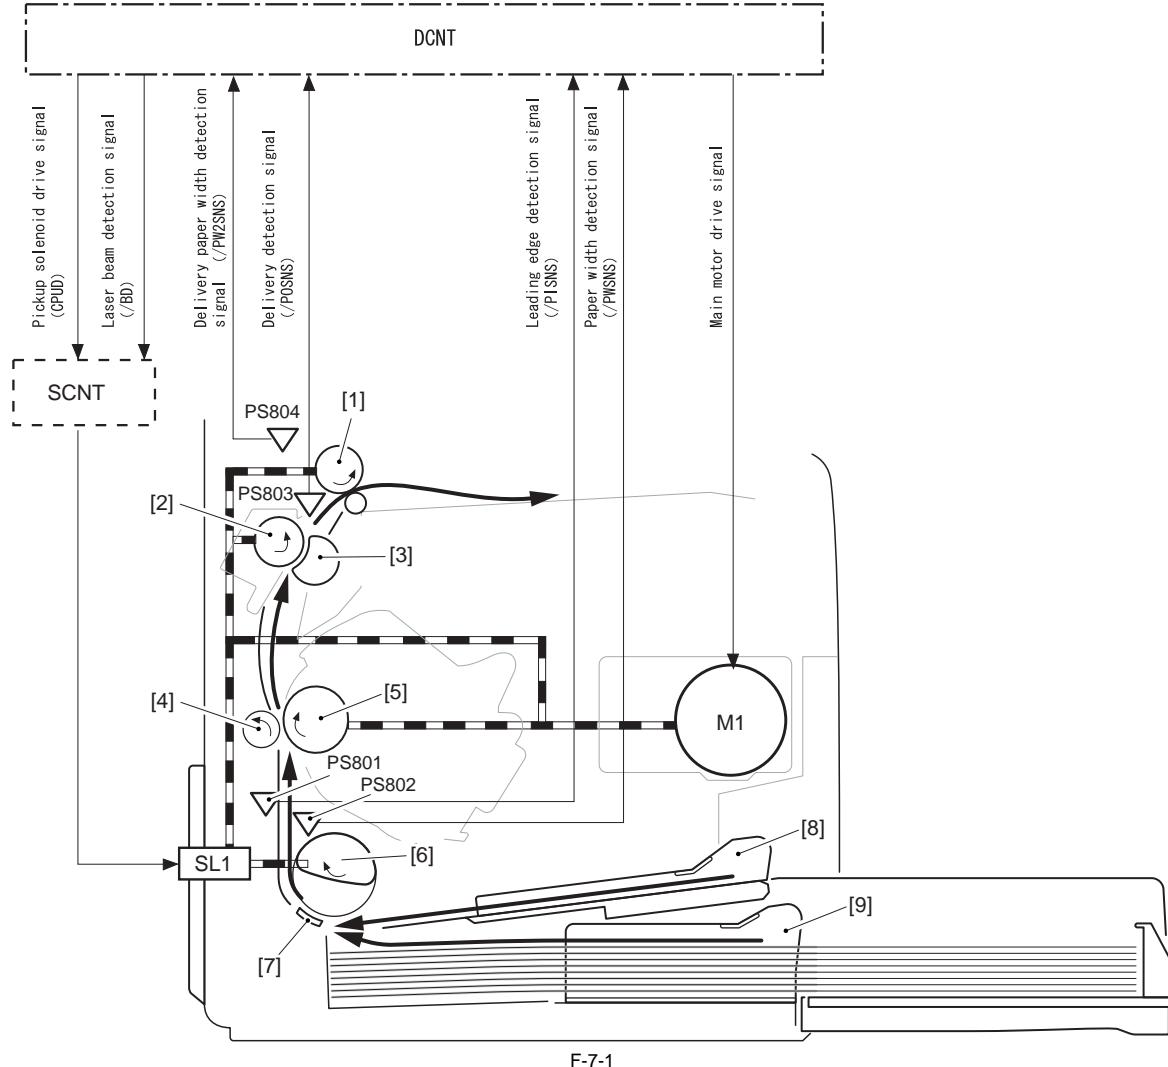

The pickup/feeding system is the part to pickup and feed a paper, and it is composed of the main motor, solenoid, and various motors. In this machine, a paper is picked up from either the pickup tray or the manual feed tray, and it is delivered from the delivery tray.

A paper set in either the pickup tray or the manual feed tray is picked up with the same pickup roller. Then, it is fed to the photosensitive drum, transfer charging roller, fixing film, pressure roller, and face-down delivery roller, in that order, and is delivered to the delivery tray.

On the feed path of a paper, the following 4 photointerrupters are allocated: the leading edge sensor (PS801), paper width/cartridge detect sensor (PS802), delivery sensor (PS803), and delivery paper width sensor (PS804), and they detect either the arrival or passage of paper.

If a paper does not arrive or pass each sensor, except the fixing paper width sensor, within the predetermined time, CPU on the DCNT PCB judges as a jam and notify the occurrence of jam to the SCNT PCB.

The diagrammatic illustration for each motor, solenoid, and sensor is shown below.

7.2 Other Control

7.2.1 Overview

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Pickup/Feed Operation

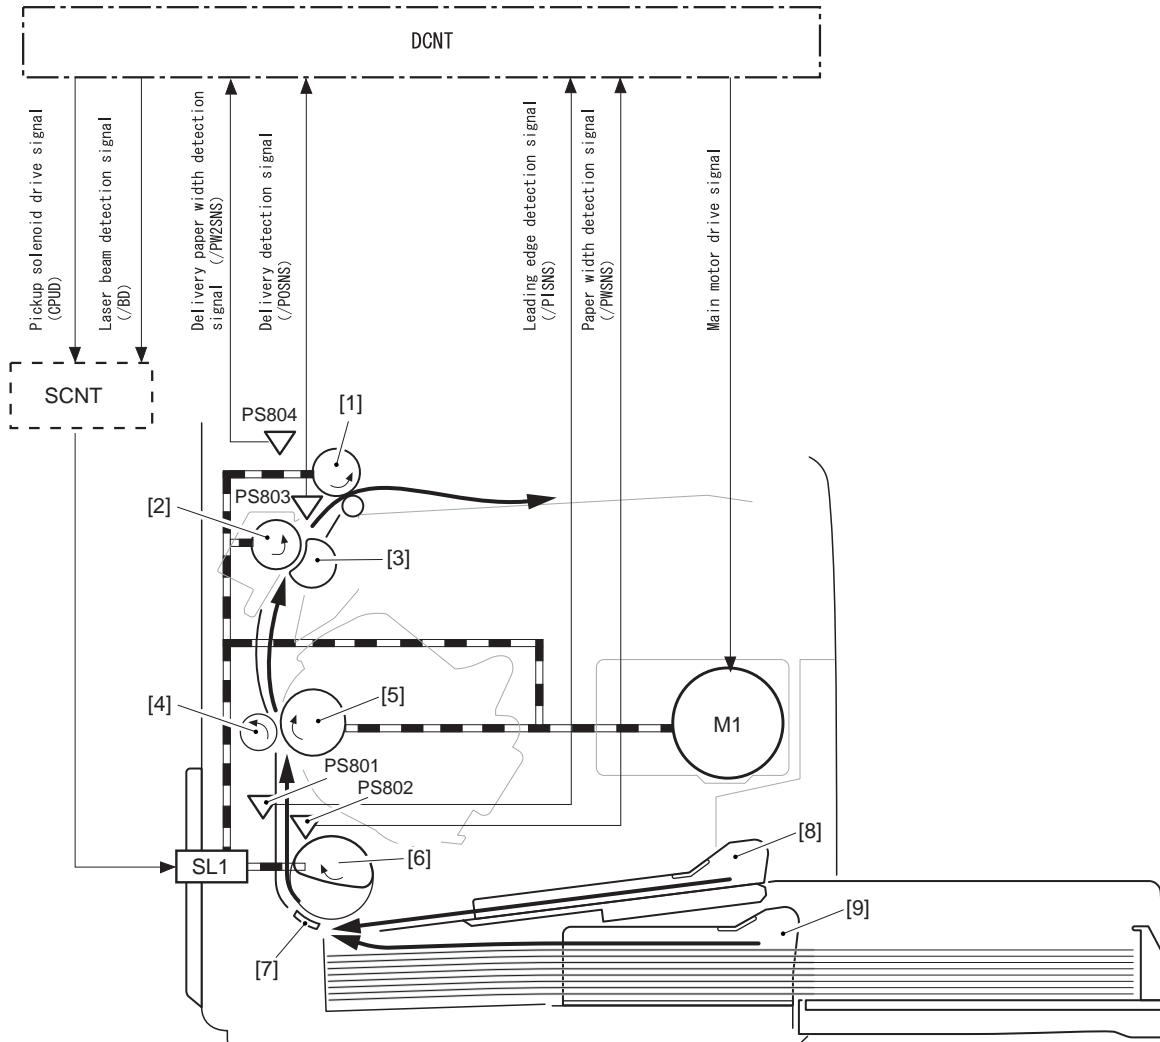

The pickup/feed assembly is the mechanism to pickup and feed paper one at a time from the pickup tray or the manual feed tray. The pickup/feed operation of the machine is explained below.

- 1) Right after the DCNT PCB receives a print command from the SCNT PCB, it rotates the main motor (M1). By doing so, other rollers, except the Cassette pickup solenoid, start to rotate.
- 2) When it becomes initial rotation ready state, the pickup solenoid (SL1) turns ON for about 0.2 sec. As a result of that, the rotation of the main motor is transferred and the pickup roller starts to rotate.

Initial Rotation Ready

It indicates the following state: the main motor drives, and after a certain period of time, the temperature of the fixing assembly reaches to the specified value and the scanner motor reaches to the specified number of rotation.

- 3) The pickup cam rotates along with the rotation of the pickup roller, and by following the shape of the pickup cam, the lifting plate is pushed up with the force of the spring. A paper pushed up with the lifting plate is picked up by the rotation of the pickup roller and fed to inside of the machine.
- 4) After a certain period of time that the leading edge sensor (PS801) detects the leading edge of picked up paper, the DCNT PCB transmits the laser beam detection signal (/BD) to the SCNT PCB.
- 5) Based on the /BD signal, the SCNT PCB transmits the video signal to the laser/scanner assembly and an image is formed on the photosensitive drum. Because of that, it is controlled to match the leading edges of an image and a paper.
- 6) A paper is delivered to the delivery tray with the rotation of the photosensitive drum, pressure roller, and face-down delivery roller.

7.3 Detection Jams

7.3.1 Jam Detection Outline

7.3.1.1 Overview

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The machine has the following paper sensors to detect the presence/absence of paper at the time of startup, opening the door, or feeding a paper, as well as to detect whether a paper is fed normally.

1. Leading edge sensor (PS801)
2. Paper width/cartridge detect sensor (PS802)
3. Delivery sensor (PS803)
4. Delivery paper width sensor (PS804)

In terms of jam, it is judged by whether a paper is at the sensor assembly at the time of the check time memorized in the CPU beforehand. If the CPU judges as the occurrence of jam, the printing operation is aborted and at the same time, it notifies it to the SCNT PCB.

7.3.2 Delay Jams

7.3.2.1 Pickup Delay Jam

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

In order to prevent the pickup delay jam due to the pickup failure, the machine executes the retry control that performs the pickup operation up to twice. In the second pickup operation, if the leading edge sensor (PS801) cannot detect the leading edge of paper within about 1.45 sec since the Cassette pickup solenoid (SL1) turns ON, the DCNT PCB judges as the pickup delay jam.

7.3.2.2 Delivery Delay Jam

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

If the delivery sensor (PS803) cannot detect the leading edge of paper after passing about 1.65 sec from the detection of the leading edge of paper with the leading edge sensor (PS801), the DCNT PCB judges as the delivery delay jam.

7.3.3 Stationary Jams

7.3.3.1 Pickup Stationary Jam

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

If the trailing edge of paper cannot be detected after passing about 5.4 sec since the leading edge sensor (PS801) detects the leading edge of paper, the DCNT PCB judges as the pickup stationary jam.

7.3.3.2 Delivery Stationary Jam

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

If the delivery sensor (PS803) cannot detect the leading edge of paper within about 1.48 sec after the leading edge sensor (PS801) detects the trailing edge of paper, the DCNT PCB judges as the delivery stationary jam.

7.3.4 Other Jams

7.3.4.1 Door Open Jam

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

If the leading edge sensor (PS801) or the delivery sensor (PS803) detects a paper when door open is detected, the DCNT PCB judges as the door open jam.

7.3.4.2 Wrapping Jam

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

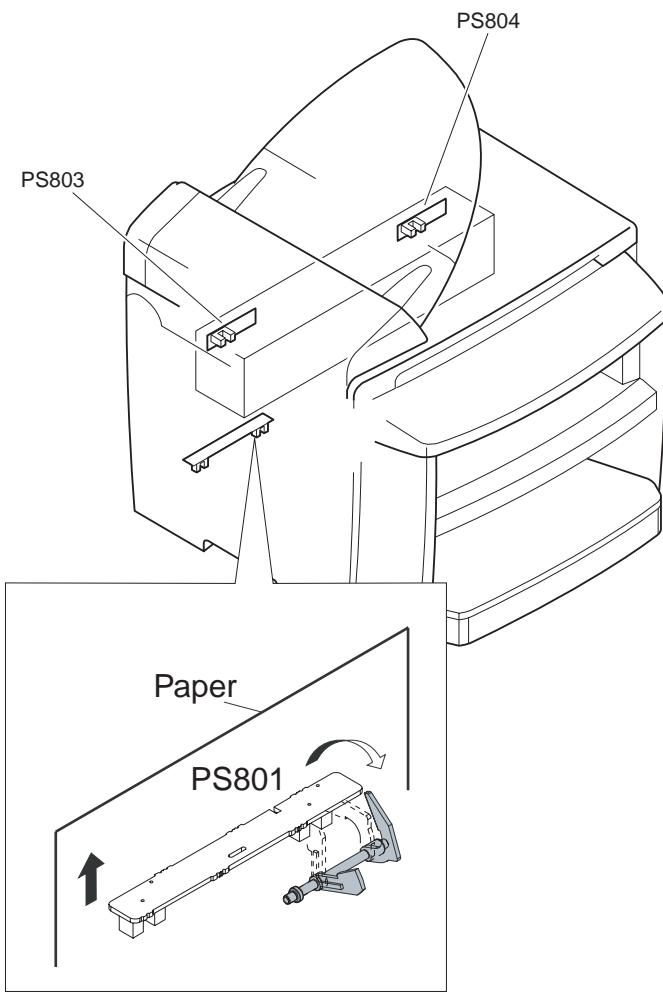

CPU executes the wrapping jam detection after it judges there is no delivery delay jam present.
If the delivery sensor (PS803) detects the trailing edge of paper within the predetermined time (from after about 0.08 sec since the detection of the paper leading edge by the delivery sensor (PS803) until about 1.09 sec after the detection of the paper trailing edge by the leading edge sensor (PS801)), CPU judges as the wrapping jam.

If it judges as the wrapping jam, it notifies the occurrence of the delivery stationary jam to the SCNT PCB.

7.3.4.3 Residual Jam at Startup

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

If the sensor (leading edge sensor (PS801) or delivery sensor (PS803), or delivery paper width sensor (PS804)) detects a paper at the start of initial rotation, CPU judges as the residual jam at startup.
When there is paper in inside the machine, the leading edge sensor flag is pushed up with paper, and paper having is judged.

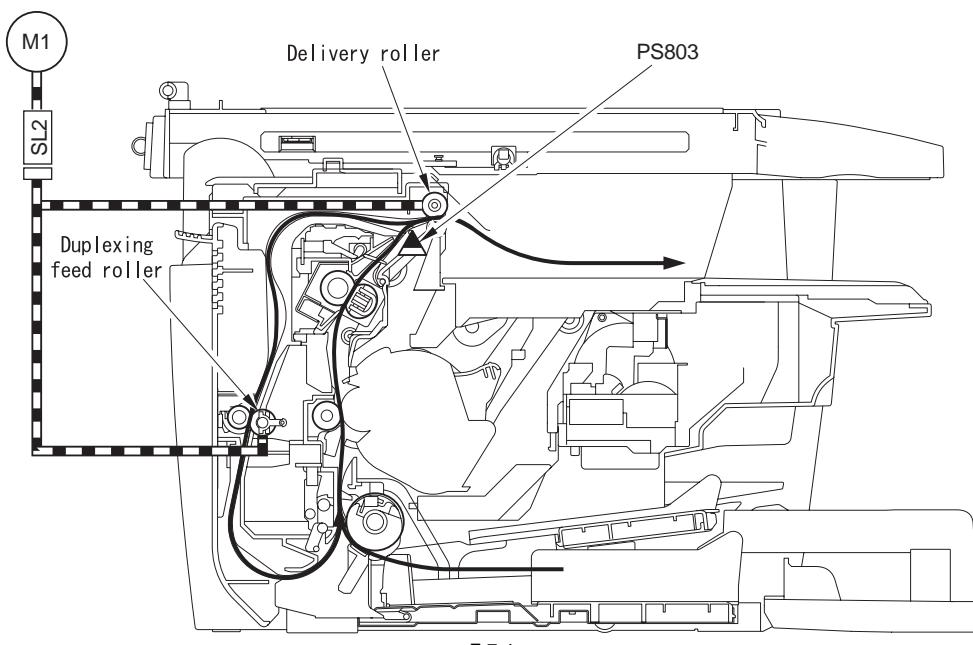

F-7-3

7.4 Duplex Unit

7.4.1 Overview

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The duplexing pick up operation of this machine is performed by the drive of the main motor (M1) under CPU control of the DCNT PCB. After the machine completes the 1st print and the paper's trailing edge passes over the delivery sensor (PS803), the duplexing drive solenoid (SL2) is turned on and the drive of the main motor (M1) is transmitted to the delivery roller and the duplexing feed roller. By turning the delivery roller in reverse direction, the paper is lead to the duplexing feed unit, and sent to the feed roller via duplexing feed roller. There is no sensor on the duplexing paper's feeding path to detect the arrival/passage of paper. There is no stationary function to stop and retain paper in duplexing unit.

8.1.2 Overview

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The fixing unit employs the on-demand fixing method, and it is composed of fixing film unit, in which the fixing heater, thermistor, and temperature fuse are incorporated, and the pressure roller.

The pressure roller and the delivery roller are driven with the main motor (M1).

A paper separated from the photosensitive drum is fed to inside of the fixing assembly, and the toner is fixed on a paper with the fixing film and the pressure roller. A paper being fixed is detected with the delivery sensor (PS803); then, delivered to outside of the machine via the delivery roller.

[1] Pressure roller

[2] Fixing film

[3] Delivery roller

H1: Fixing heater

PS803: Delivery sensor

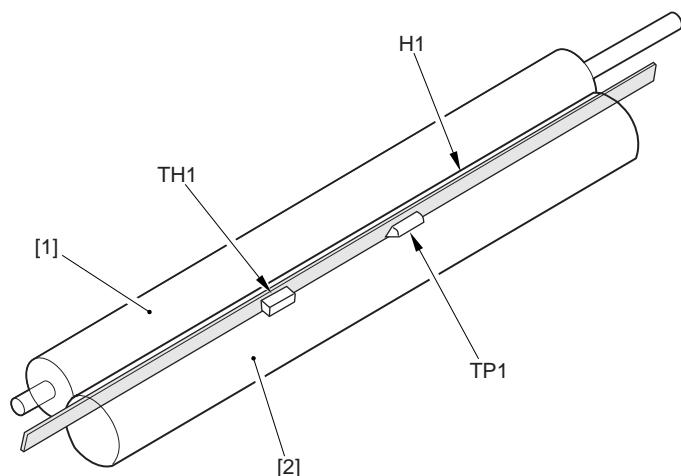

The fixing heater is the heater (ceramic heater) that the heating pattern is deposited on the ceramic plate.

By heating the fixing film with the fixing heater, it gives heat to passing papers.

The thermistor (TH1) locates at the center of the fixing heater (H1), and detects the temperature of the heater.

The temperature fuse (TP1) locates at the top center of the fixing heater. If the temperature of the fixing heater increases abnormally, it blocks power supply to the heater by meltdown.

The temperature control of the fixing assembly composed of the foregoing components is executed at the fixing control circuit on the DCNT PCB with the instruction of the CPU (IC902). There are the fixing heater drive circuit and the fixing heater safety circuit in the fixing control circuit.

- TP1: Temperature fuse

8.2 Various Control Mechanisms

8.2.1 Controlling the Temperature of the Fixing Unit

8.2.1.1 Fixing Temperature Control

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

With this control, the surface temperature of the fixing heater is detected, and also the drive signal of the fixing heater is controlled to maintain the target temperature of the fixing heater.

The temperature control of the fixing heater is executed with the following 3 modes:

Temperature Control at Startup:

The temperature control at startup is executed from the entry of print command to the DCNT PCB until the temperature of the fixing heater reaches the fixing target temperature.

The fixing target temperature is set to execute fixing with appropriate fixing temperature in accordance with paper type, size, thickness, and shape.

Temperature Control at Normal Times:

The temperature control at normal times is executed during printing to maintain the temperature of the fixing heater as its target temperature.

Temperature Control at Sheet-to-sheet Interval:

The temperature control at sheet-to-sheet interval is executed to keep the temperature lower than the target temperature in order to prevent the temperature raise at the area between a preceding sheet and a succeeding sheet in case of the envelop mode and the small size mode.

The temperature of the fixing heater is detected with the thermistor located on the fixing heater. When the surface temperature of the fixing heater increases, the resistance value of the thermistor is decreased, and the voltage of the fixing heater temperature detection signal of the thermistor is decreased.

The CPU (IC902) on the DCNT PCB monitors the voltage of the FSRTH signal. By outputting the fixing heater drive signal (FSRD) in accordance with the voltage, the CPU makes the phototriac coupler to turn ON/OFF, and it controls the temperature of the fixing heater to be the specified value.

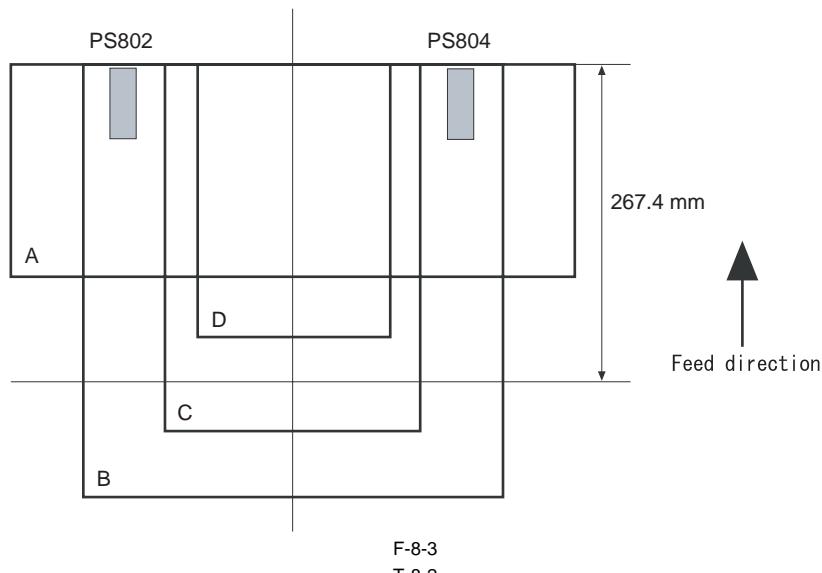

The CPU starts the fixing heater temperature control to be 100 deg C when the power is ON.

Because the viscosity of grease inside of the fixing film unit is high, melting the grease fully prevents feed fault inside of the fixing assembly or faulty image.

Fixing Mode:

In this machine, the fixing mode is determined by detecting paper size based on the time that a paper needs to go through the paper leading edge sensor, the paper width sensor, and the delivery paper width sensor.

The relationship between paper size being detected and the fixing mode is shown below. (From A to D indicate paper size.)

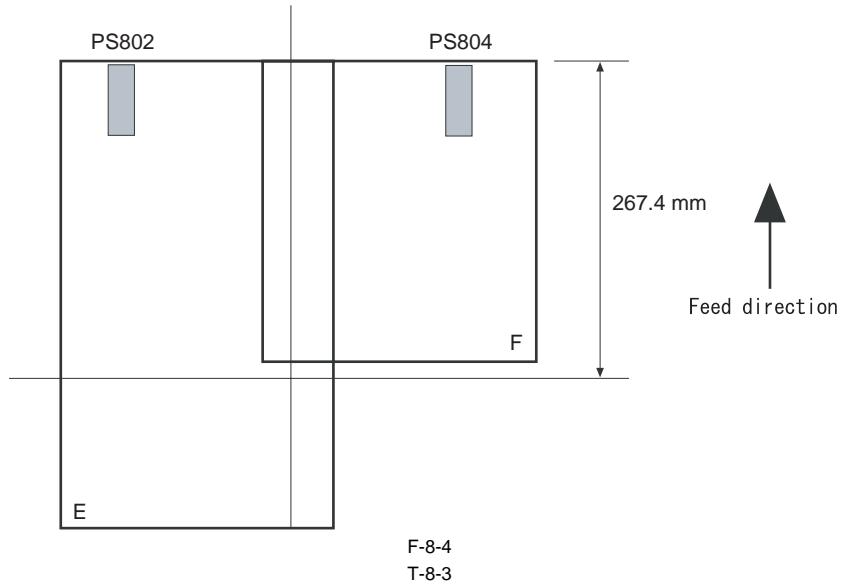

| | Paper length | Paper width/cartridge detect sensor PS802 | Delivery paper width sensor PS804 | Fixing mode |
|---|--------------------|---|-----------------------------------|------------------|
| A | Less than 267.4 mm | Detect | Detect | Envelop |
| B | 267.4 mm or above | Detect | Detect | Normal*1 |
| C | 267.4 mm or above | Not detect | Not detect | Small size paper |

| | | | | |
|---|--------------------|------------|------------|---------|
| D | Less than 267.4 mm | Not detect | Not detect | Envelop |
|---|--------------------|------------|------------|---------|

In order to prevent temperature increase at the end of the fixing film that occurs when putting papers on one side and passing them through the machine while the paper width guide is fully opened, the machine has the delivery paper width sensor.

The relationship between paper size when putting papers on one side and passing them through the machine and the fixing mode is shown below. (E and F indicate paper size.)

| | Paper length | Paper width sensor | Delivery paper width sensor | Fixing mode |
|---|--------------|--------------------|-----------------------------|-----------------------|
| E | No object *2 | Detect | Not detect | Small size paper mode |
| F | No object *2 | Not detect | Detect | Small size paper mode |

*1: Eight modes, except envelop/small size paper

*2: When setting papers at the end of the paper guide and passing them through the machine, it becomes the small size paper mode regardless of paper length.

8.3 Protection Function

8.3.1 Protection Function

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

In order to prevent the fixing heater runaway, the machine has the following 3 protection functions.

1. Protection function with CPU
2. Protection function with the fixing heater safety circuit
3. Protection function with the temperature fuse

The description of each function is as follow:

1. Protection Function with CPU

CPU always monitors voltage of the fixing heater temperature detection signal sent from the thermistor. If the fixing temperature greatly exceeds the specified value, CPU judges as failure of the fixing assembly, and it blocks the power distribution to the fixing heater. Moreover, error (E000) is displayed in the operation part at the same time.

T-8-4

| Failure of fixing assembly | Thermistor temperature | Heater temperature detection time |
|--|------------------------|-----------------------------------|
| From the start of temperature control until 1.47 sec | Less than 55 deg C | |
| Normal times | 230 deg C or above | 0.15 sec in a row |

| Failure of fixing assembly | Thermistor temperature | Heater temperature detection time |
|---|------------------------|-----------------------------------|
| During normal temperature control | Less than 100 deg C | 1.2 sec in a row |
| During temperature control at sheet-to-sheet interval, during cleaning mode | Less than 55 deg C | 1.2 sec in a row |
| After the thermistor temperature exceeds 50 deg C | Less than 20 deg C | 0.3 sec in a row |
| From the start of power distribution to the fixing heater until 23 sec | Less than 100 deg C | |
| While a paper is nipped in the fixing assembly | Less than 210 deg C | 30 sec in a row |
| | Less than 145 deg C | 30 sec in a row |

2. Protection function with the fixing heater safety circuit

The circuit always monitors voltage of the fixing heater temperature detection signal sent from the thermistor. If the fixing temperature greatly exceeds the specified value, it blocks the power distribution to the fixing heater regardless of the instruction from CPU.

If the temperature of the fixing heater abnormally increases and the voltage of the fixing heater temperature detection signal sent from the thermistor becomes less than about 0.57V (equivalent of 265 deg C), the output of the comparator becomes 'L' and the transistor turns OFF. As a result of that, the relay is turned OFF to block the power distribution to the fixing heater regardless the relay drive signal sent from the CPU.

3. Protection function with the temperature fuse

If the temperature of the fixing heater abnormally increases and the temperature of the temperature fuse exceeds about 230 deg C, the temperature fuse melts down to block the power distribution to the fixing heater.

8.4 Parts Replacement Procedure

8.4.1 Fixing Unit

8.4.1.1 Preparation for Removing Fixing Assembly

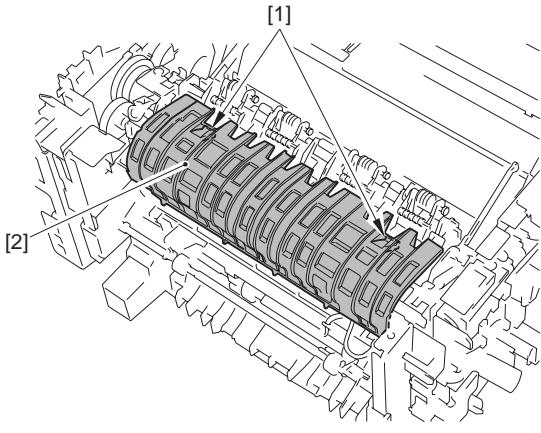

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover. [\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover. [\(page 9-3\)](#) Reference[Removing the Left Cover]

9.1 Control Panel

9.1.1 Outline

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The machine's control panel consists of the following PCBs, and is controlled by the SCNT PCB.

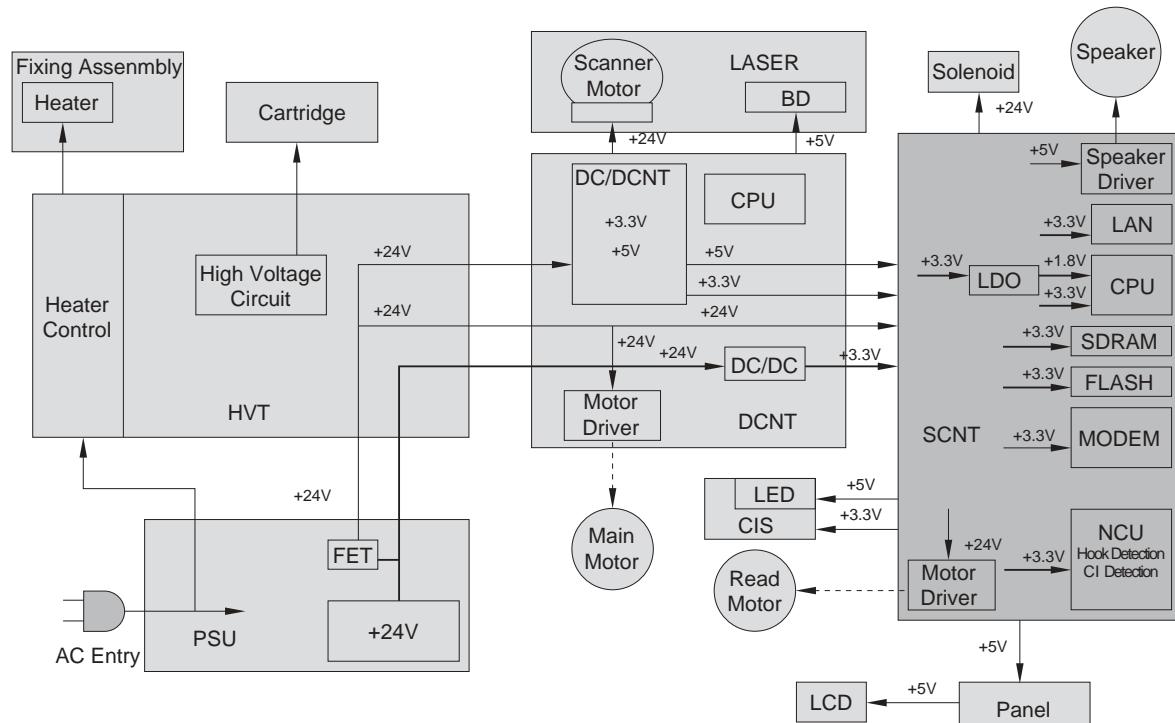

9.2 Power Supply

9.2.1 Power Supply

9.2.1.1 Power Supply Route

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

9.2.2 Protection Function

9.2.2.1 Protecting Function

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

In the case of troubles with power supply PCB such as short circuit to loads, and resulted in occurring overcurrent or over overvoltage, there is a protecting function for overcurrent/overvoltage to automatically shut the output voltage to avoid fault of power supply PCB.

In the case that the protecting function for overcurrent/overvoltage is activated, it recovers by turning off the main power switch to handle the load trouble, and then, turning on the main switch again. Also, there are 2 pc of fuses in PCB. If there is overcurrent in AC line, fuse is blown out and power distribution is shutdown.

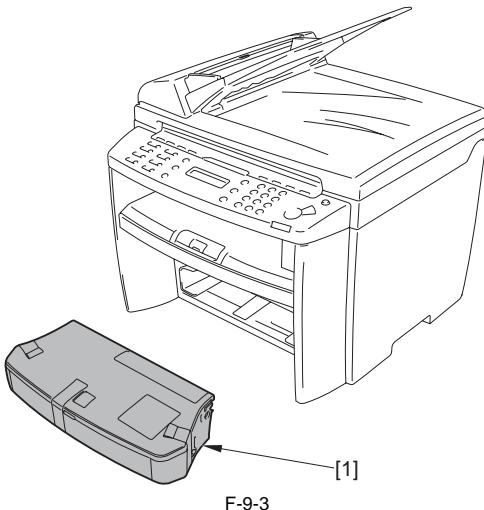

9.3 Parts Replacement Procedure

9.3.1 Front Cover

9.3.1.1 Removing the Front Cover

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the paper cassette [1].

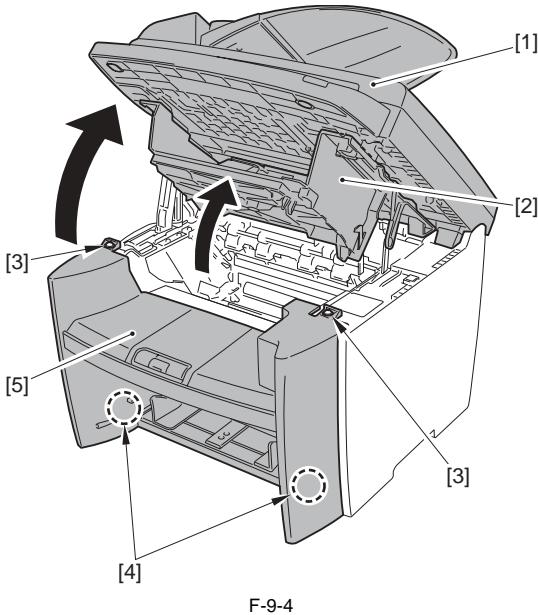

- 2) Open the control panel [1].

- 3) Open the printer cover [2].

- 4) Remove the front cover [5].

- 2 screws [3]
- 2 claws [4]

9.3.2 Rear Cover

9.3.2.1 Preparation for Removing the Rear Cover

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

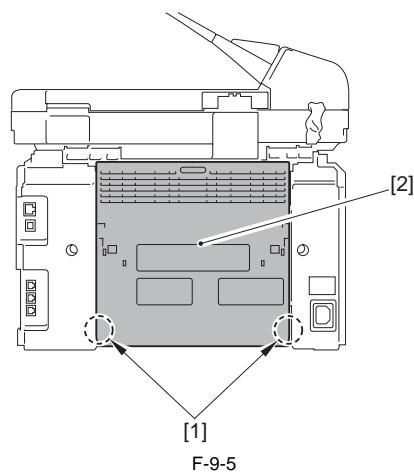

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover. [\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover. [\(page 9-3\)](#) Reference[Removing the Left Cover]

9.3.2.2 Removing the Rear Cover

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-

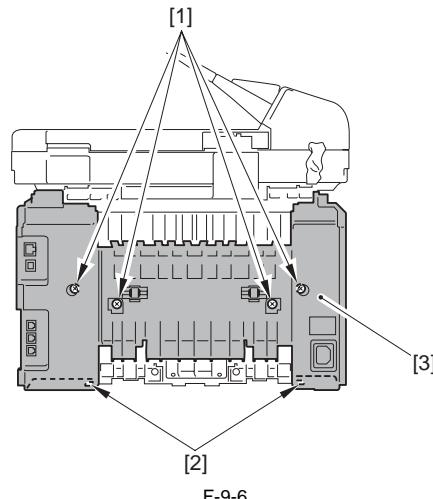

SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the 2 shafts [1], and detach the rear cover [2].

- 2) Remove the rear cover 2 [3].

- 4 screws [1]
- 2 claws [2]

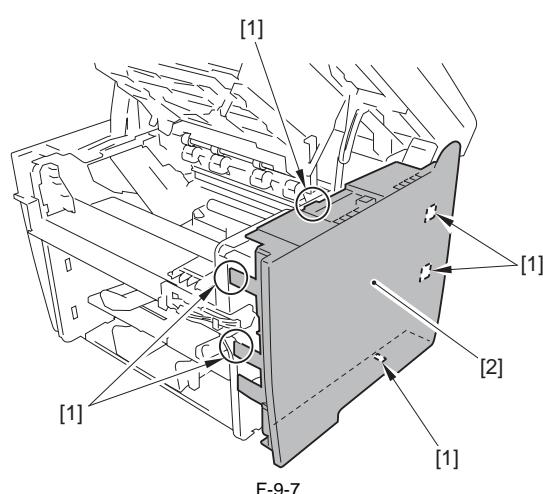

9.3.3 Right Cover

9.3.3.1 Removing the Right Cover

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the 6 claws [1] to detach the right cover [2].

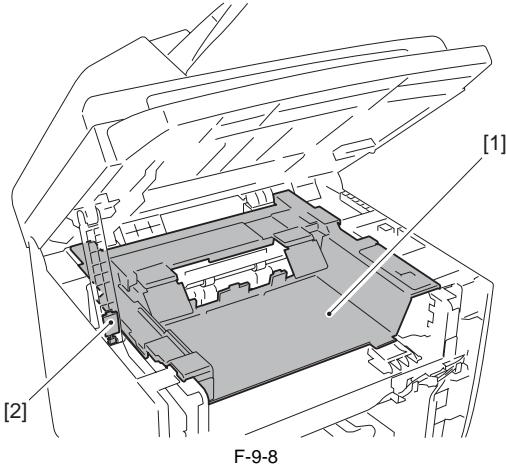

9.3.4 Left Cover

9.3.4.1 Removing the Left Cover

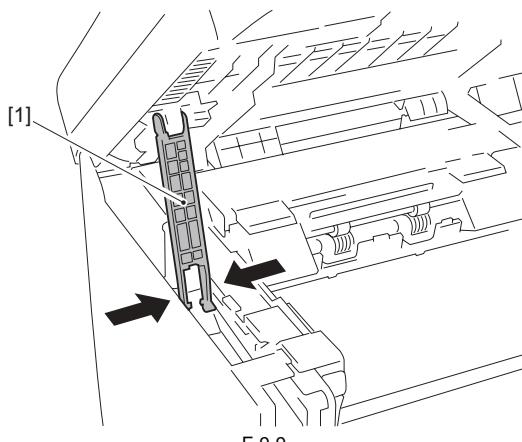

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front over. (page 9-2) Reference[Removing the Front Cover]
- 2) Close the printer cover [1].
- 3) Disengage the claw to remove the holder [2].

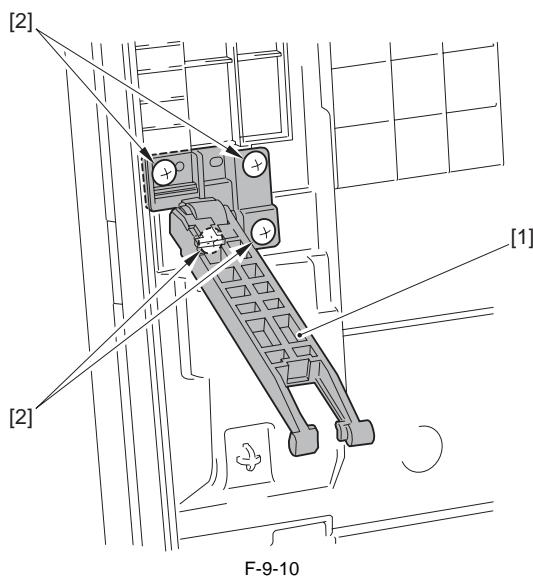

F-9-8

- 4) Remove from the damper rail while picking the damper [1]

F-9-9

- 5) Remove the 4 screws [2] to remove the damper [1].

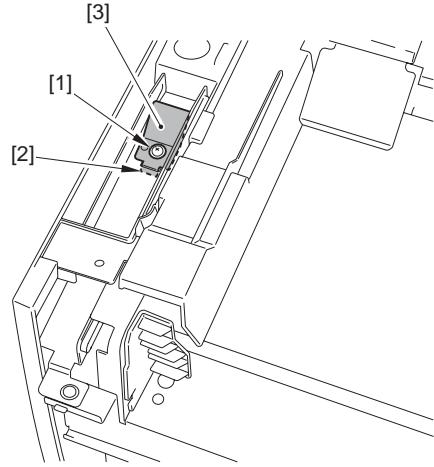

F-9-10

The scanner unit cannot be secured if the damper is removed. Be careful not to get your hands caught because you have to perform the work with the control panel open from now onward.

- 6) Remove the damper stopper [3].

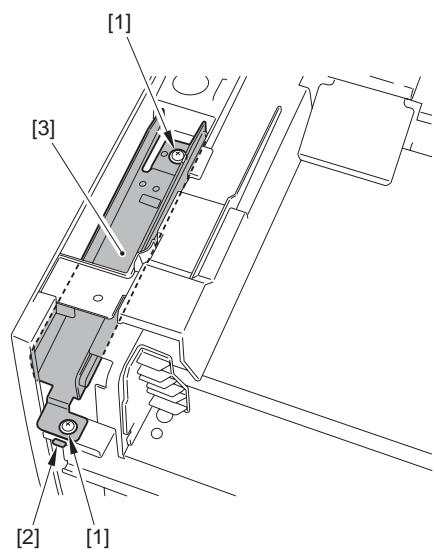

- 1 screw [1]
- 1 claw [2]

F-9-11

- 7) Remove the damper rail [3].

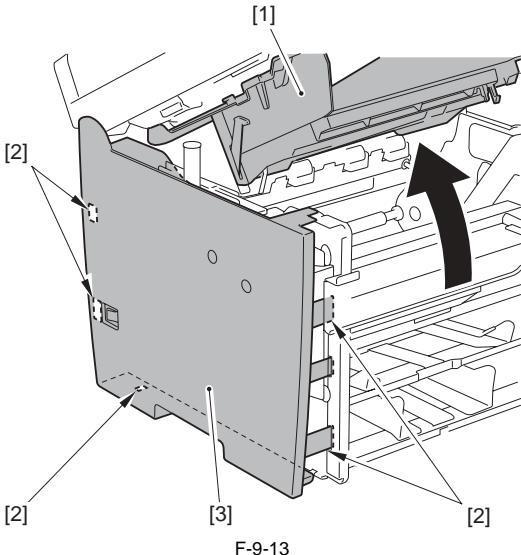

- 2 screws [1]
- 1 claw [2]

F-9-12

- 8) Open the printer cover [1].

- 9) Remove the 5 claws [2] to detach the left cover [3].

9.3.5 Upper Cover

9.3.5.1 Preparation for Removing the Upper Cover

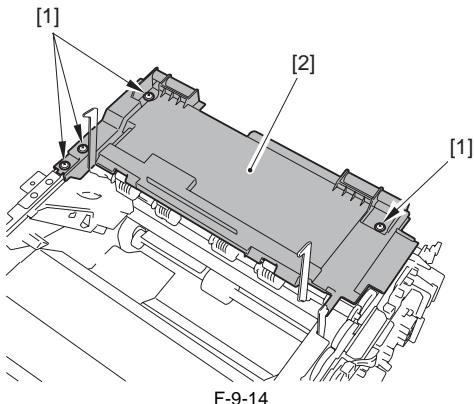

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover. [\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover. [\(page 9-3\)](#) Reference[Removing the Left Cover]
- 4) Remove the rear cover. [\(page 9-2\)](#) Reference[Removing the Rear Cover]
- 5) Remove the scanner unit. [\(page 3-3\)](#) Reference[Removing the Scanner Unit]
- 6) Remove the printer cover. [\(page 9-4\)](#) Reference[Removing the Printer Cover]

9.3.5.2 Removing the Upper Cover

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the 4 screws [1], and detach the upper cover [2].

9.3.6 Cartridge Cover

9.3.6.1 Preparation for Removing the Printer Cover

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

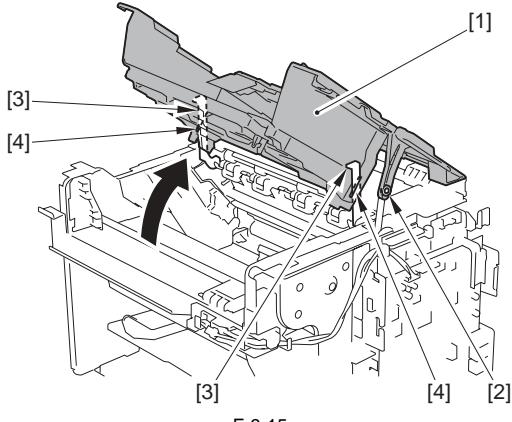

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover. [\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover. [\(page 9-3\)](#) Reference[Removing the Left Cover]
- 4) Remove the rear cover. [\(page 9-2\)](#) Reference[Removing the Rear Cover]
- 5) Remove the scanner unit. [\(page 3-3\)](#) Reference[Removing the Scanner

Unit]

9.3.6.2 Removing the Printer Cover

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Open the printer cover [1].
- 2) Remove the link stopper [2].
- 3) Remove the 2 pressure release levers [3] through the 2 holes [4].

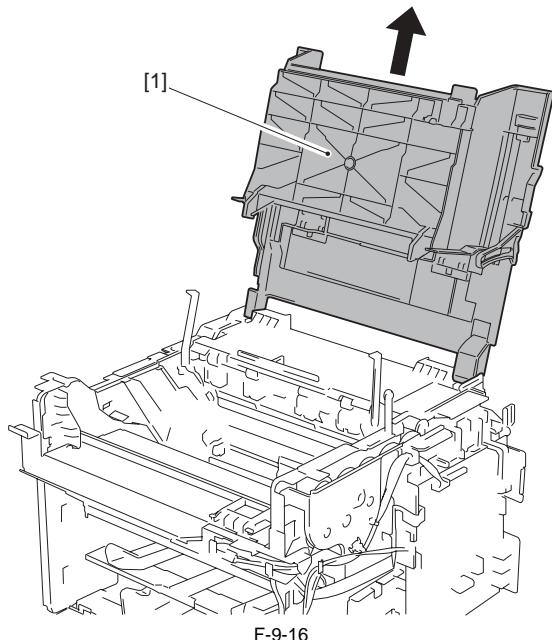

F-9-15

Points to Note When Attaching

Make sure to attach the link stopper [2] after attaching the right cover. If attaching the link stopper while attaching the printer cover, it may drop inside the machine.

- 4) With the printer cover [1] opened, detach it upward.

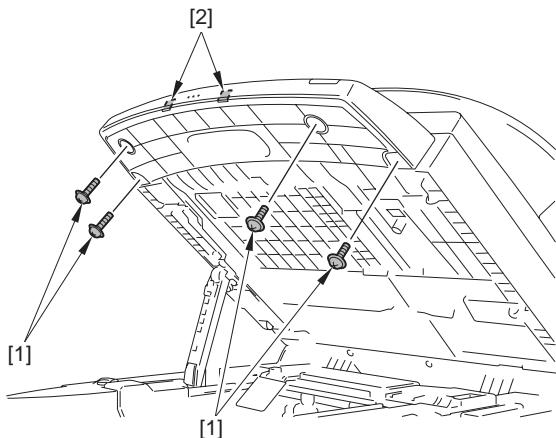

F-9-16

9.3.7 Operation Panel Unit

9.3.7.1 Removing the Control Panel Unit

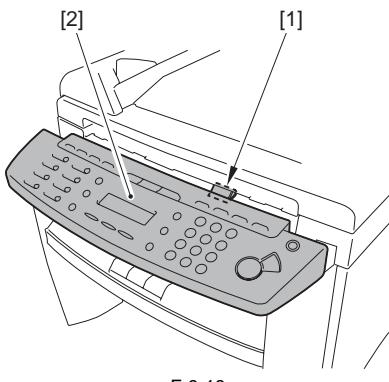

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the 4 screws [1] and the 2 claws [2].

F-9-17

2) Disconnect the connector [1], and remove the control panel unit [2].

F-9-18

9.3.8 SCNT Board

9.3.8.1 Preparation for Removing the SCNT PCB

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Outputting report

Before replacing the SCNT PCB, output and record the report for the information such as the user setting and the setting of the service mode.

Service mode > REPORT

Initial setting/registration > Report setting > Report output

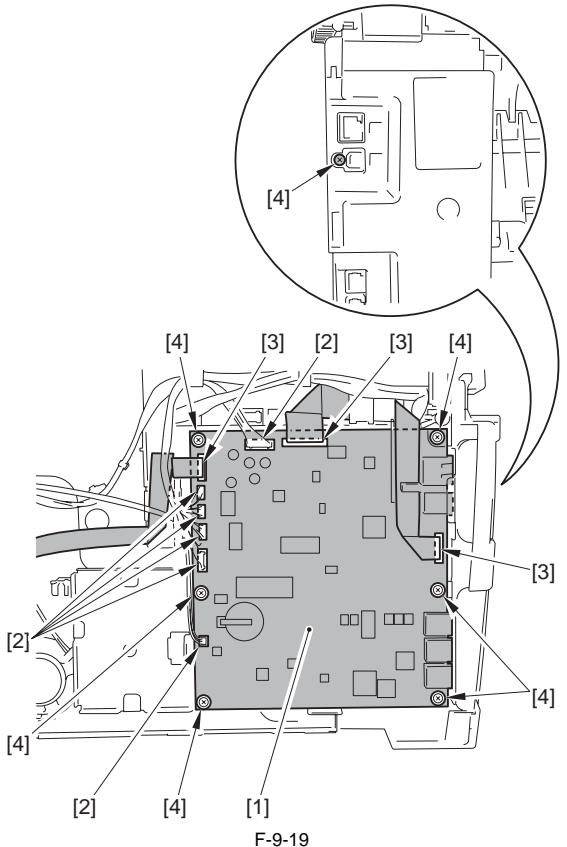

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover. [\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover. [\(page 9-3\)](#) Reference[Removing the Left Cover]

9.3.8.2 Removing the SCNT PCB

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the SCNT PCB [1].

- 6 connectors [2]
- 3 flat cables [3]
- 7 screws [4]

F-9-19

9.3.8.3 Actions At Replacing the SCNT PCB

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Outputting report

Before replacing the SCNT PCB, be sure to output the report so that the information such as the user settings and the service mode settings can be saved.

In Service Mode > REPORT

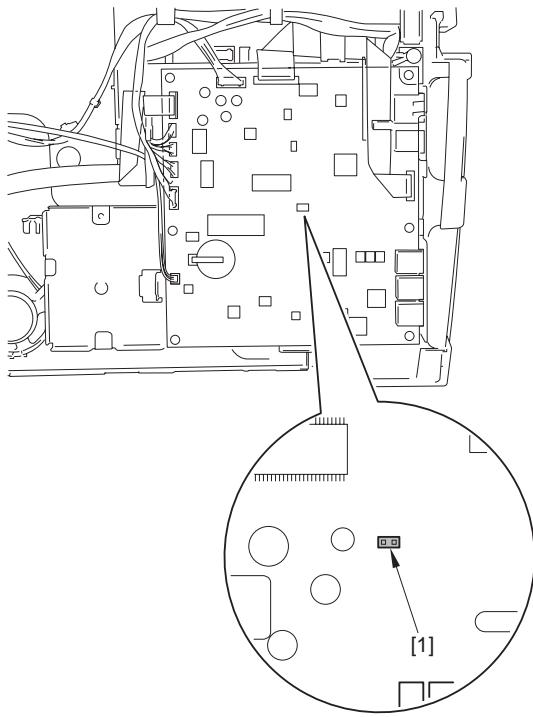

Additional Functions > Report Settings > Report Output

After replacing the SCNT PCB, follow the description of the report to input the user data and the service data.

Changing the jumper connector

When replacing the SCNT PCB, be sure to switch the jumper connector locations to ON state.

* The SCNT PCB is shipped with the jumper connector of the lithium battery OFF.

F-9-20

Switching of the language display

The language display will be in English after replacing the SCNT PCB. Be sure to change the settings so that the language display matches the communications standards of the respective country or region.

Additional Functions > # > SERVICE CHOICE > OK > COUNTRY/REGION CODE > OK > JAPAN > OK

9.3.9 DCNT Board**9.3.9.1 Preparation for Removing the DCNT PCB**

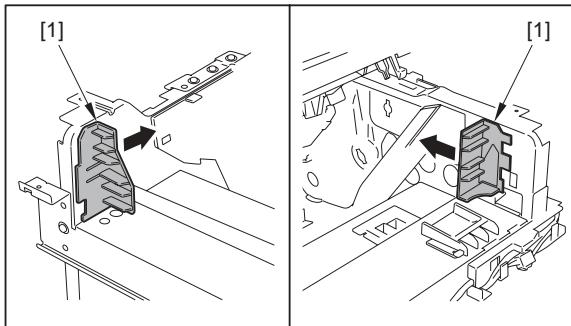

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front cover. [\(page 9-2\)](#) Reference[Removing the Front Cover]

- 3) Remove the left cover. [\(page 9-3\)](#) Reference[Removing the Left Cover]
- 4) Remove the printer cover. [\(page 9-4\)](#) Reference[Removing the Printer Cover]

9.3.9.2 Removing the DCNT PCB

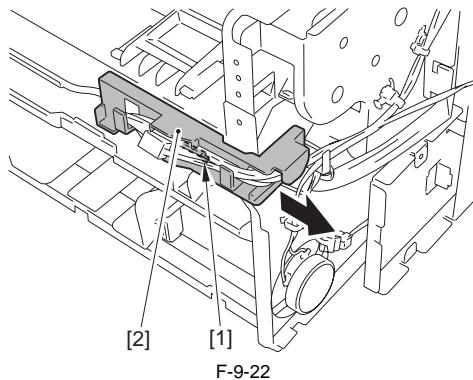

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the 2 guides [1] in the direction of the arrow.

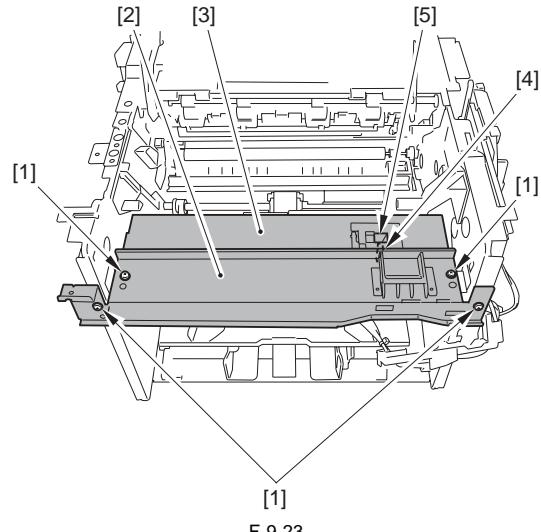

F-9-21

- 2) Remove the claw [1] to remove the cable guide [2] in the direction of the arrow.

F-9-22

- 3) Remove the 4 screws [1], and detach the scanner cover (front) [2] and the scanner cover (rear) [3].

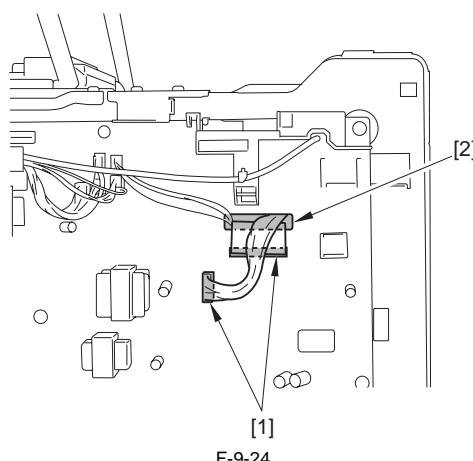

F-9-23

⚠ Points to Note When Attaching

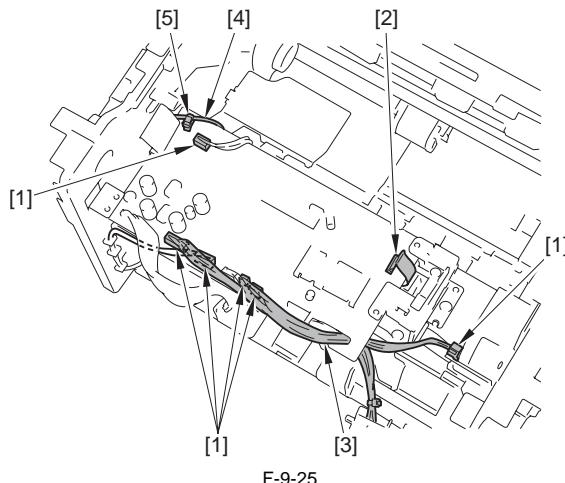

Make sure to insert the shutter arm [4] through the hole [5] of the scanner cover (rear).

- 4) Disconnect the 2 connectors [1] located at the left side, and put them inside the left side plate through the holes [2].

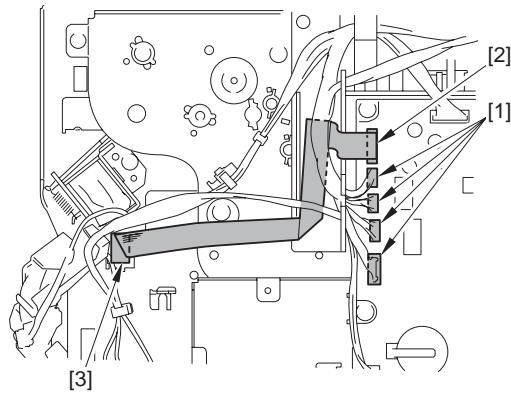

F-9-24

- 5) Disconnect the 5 connectors [1] and the flat cable [2] to remove the cable [3] from the PCB hole.
- 6) Free the cable [4] from the cable clamp [5].

F-9-25

7) Disconnect the 4 connectors [1] to remove the flat cable [2].

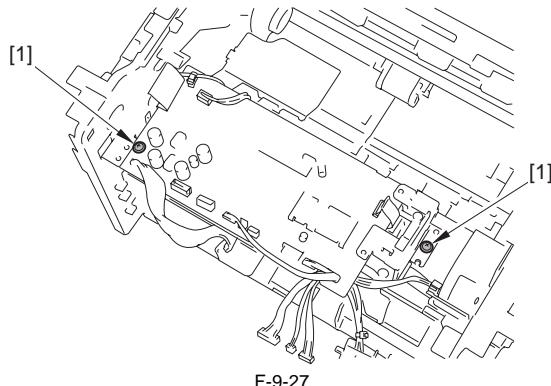

F-9-26

Points to Note When Attaching

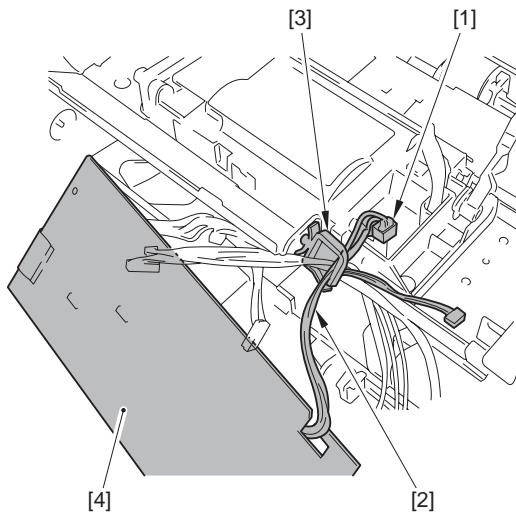

Make sure to put the flat cable [2] through the hole [3].

8) Remove the 2 screws [1].

F-9-27

9) Disconnect the connector [1], put the cable [2] through the cable clamp [3], and remove the DCNT PCB [4].

F-9-28

9.3.10 Power Supply PCB

9.3.10.1 Preparation for Removing the Power Supply PCB

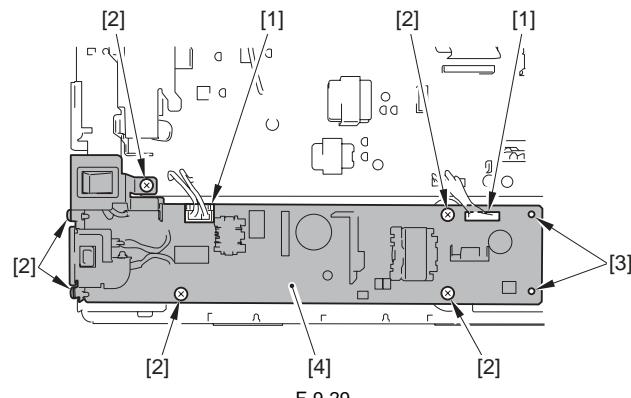

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front cover.[\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover.[\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover.[\(page 9-3\)](#) Reference[Removing the Left Cover]
- 4) Remove the rear cover.[\(page 9-2\)](#) Reference[Removing the Rear Cover]

9.3.10.2 Removing the Power Supply PCB

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the power supply PCB [3].
 - 2 connectors [1]
 - 6 screws [2]

F-9-29

9.3.11 High-voltage Power Supply Board

9.3.11.1 Preparation for Removing the High Voltage PCB

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the front cover.[\(page 9-2\)](#) Reference[Removing the Front Cover]
- 2) Remove the right cover.[\(page 9-2\)](#) Reference[Removing the Right Cover]
- 3) Remove the left cover.[\(page 9-3\)](#) Reference[Removing the Left Cover]
- 4) Remove the rear cover.[\(page 9-2\)](#) Reference[Removing the Rear Cover]
- 5) Remove the scanner unit.[\(page 3-3\)](#) Reference[Removing the Scanner Unit]
- 6) Remove the printer cover.[\(page 9-4\)](#) Reference[Removing the Printer

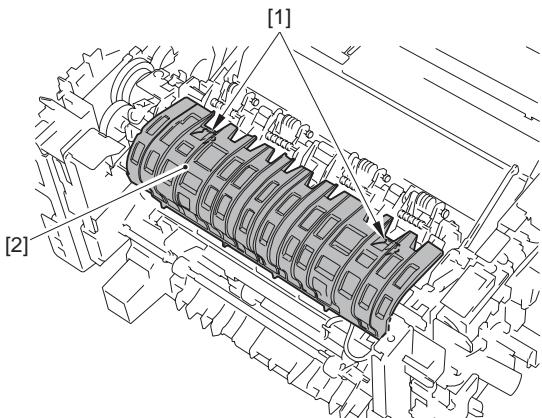

Cover]

- 7) Remove the upper cover. (page 9-4) Reference[Removing the Upper Cover]
 8) Remove the Power Supply PCB. (page 9-7) Reference[Removing the Power Supply PCB]

9.3.11.2 Removing the High Voltage PCB

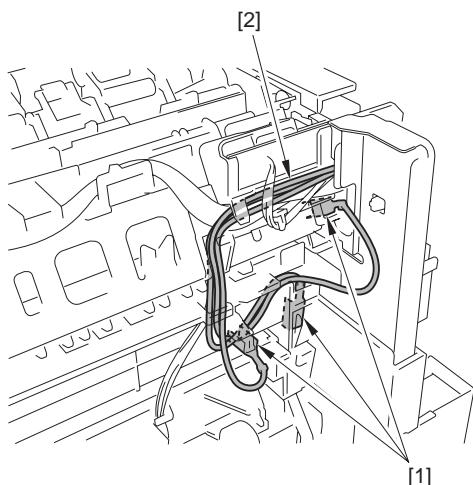

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

- 1) Remove the 2 claws [1] to remove the fixing guide [2].

F-9-30

- 2) Disconnect the 3 connectors [1] at the back and free the cable [2] from the cable guide.

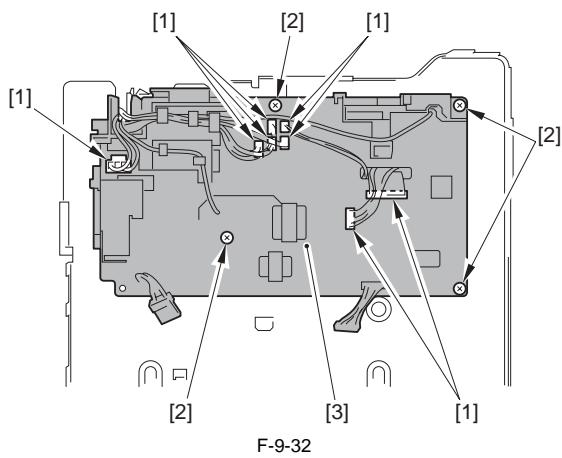

F-9-31

⚠ Points to Note When Attaching

Do not confuse the connecting target for the black cable and the red cable.
 Make sure to connect to the respective terminals stamped as 'RED' and 'BLACK'.

- 3) Remove the high voltage PCB [3].

- 8 connectors [1]
- 4 screws [2]

F-9-32

Chapter 10 Maintenance and Inspection

Contents

| 10.3.3 Cleaning Method (Reader Unit)..... | 10-2 |
| 10.3.4 Cleaning Method (Pressure Roller) | 10-3 |

10.1 Periodically Replaced Parts

10.1.1 Periodically Replaced Parts

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

There are no periodically replaced parts with this machine.

10.2 Periodical Service

10.2.1 Periodically Service Items

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

There are no periodically service items with this machine.

10.3 Cleaning

10.3.1 Cleaning Items

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

T-10-1

| Responsible by: Cleaning area | Cleaning area | Cleaning timing |
|----------------------------------|-------------------------------|--|
| User | External covers | When they are smudged |
| | Copyboard glass | When the image read from the copyboard is smudged |
| | Backside of copyboard cover | When the image read from the copyboard is smudged |
| | ADF reading area | When the image read from the ADF has a black line in vertical direction |
| | Document pickup roller | When document pickup performance drops away |
| | Scraper | When document separating performance drops away |
| | Document feed roller | When document feeding performance drops away |
| | Document delivery roller | When document delivery performance drops away |
| | Pressure roller (fixing unit) | When there are irregular black lines in vertical direction in the paper |
| | | |
| Service Technician | Pickup roller | When paper pickup performance drops away |
| | Separation pad | When paper separating performance drops away |
| | Feed roller | When paper feeding performance drops away |
| | Transfer charging roller | When there is smudge at the back of the paper, or when there are white spots at the constant intervals of approx. 46mm in the image. |
| | Static eliminator | When there are dot patterns in the image |
| | Fixing inlet guide | When there is smudge in the paper, when there are irregular black lines in vertical direction, when there is paper jam, when there are wrinkles in the paper |
| | | |

Make sure to turn off the power and disconnect the power supply plug upon cleaning. It may cause fire/electric shock if failing turning off the power.

10.3.2 Cleaning Method (External Covers)

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

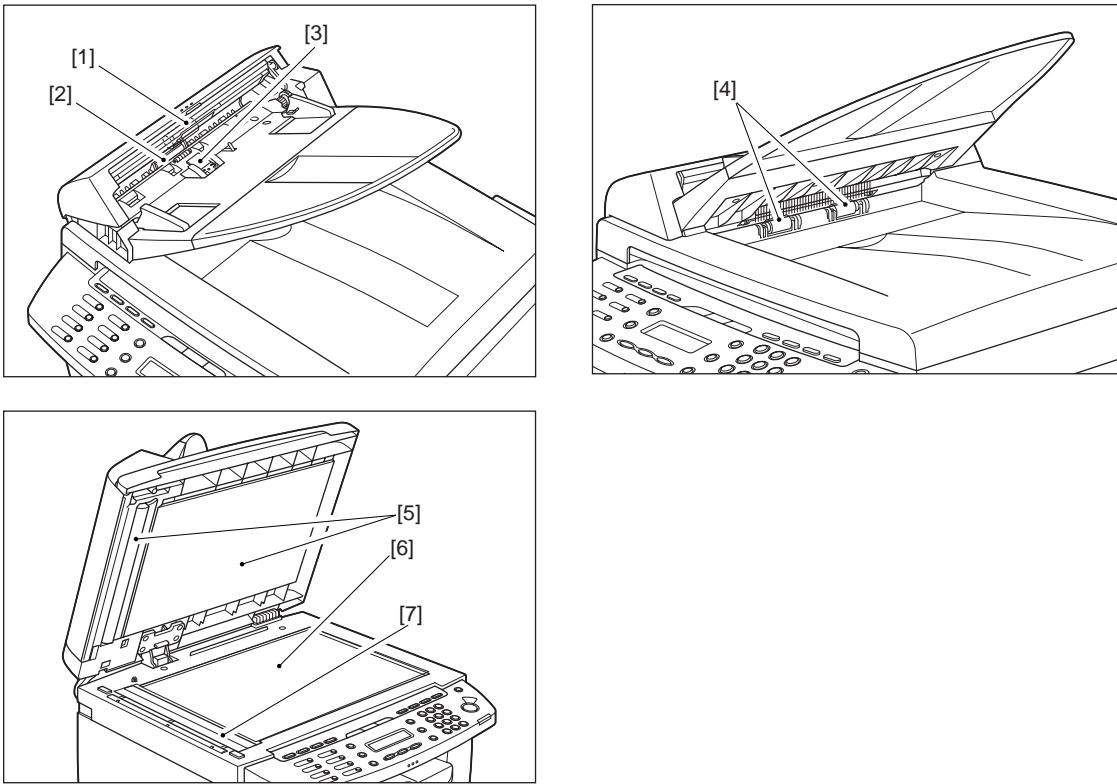

Wring of the cloth moistened with water or mild detergent, and wipe off the smudges.

In the case of using mild detergent, make sure to wipe off the detergent with the cloth moistened with water afterward.
Once the smudge is removed, dry with the soft dry cloth.

10.3.3 Cleaning Method (Reader Unit)

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

In the case of ADF

F-10-1

[1] Document pickup roller

Open the ADF and wipe off the smudge with the soft dry cloth.

[2] Document feed roller

Open the ADF and wipe off the smudge with the soft dry cloth.

[3] Scraper

Open the ADF and wipe off the smudge with the soft dry cloth.

[4] Document delivery roller

Wipe off the smudge with the soft dry cloth.

[5] Backside of copyboard cover

Open the copyboard cover and wipe off the smudge with the soft dry cloth.

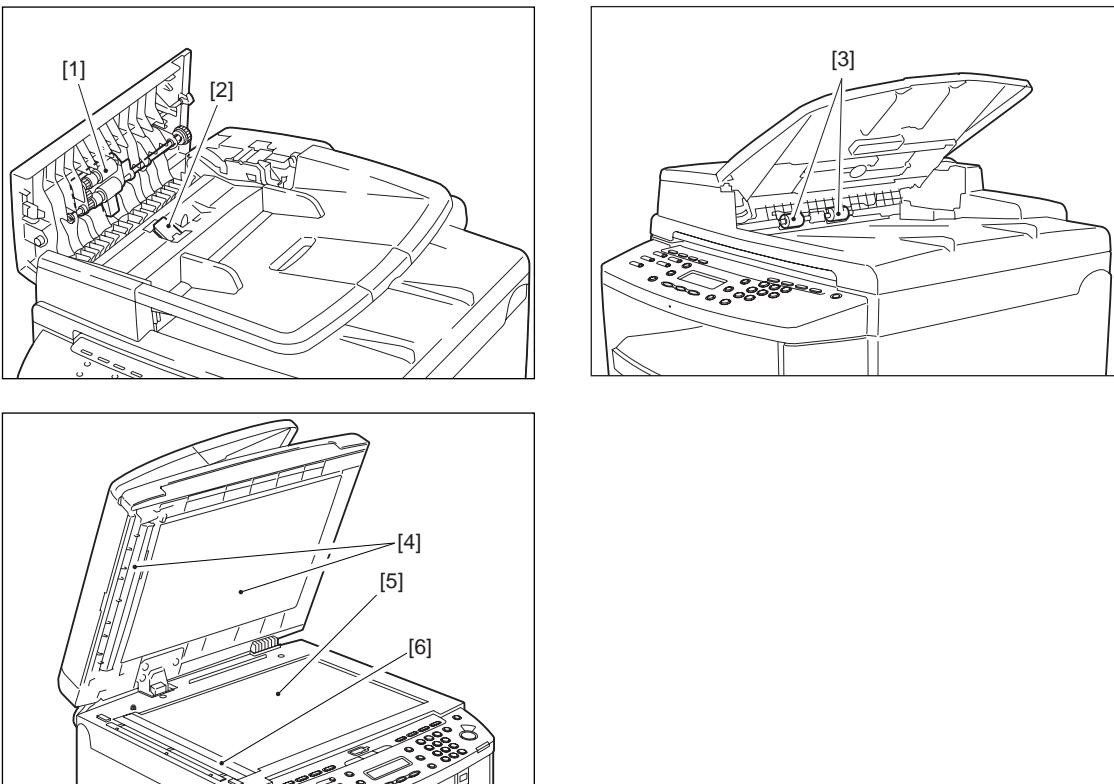

[6] Copyboard glass

Open the copyboard cover and wipe off the smudge with the soft dry cloth.

[7] ADF reading area

Open the copyboard cover and wipe off the smudge with the soft dry cloth.

In the case of DADF

F-10-2

[1] DADF separation roller unit

Open the DADF and wipe off the smudge with the soft dry cloth.

[2] DADF separation pad

Open the DADF and wipe off the smudge with the soft dry cloth.

[3] Document delivery roller

Wipe off the smudge with the soft dry cloth.

[4] Backside of copyboard cover

Open the copyboard cover and wipe off the smudge with the soft dry cloth.

[5] Copyboard glass

Open the copyboard cover and wipe off the smudge with the soft dry cloth.

[6] DADF reading area

Open the copyboard cover and wipe off the smudge with the soft dry cloth.

10.3.4 Cleaning Method (Pressure Roller)

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

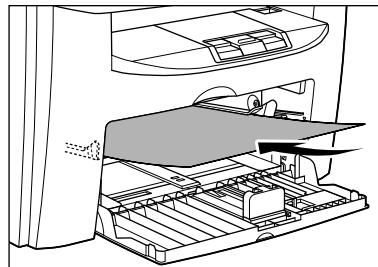

MEMO:

Cleaning the roller takes approximately 130 seconds.

1) Press [Additional Functions].

2) Press [-] or [+>] to select <ADJUST./CLEANING>, then press [OK].

3) Load a sheet of blank A4 paper (standard paper) in the multi-purpose tray.

F-10-3

4) Press [-] or [+>] to select <FIX. UNIT CLEANING>, then press [OK].

Cleaning starts. When finished, the display returns to standby mode.

Chapter 11 Measurement and Adjustments

Contents

| | |
|--------------------------------------|------|
| 11.1 Basic Adjustments..... | 11-1 |
| 11.1.1 Paper Margin Adjustment | 11-1 |
| 11.1.2 Reading Adjustment..... | 11-1 |
| 11.1.3 Print Adjustment | 11-2 |

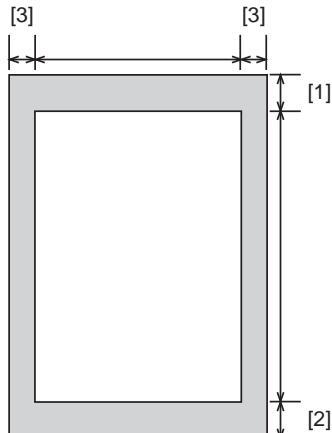

11.1 Basic Adjustments

11.1.1 Paper Margin Adjustment

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

After pressing 'Additional Functions' button and '#' button to select 'SERVICE'S CHOICE', select 'SERV-ICE MODE', then select 'PAPER MARGIN' with the cursor button and press 'OK' button.

Select the item to adjust by the cursor buttons (+/-).
Effective only when using 'COPY' function

F-11-1

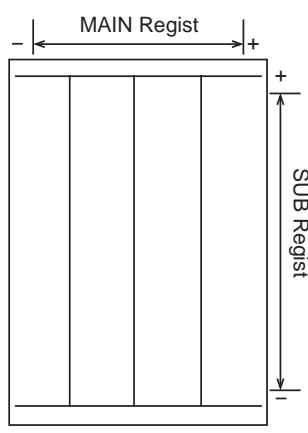

T-11-1

| | |
|-------------------------|-----------|
| [1] Leading edge erase | 4mm (0-5) |
| [2] Trailing edge erase | 5mm (0-5) |
| [3] Vertical edge erase | 3mm (0-5) |

11.1.2 Reading Adjustment

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

After pressing 'Additional Functions' button and '#' button to select 'ADJUST', press 'OK' button.
Select the item to adjust by the cursor buttons (+/-).

F-11-2

BOOK MAIN REGIST

Item to enable adjusting the reading start position of horizontal scanning at Book reading

BOOK SUB REGIST

Item to enable adjusting the reading start position of vertical scanning at Book reading

ADF MAIN REGIST

Item to enable adjusting reading start position of horizontal scanning at ADF reading

T-11-2

| Setting value | Contents |
|---------------|---------------|

BOOK SCAN L/R**BOOK COPY L/R****BOOK FAX L/R**

Item of setting range to enable adjusting right/left margins at Book reading (0 to 4mm)

ADF SCAN L/R**ADF COPY L/R****ADF FAX L/R**

Item of setting range to enable adjusting right/left margins at Book reading (0 to 4mm)

11.1.3 Print Adjustment

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

After pressing the 'Additional Functions' button and '#' button, select 'ADJUST', and then, press 'OK' button.

Select the item to adjust with the cursor buttons (+/-).

TOP-MP

Item to enable adjusting recording start position of vertical scanning when making prints from the manual feeder tray

TOP-CASSETTE

Item to enable adjusting recording start position of vertical scanning when making prints from the pickup tray

TOP-DUPLEX MP

Item to enable adjusting recording start position of vertical scanning when making duplex prints from the manual feeder tray

TOP-DUPLEX CAS.

Item to enable adjusting recording start position of vertical scanning when making duplex prints from the pickup tray

LEFT-MP

Item to enable adjusting recording start position of horizontal scanning when making prints from the manual feeder tray

LEFT-CASSETTE

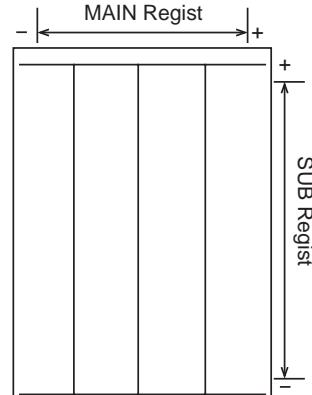

Item to enable adjusting recording start position of horizontal scanning when making prints from the pickup tray

LEFT-DUPLEX MP

Item to enable adjusting recording start position of horizontal scanning when making duplex prints from the manual feeder tray

LEFT-DUPLEX CAS.

Item to enable adjusting recording start position of horizontal scanning when making duplex prints from the pickup tray

Chapter 13 Error Code

Contents

| | |
|--------------------------------|------|
| 13.1 Error Code..... | 13-1 |
| 13.1.1 Error Code Outline..... | 13-1 |
| 13.1.2 Error Code..... | 13-1 |

13.1 Error Code

13.1.1 Error Code Outline

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

An error code is used to indicate a fault in a machine, and is indicated in the machine's LCD, showing the nature (symptoms) of the fault. Using the error code, the service man can readily find out how to correct the fault by simply referring to the service manual.

An error code may be either of the following two types:

Service Error Codes

If a fault calls for a service man for correction, it is indicated as a service man error code in the form of "SYSTEM ERROR E+number."

13.1.2 Error Code

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

System error code

T-13-1

| Error code | Major cause/detection | Remedy |
|------------|------------------------|--|
| E198 | Flash ROM write error. | - Turn the power OFF and then back ON.. - Replace the SCNT PCB. |
| E674 | Modem error. | - Turn the power OFF and then back ON.. - Replace the SCNT PCB. |

Scanner error code

T-13-2

| Error code | Major cause/detection | Remedy |
|------------|-----------------------|--|
| E225 | CIS lamp has a fault. | - Turn the power OFF and then back ON.. - Replace the CIS unit. |

Printer error code

T-13-3

| Error code | Major cause/detection | Remedy |
|------------|---|---|
| E000 | The thermistor has an open circuit or a short circuit. | <ul style="list-style-type: none"> - Check the connector of the fixing film unit. - Replace the fixing film unit. - Replace the High-voltage PCB. - Replace the DCNT PCB. |
| | The heater has an open circuit. The thermal fuse has blown. | |
| | The High-voltage PCB has a fault. | |
| | The DCNT PCB has a fault. | |
| E100 | The scanner assembly has a fault. | <ul style="list-style-type: none"> - Check the connector of the laser scanner assembly. - Replace the laser scanner assembly. - Replace the HVT unit. - Replace the DCNT PCB. |

Communication error code

T-13-4

| Error Code | Description |
|------------|--|
| 0001 | Nothing G3 signal received within 35 sec. |
| 0003 | Received DIS after sending DIS signal |
| 0004 | Received DCN after sending DTC signal |
| 0009 | Can't receive any signal within 35 sec. in manual polling mode. |
| 0010 | Received DCN signal after sending DTC signal in Polling Rx. |
| 0011 | Can't receive any correct response after sending DTC signal. |
| 0012 | Remote side Password not match in Polling Rx/our side no any file to be polling. |
| 0013 | Can't receive carrier within 6 sec. after sending CFR in date phase C. |
| 0014 | Can't receive T.30 signal after sending FTT signal. |

| Error Code | Description |
|------------|---|
| 0016 | Receive DCN signal after sending PTT signal. |
| 0017 | Can't receive any response from remote side after sending DIS |
| 0018 | Can't detect energy within 6 sec after sending FTT command |
| 0019 | Received DCN signal sending CFR signal |
| 001A | No energy on line over 6 sec. within phase C before any corrected ECM frame. |
| 001D | Can't detect flag after sending CFR signal |
| 001E | Timeout in V.17 ECM Rx phase C |
| 0020 | Can't correct frame within 6 sec at phase C. |
| 0021 | File full. |
| 0022 | Owing to noise interference on the line, receiving side can't receive correct data within specified time (no ECM) |
| 0023 | Can't receive correct signal after sending CFR signal |
| 0030 | Can't receive any signal within 6 sec. At phase D. |
| 0031 | Received incorrect signal at phase D (not EOP, MPS, EOM, DCN, PPS_Q, PPS_Q,etc) |
| 0032 | Can't receive carrier within 6 sec after sending MCF or RTP, RTN signal |
| 0033 | Received DCN signal at ohase D within pages (not last page). |
| 0039 | In non_ECM mode, when machine alredy received the data dosen't receive 13.1 seconds |
| 001F | Can't detect any G3 signal within 35 sec after sending DTC signal |
| 003F | Remote side TSI not define in machine one touch or speed dial direcotry |
| 0040 | Can't receive carrier within 6 sec. after sending CTR. |
| 0041 | Can't receive carrier within 6 sec. after sending PPR. |
| 0042 | Can't receive correct signal after sending RNR signal |
| 0043 | Receive incorrect signal at phase D in ECM mode. |
| 0044 | Can't receive carrier/FSK signal within 6 sec. After sending MCF. In ECM mode. |
| 0047 | Can't receive correct signal or DCN received after sending ERR signal. |
| 0048 | Can't receive correct signal after receive PPS_PRI_Q |
| 004B | Can't detect correct FSK signal even through detected FSK tone within 6 sec. |
| 004C | Handshake fail during re-train or between page in V34 Rx. |
| 004E | Receive DCN signal after sending DIS in V.34. |
| 004F | Remote side disconnected after sending ANSam in V.8 phase. |
| 0050 | Can't receive any correct signal after detected CJ signal in V.8 phase. |
| 0051 | Can't receive phase 3 signal after phase 2 within 20 seconds in V.34. |
| 0053 | Modem disconnect after phase 4 in V.34. |
| 0054 | Remote side disconnect after phase 4 in V.8 |
| 0055 | Receive incorrect signal after sending DIS signal in V.34 |
| 0056 | Modem disconnect after sending CFR in V.34 |
| 0058 | Can't detect image signal within 6 sec after modem enter to primary phase in V.34 |
| 005A | Modem cannot detect any correct ECM frame with 3 minutes in phase C. |
| 005B | Modem can't detect control channel with 12 sec in phase C |
| 005C | Detect busy tone within control channel after phase C. |
| 005D | Modem can't detect any correct ECM frame with 12 sec in phase C. |
| 005E | Can't detect control channel signal after received RCP frame within 6 sec |
| 005F | Can't detect silence after sending JM signal for polling TX function. |
| 0060 | There are no any bulletin files to be polled in V.34. |
| 0061 | Machine cannot detect V.21 or V.8 signal with 35 sec. |
| 0062 | Modem disconnect in phase D after our side sending out flags sequence in control channel. |
| 0063 | Can't receive any flag sequence in control channel within 25 sec in phase D. |
| 0064 | Can't detect any control channel signal in phase D within 60 sec even through energy still on the line. |
| 0065 | Can't detect any control channel signal within 60 sec after detect silience in phase D. |
| 0066 | Can't receive T.30 signal or carrier after sending CFR in V.34. |

| Error Code | Description |
|------------|---|
| 0069 | Capability no match paper size after received is DCS signal. |
| 0070 | User press stop key within receiving. |
| 0071 | Memory full within receiving. |
| 0080 | Can't detect any G3 signal within 35 sec. specified by ITU-T in phase B. |
| 0081 | Received DTC signal in transmission phase. |
| 0082 | Transmitting unit receives a signal other than DIS or DTC. And DCN in phase B. |
| 0083 | Detected FSK signal, but Can't receive any signal within 35 sec. |
| 0084 | Detect DCN signal in phase B. |
| 0085 | Transmitting unit sending DCS 3 times consecutively, but each time responds with DIS/DTC |
| 0086 | Detected responds signal other than DTC,DIS,FTT,DCN or CFR after sending DCS. |
| 0087 | Training attempt has failed because speed unit can't adjust to low lower speed. |
| 0088 | Received DCN signal after sending out DCS signal |
| 008B | Receivers protocol of DIS is received, but it is not compatible with our machine. |
| 008C | Remote side or our side not support capability. |
| 008D | Receivers protocol of DIS is received, but remote side can't receive document temporary, may because by run out of paper or other reason. |
| 008F | Modem not ready to received V.34 data within 6 sec after received CFR signal. |
| 0090 | Called side document not ready for our polling. |
| 0091 | Can't receive any commabd after send DCN signal 3 times consecutively |
| 0093 | Received DCN signal after sending out DCN signal |
| 0094 | Time out during transmit ECM frame or RCP command. |
| 0095 | Wrong ID number |
| 0096 | SUBADDRESS/PASSWORD capability not match in polling Rx mode. |
| 009A | Can't detect any signal after sending CI signal. |
| 009D | Remote side hang up before V.34 modem enter phase 2 state in V.34 polling Rx. |
| 009E | Manual Tx over 15 minutes whin in phase C by non-ECM mode. |
| 00A0 | User stop or cancel transmission job. |
| 00A1 | Document JAM within transmission |
| 00AE | Can't finished V.8 procedure or detect V.21 signal after CM signal |
| 00AF | Modem can't enter into control channel after TX side sending out RCP signal for V34 |
| 00B1 | Can't finish V.8 procedure or detect V.21 signal after ANSam signal within 35 sec. |
| 00B2 | Can't detect phase 2 signal after our side sending CJ signal within 30 sec |
| 00B3 | Can't detect correct V.21 or JM signal after sending CM or CJ signal. |
| 00B4 | Can't detect correct phase 2 signal within 25 second after CM/JM signal exchange. |
| 00B5 | Can't detect phase 3 signal after Phase 2 |
| 00B6 | Can't detect phase 4 signal within 25 sec after CM/JM exchange. |
| 00B8 | Remote side disconnect after our side sending DCS signal in V.34. |
| 00BA | Cannot received correct signal after our side sending DTC signal in V.34. |
| 00BB | Every time our side received DIS signal after sending DTC in V.34. |
| 00BC | Modem can't ready within 10 second after entering primary channel in V.34. |
| 00BD | Can't detect correct V.21 or JM signal after detected FSK frequency. |
| 00BE | Remote side no document to be polled after V.8 handshaking. |
| 00BF | Capability no match after V.8 handshaking |
| 00C1 | At phase-D, transmitting units out EOP 3 times consecutively, but receive no answer from receiving unit. |
| 00C2 | Remote side disconnect after sending out V.8 CM signal. |
| 00C4 | After sending MPS signal, the received is not one of MCF, RTN, PIP, PIN, RTP, DCN. |
| 00C5 | Received DCN signal after sending MPS signal. |
| 00C9 | At phase D, sending MPS 3 times consecutively, but no answer from receiveing unit. |
| 00CA | After sending EOP signal, the received is not one of MCF, RTN, PIP, PIN, PRI-EOP, DCN, RTP. |
| 00CB | After sending EOP signal, the received is DCN signal. |

| Error Code | Description |
|------------|---|
| 00CF | Received incorrect signal after sending DTC signal for V.34 polling. |
| 00D0 | Received ERR signal after sending EOR_NULL. |
| 00D1 | Received incorrect response after sending PPS_EOP signal |
| 00D2 | Received DCN after sending PPS_EOP signal |
| 00D3 | Received DCN after sending PPS_NULL signal |
| 00D8 | Can't detect correct phase 3 signal for poling. |
| 00D9 | Can't detect correct phase 3 signal after detect silence after phase 2. |
| 00DA | Can't detect phase 4 signal within 30 sec. |
| 00DB | Can't received any T.30 signal within 30 sec within phase 4. |
| 00DC | Received T.30 signal in phase 4 other than DCS, DIS or DTC |
| 00DE | Remote side no SUB capability. |
| 00E0 | At phase-D, transmitting units out PPS_NULL 3 times consecutively but receive not answer. |
| 00E1 | Received incorrect response after sending PPS_NULL. |
| 00E2 | Can't receive any response in RR response procedure after sending PPS_NULL. |
| 00E4 | At phase D, transmitting units out PPS_MPS 3 times consecutivery but receive no answer. |
| 00E5 | Received incorrect response after sending PPS_MPS signal |
| 00E6 | Can't receive any response in RR response procedure after sending PPS_MPS. |
| 00E7 | Reseived DCN after sending PPS_MPS. |
| 00E8 | At phase-D, transmitting units out PPS_EOP 3 times consecutively but receive no answer. |
| 00E9 | Receive PIN signal after sent last page data. |
| 00EA | Can't receive any response in RR response procedure after sending PPS_EOP. |
| 00EE | At phase-D, transmitting units out EOR_NULL 3 times consecutively but receive no answer. |
| 00EF | Received incorrect response after sending EOR_NULL. |
| 00F0 | Can't receive any response in RR response procedure after sending EOR_NULL. |
| 00F1 | At phasa-D, transmitting units out EOR_MPS 3 times consecutively but receive no answer. |
| 00F2 | Received incorrect response after sending EOR_MPS. |
| 00F3 | Received ERR signal after sending EOR_MPS. |
| 00F4 | Can't receive any response in RR response procedure after sending EOR_MPS. |
| 00F5 | At phasa-D, transmitting units out EOR_EOP 3 times consecutively but receive no answer. |
| 00F6 | Received incorrect response after sending EOR_EOP |
| 00F7 | After Received ERR, our side can't received response after sending EOR_EOP command. |
| 00FC | Can't receive any response after sending CTC. |
| 00FD | Can't speed down to lower speed. |
| 00FE | Memory full for transmission |
| 00FF | REDAIL ALL FAIL |

14.1 Outline

14.1.1 Setting Service Data

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Service Mode contains the following service data items. Each service data can be viewed or modified using the menu items displayed on the screen.

SERVICE'S CHOICE

Contains items such as service data, formatting to the user data, data transmission / reception speed setting etc.

ADJUST

Contains a margin adjustment item in printing and scanning.

VERSION DISPLAY

Displays version information on the screen.

SOFT SWITCH

Contains basic service function setting items for facsimile such as communication trouble measure.

REPORT

Generates service reports.

CLEAR DATA

Formats each data.

FUNCTION

Runs print pattern output and ADF feeding tests.

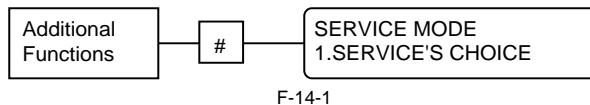

H/W TEST

Runs sensor tests and key tests.

14.1.2 How to Activate Service Mode

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

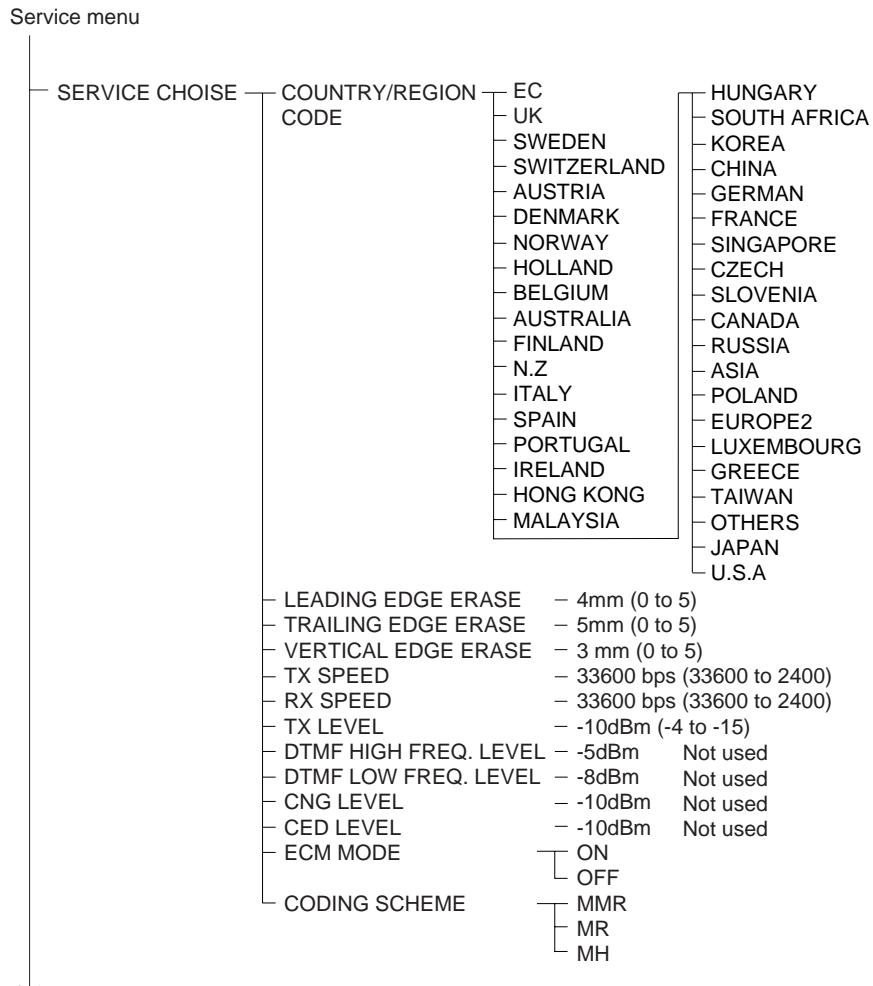

The following flow chart shows how to activate Service Mode.

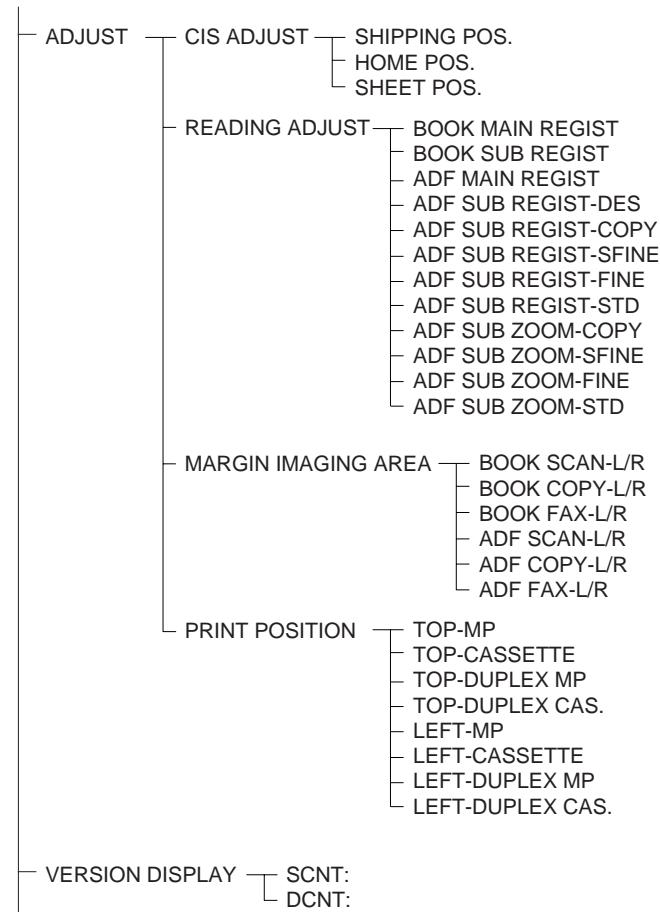

F-14-1

F-14-5

14.2 Service Soft Switch Settings (SSSW)

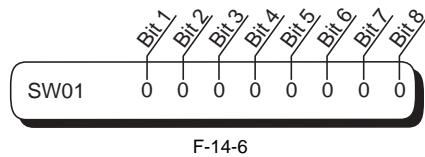

14.2.1 Outline

14.2.1.1 SOFT SWITCH Explained

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Each entry / setting item of SOFT SWITCH consists of 8 bitswitches. Each bitswitch displayed on the screen has an assigned number as shown in the figure below.

Each Bit has a value - either 0 or 1.

Shown below is what each number and data indicates in the bitswitch table.

| Bit | Function | 1 | 0 |
|-----|------------------------|--------|-----|
| 1 | Not in Use | | |
| 2 | Not in Use | | |
| 3 | Original Reading Width | Letter | A4* |
| 4 | Not in Use | | |
| 5 | Not in Use | | |
| 6 | Not in Use | | |
| 7 | Not in Use | | |
| 8 | Not in Use | | |

Annotations with arrows point to the '1' and '0' values:

- An arrow points to the '1' in the 'Function' column under Bit 3, with the text "Indicates the set value is '1.'"
- An arrow points to the '0' in the 'Function' column under Bit 3, with the text "Indicates the set value is '0.'
- An arrow points to the 'A4*' in the 'Function' column under Bit 3, with the text "Indicates this is the default setting."

F-14-7

14.2.2 SSSW-SW02:

14.2.2.1 Function List

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

T-14-1

| Bit | Function | 1 | 0 |
|-----|-----------------------------|-----------|---------------|
| 1 | Not in Use | - | - |
| 2 | RTN Transmission Condition | 1 | 0* |
| 3 | RTN Transmission Condition | 1 | 0* |
| 4 | Not in Use | - | - |
| 5 | Change the Message Language | Displayed | Not displayed |
| 6 | Not in Use | - | - |
| 7 | Not in Use | - | - |
| 8 | Not in Use | - | - |

14.2.2.2 Bit 2 and 3 Elaborated

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

If errors resulting from RTN signal transmission occur frequently while receiving, increase the parameter and ease the RTN transmission condition. The RTN transmission condition is defined as a percentage of the number of error lines in the total number of lines of a received image page. It is a combination of Bit 2 and Bit 3 and the percentages are shown below.

T-14-2

| | |
|---------------|------------|
| (Bit2, Bit3)= | (0, 0) 10% |
| | (1, 0) 15% |
| | (0, 1) 20% |
| | (1, 1) 25% |

14.2.2.3 Bit 5 Elaborated

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

If 'displayed' is selected, an item is added to the user data so that the message language can be changed. By doing so, the language in which messages displayed on the screen and printed on the reports can be selected from a list of languages.

14.2.3 SSSW-SW04

14.2.3.1 Function List

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

T-14-3

| Bit | Function | 1 | 0 |
|-----|---|----|-------|
| 1 | Not in Use | - | - |
| 2 | Not in Use | - | - |
| 3 | Not in Use | - | - |
| 4 | Not in Use | - | - |
| 5 | Not in Use | - | - |
| 6 | Not in Use | - | - |
| 7 | Not in Use | - | - |
| 8 | Alarm at the Completion of Transmission | ON | OFF * |

14.2.3.2 Bit 8 Elaborated

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

An alarm can be set to go off when the transmission has been completed without a problem. Change the setting to ON in order to activate this alarm.

14.2.4 SSSW-SW10

14.2.4.1 Function List

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

T-14-4

| Bit | Function | 1 | 0 |
|-----|-----------------------------------|-----------|------------|
| 1 | Alarm at Termination due to Error | ON * | OFF |
| 2 | Page Timer in Manual Sending | 8 minutes | No Limit * |
| 3 | Not in Use | - | - |
| 4 | Not in Use | - | - |
| 5 | Not in Use | - | - |
| 6 | Not in Use | - | - |
| 7 | Not in Use | - | - |
| 8 | Not in Use | - | - |

14.2.4.2 Bit 1 Elaborated

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

An alarm goes off when the transmission has been terminated due to some error. Change the setting to OFF in order to make this alarm inactive.

14.2.4.3 Bit 2 Elaborated

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

Enables to select a page timer used during manual sending.

14.2.5 SSSW-SW16**14.2.5.1 Function List**

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

T-14-5

| Bit | Function | 1 | 0 |
|-----|------------------------|--------|-----|
| 1 | Not in Use | - | - |
| 2 | Not in Use | - | - |
| 3 | Original Reading Width | Letter | A4* |
| 4 | Not in Use | - | - |
| 5 | Not in Use | - | - |
| 6 | Not in Use | - | - |
| 7 | Not in Use | - | - |
| 8 | Not in Use | - | - |

14.2.6 SSSW-SW20**14.2.6.1 ã@ñáíóó**

14.3 Test Mode (TEST)

14.3.1 Overview

14.3.1.1 Outline of test mode

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

The static test mode can be operated according to the menu item displayed on the display.

Print test

The test pattern is printed in the print area.

H/W TEST

The function of the sensor and the operation panel can test.

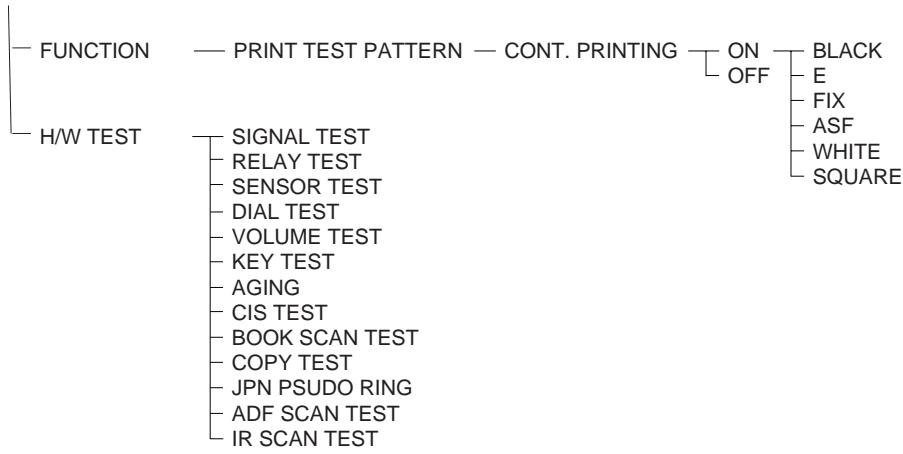

14.3.1.2 Test mode menu

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

To operate the test mode,

- 1) Push the additional functions key and # key to enter SERVICE MODE.
- 2) Select FUNCTION or H/W TEST by the cursor button, and push the OK button.

Stopbotaning is pushed when coming off the test mode.

F-14-8

14.3.2 Faculty Test

14.3.2.1 Print test pattern

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

From the FUNCTION menu, select PRINT TEST PATTERN.

In this test, the printer unit will be used to print various patterns. For service work, be sure to use the BLACK pattern and the SQUARE pattern. Use the BLACK print pattern to make sure that the printout is free of white lines and unevenness; on the other hand, use the SQUARE printout to make sure that the printout is free of image contraction, elongation, and soiling.

MEMO

After completion of the print test, if the printing was normal, copy a document. If there is any defect in the copied image, there is a defect in the scan section.

14.3.2.2 MçÜEeEXÉg

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

14.3.2.3 Sensor test

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

SENSOR TEST is selected from the H/W TEST menu. In this test, the state of each sensor of this machine can be checked on the display. For the sensor that uses the sensor arm and the microswitch, the output of the sensor can be confirmed by moving them by the hand.

T-14-19

| Test | Function | Action |
|-----------------|----------------------------|------------------------|
| HOOK 1/2 DETECT | Handset status | OFF:inactive ON:Active |
| ADF DS TEST | ADF detect | OFF:inactive ON:Active |
| ADF DES TEST | ADF detect | OFF:inactive ON:Active |
| CRG TEST | Toner Cartridge detect | OFF:inactive ON:Active |
| TN Value | Display Toner remain value | from 0 to 127 |
| RING DETECT | Ring detect | OFF:inactive ON:Active |

14.3.2.4 Key test

i-SENSYS MF4300dn / i-SENSYS MF4350d / i-SENSYS MF4380dn / i-SENSYS MF4310/4318 / i-SENSYS MF4320d / i-SENSYS MF4330d / i-SENSYS MF4340d / i-SENSYS D450d / i-SENSYS MF4370dn

KEY TEST is selected from the H/W TEST menu. In this test, whether the button on the operation panel works correctly can be checked.

Operation key test

In this test, the character on the display disappears when the key corresponding to the character is pushed. The correspondence table of the character and the key is as follows.

When the key is pushed for all keys, it is checked that the corresponding character on the display disappears.

T-14-20

| Character | Operation button | Character | Operation button | Character | Operation button |
|-----------|----------------------------|-----------|---------------------|-----------|--|
| 0-9,*,# | Numeric key, tone key | K | [Start] key | V | [Hook] key |
| A | [COPY] key | L | [Clear] key | a | One-Touch Speed Dial [01] key |
| B | [SCAN] key | M | [Energy Saver] key | b | One-Touch Speed Dial [02] key |
| C | [Additional Functions] key | N | [View Settings] key | c | One-Touch Speed Dial [03] key |
| D | [System Monitor] key | O | [2-Sided] key | d | One-Touch Speed Dial [04] key |
| E | [Enlarge/Reduce] key | P | [Toner Gauge] key | e | One-Touch Speed Dial [05] key |
| F | [Density] key | Q | [OK] key | f | One-Touch Speed Dial [06] key |
| G | [Image Quality] key | R | [FAX] key | g | One-Touch Speed Dial [07] key |
| H | [Collate/2 on 1] key | S | [Address Book] key | h | One-Touch Speed Dial [08] key or [Reset] key |

| Character | Operation button | Character | Operation button | Character | Operation button |
|-----------|------------------|-----------|--------------------|-----------|------------------|
| I | [+] key | T | [Coded Dial] key | | |
| J | [-] key | U | [Redial/Pause] key | | |

One-touch dial key test

When the OK button is pushed, it becomes an one-touch dial key test.

The a thorough h characters corresponding to One-touch01 through 08 key are displayed. The character corresponding to respectively disappears when an one-touch key is pushed. Check that all characters disappear after all one-touch keys are pressed.
