

Service Manual

iPF5000 series

Canon

May 24 2007

Application

This manual has been issued by Canon Inc. for qualified persons to learn technical theory, installation, maintenance, and repair of products. This manual covers all localities where the products are sold. For this reason, there may be information in this manual that does not apply to your locality.

Corrections

This manual may contain technical inaccuracies or typographical errors due to improvements or changes in products. When changes occur in applicable products or in the contents of this manual, Canon will release technical information as the need arises. In the event of major changes in the contents of this manual over a long or short period, Canon will issue a new edition of this manual.

The following paragraph does not apply to any countries where such provisions are inconsistent with local law.

Trademarks

The product names and company names used in this manual are the registered trademarks of the individual companies.

Copyright

This manual is copyrighted with all rights reserved. Under the copyright laws, this manual may not be copied, reproduced or translated into another language, in whole or in part, without the written consent of Canon Inc.

Caution

Use of this manual should be strictly supervised to avoid disclosure of confidential information.

Symbols Used

This documentation uses the following symbols to indicate special information:

Symbol	Description
	Indicates an item of a non-specific nature, possibly classified as Note, Caution, or Warning.
	Indicates an item requiring care to avoid electric shocks.
	Indicates an item requiring care to avoid combustion (fire).
	Indicates an item prohibiting disassembly to avoid electric shocks or problems.
	Indicates an item requiring disconnection of the power plug from the electric outlet.
 Memo	Indicates an item intended to provide notes assisting the understanding of the topic in question.
 REF.	Indicates an item of reference assisting the understanding of the topic in question.
	Provides a description of a service mode.
	Provides a description of the nature of an error indication.

The following rules apply throughout this Service Manual:

1. Each chapter contains sections explaining the purpose of specific functions and the relationship between electrical and mechanical systems with reference to the timing of operation.

In the diagrams,  represents the path of mechanical drive; where a signal name accompanies the symbol, the arrow  indicates the direction of the electric signal.

The expression "turn on the power" means flipping on the power switch, closing the front door, and closing the delivery unit door, which results in supplying the machine with power.

2. In the digital circuits, '1' is used to indicate that the voltage level of a given signal is "High", while '0' is used to indicate "Low". (The voltage value, however, differs from circuit to circuit.) In addition, the asterisk (*) as in "DRMD*" indicates that the DRMD signal goes on when '0'.

In practically all cases, the internal mechanisms of a microprocessor cannot be checked in the field. Therefore, the operations of the microprocessors used in the machines are not discussed: they are explained in terms of from sensors to the input of the DC controller PCB and from the output of the DC controller PCB to the loads.

The descriptions in this Service Manual are subject to change without notice for product improvement or other purposes, and major changes will be communicated in the form of Service Information bulletins.

All service persons are expected to have a good understanding of the contents of this Service Manual and all relevant Service Information bulletins and be able to identify and isolate faults in the machine."

Contents

Chapter 1 PRODUCT DESCRIPTION

1.1 Product Overview	1- 1
1.1.1 Product Overview	1- 1
1.1.2 Product Overview	1- 1
1.2 Features	1- 3
1.2.1 Features	1- 3
1.2.2 Features	1- 3
1.2.3 Printhead	1- 3
1.2.4 Ink Tank	1- 3
1.2.5 Cutter	1- 5
1.2.6 Auto Roll Feed Unit	1- 5
1.2.7 Roll Feed Unit	1- 5
1.2.8 Stand/Desktop Basket	1- 7
1.2.9 IEEE1394 (FireWire) Board	1- 7
1.2.10 Consumables	1- 8
1.2.11 Consumables	1- 9
1.3 Product Specifications	1- 10
1.3.1 Product Specifications	1- 10
1.3.2 Product Specifications	1- 11
1.4 Detailed Specifications	1- 12
1.4.1 Printing Speed and Direction	1- 12
1.4.2 Print Speed and Direction	1- 13
1.4.3 Interface Specifications	1- 19
1.5 Names and Functions of Components	1- 20
1.5.1 Front	1- 20
1.5.2 Front	1- 20
1.5.3 Rear	1- 22
1.5.4 Top Cover (Inside)	1- 22
1.5.5 Manual Loading Area	1- 23
1.5.6 Roll Feed Unit Cover (Inside)	1- 23
1.5.7 Carriage	1- 24
1.5.8 Carriage	1- 24
1.5.9 Inside	1- 25
1.5.10 Inside	1- 26
1.6 Basic Operation	1- 27
1.6.1 Operation Panel	1- 27
1.6.2 Operation Panel	1- 28
1.6.3 Printer Stats Transition	1- 30
1.6.4 Main Menu	1- 30
1.6.5 Main Menu	1- 37
1.7 Safety and Precautions	1- 56
1.7.1 Safety Precautions	1- 56
1.7.1.1 Moving Parts	1- 56
1.7.1.2 Adhesion of Ink	1- 56
1.7.1.3 Electric Parts	1- 57
1.7.1.4 Electric Parts	1- 58
1.7.2 Other Precautions	1- 58
1.7.2.1 Printhead	1- 58
1.7.2.2 Ink Tank	1- 59
1.7.2.3 Handling the Printer	1- 60
1.7.3 Precautions When Servicing Printer	1- 63

1.7.3.1 Notes on the Data Stored in the Printer	1- 63
1.7.3.2 Confirming the Firmware Version	1- 63
1.7.3.3 Precautions against Static Electricity	1- 63
1.7.3.4 Precautions for Disassembly/Reassembly	1- 63
1.7.3.5 Self-diagnostic Feature	1- 63
1.7.3.6 Disposing of the Lithium Battery	1- 63

Chapter 2 TECHNICAL REFERENCE

2.1 Basic Operation Outline	2- 1
2.1.1 Printer Diagram	2- 1
2.1.2 Printer Diagram	2- 2
2.1.3 Print Signal Sequence	2- 3
2.1.4 Print Driving	2- 4
2.2 Firmware	2- 6
2.2.1 Operation Sequence at Power-on	2- 6
2.2.2 Operation Sequence at Power-off	2- 6
2.2.3 Print Control	2- 7
2.2.4 Print Control	2- 8
2.2.5 Print Position Adjustment Function	2- 14
2.2.6 Head Management	2- 14
2.2.7 Printhead Overheating Protection Control	2- 14
2.2.8 Pause between Pages	2- 14
2.2.9 White Raster Skip	2- 14
2.2.10 Sleep Mode	2- 14
2.3 Printer Mechanical System	2- 15
2.3.1 Outline	2- 15
2.3.1.1 Outline	2- 15
2.3.2 Ink Passage	2- 16
2.3.2.1 Ink Passage	2- 16
2.3.2.2 Ink Tank Unit	2- 18
2.3.2.3 Carriage Unit	2- 20
2.3.2.4 Printhead	2- 26
2.3.2.5 Purge Unit	2- 27
2.3.2.6 Maintenance Cartridge	2- 32
2.3.2.7 Air Flow	2- 33
2.3.3 Paper Path	2- 35
2.3.3.1 Outline	2- 35
2.3.3.2 Paper Path	2- 36
2.3.3.3 Cutter Unit	2- 53
2.4 Printer Electrical System	2- 54
2.4.1 Outline	2- 54
2.4.1.1 Overview	2- 54
2.4.2 Main Controller	2- 56
2.4.2.1 Main controller components	2- 56
2.4.2.2 Main controller components	2- 57
2.4.3 Carriage Relay PCB	2- 59
2.4.3.1 Carriage PCB components	2- 59
2.4.4 Motor Driver	2- 59
2.4.4.1 Cutter driver PCB components	2- 59
2.4.4.2 Roll feed unit PCB components	2- 59
2.4.5 Maintenance Cartridge Relay PCB	2- 60
2.4.5.1 Maintenance cartridge relay PCB components	2- 60
2.4.6 Power Supply	2- 60
2.4.6.1 Power supply block diagram	2- 60
2.5 Detection Functions with Sensors	2- 60
2.5.1 Sensors for covers	2- 60
2.5.2 Ink passage system	2- 62

2.5.3 Carriage system	2- 64
2.5.4 Carriage system	2- 65
2.5.5 Paper path system.....	2- 66
2.5.6 Others.....	2- 69

Chapter 3 INSTALLATION

3.1 Installation	3- 1
3.1.1 Making Pre-Checks	3- 1
3.1.1.1 Making Pre-Checks.....	3- 1
3.1.1.2 Making Pre-Checks.....	3- 1
3.1.2 Unpacking and Installation	3- 2
3.1.2.1 Unpacking and Installation.....	3- 2
3.1.2.2 Unpacking and Installation.....	3- 10
3.1.2.3 Installing the Stand	3- 18
3.1.2.4 Installing the Stand	3- 25
3.1.2.5 Installing the Desktop Basket.....	3- 34
3.1.2.6 Installing the Desktop Basket.....	3- 37
3.1.3 Checking the Images/Operations	3- 41
3.1.3.1 Checking the Images /Operations.....	3- 41
3.2 Transporting the Printer	3- 42
3.2.1 Transporting the Printer.....	3- 42
3.2.1.1 Transporting the Printer	3- 42
3.2.2 Reinstalling the Printer	3- 43
3.2.2.1 Reinstalling the Printer.....	3- 43

Chapter 4 DISASSEMBLY/REASSEMBLY

4.1 Service Parts	4- 1
4.1.1 Service Parts	4- 1
4.2 Disassembly/Reassembly.....	4- 1
4.2.1 Disassembly/Reassembly	4- 1
4.2.2 Disassembly/Reassembly	4- 3
4.3 Points to Note on Disassembly and Reassembly	4- 3
4.3.1 Note on assemblies (or units) prohibited from disassembly	4- 3
4.3.2 Moving the carriage manually.....	4- 3
4.3.3 Units requiring draining of ink	4- 3
4.3.4 External Covers	4- 5
4.3.5 External Covers	4- 12
4.3.6 Driving Unit	4- 22
4.3.7 Cutter	4- 23
4.3.8 Carriage Unit	4- 25
4.3.9 Carriage Unit	4- 29
4.3.10 Feeder Unit	4- 37
4.3.11 Roll Feed Unit.....	4- 42
4.3.12 Purge Unit.....	4- 45
4.3.13 Purge Unit.....	4- 46
4.3.14 Waste Ink Collection Unit.....	4- 49
4.3.15 Ink Tank Unit.....	4- 52
4.3.16 Head Management Sensor	4- 55
4.3.17 Multi Sensor	4- 55
4.3.18 PCBs.....	4- 57
4.3.19 Opening the Cap/Moving the Wiper Unit	4- 60
4.3.20 Opening the Cap/Moving the Wiper Unit	4- 60
4.3.21 Opening/Closing the Ink Supply Valve	4- 62
4.3.22 Draining the Ink.....	4- 63
4.4 Applying the Grease	4- 64

4.4.1 Applying the Grease	4- 64
4.5 Adjustment and Setup Items	4- 71
4.5.1 Adjustment Item List	4- 71
4.5.2 Procedure after Replacing the Feed Roller HP Sensor or Feed Roller Encoder	4- 71
4.5.3 Procedure after Replacing the Carriage Unit or Multi Sensor	4- 71
4.5.4 Procedure after Replacing the Head Management Sensor	4- 74

Chapter 5 MAINTENANCE

5.1 Periodic Replacement Parts	5- 1
5.1.1 Periodic Replacement Parts	5- 1
5.2 Consumable Parts	5- 1
5.2.1 Consumable Parts	5- 1
5.2.2 Consumable Parts	5- 1
5.3 Periodic Maintenance	5- 2
5.3.1 Periodic Maintenance	5- 2
5.3.2 Periodic Maintenance	5- 2

Chapter 6 TROUBLESHOOTING

6.1 Troubleshooting	6- 1
6.1.1 Outline	6- 1
6.1.1.1 Outline of Troubleshooting	6- 1
6.1.2 Troubleshooting When Warnings Occur	6- 1
6.1.2.1 Ink Lvl: Chk XX (1000,1001,1002,1003,1004,1005,1006,1008,1009,100A,100B,100C)	6- 1
6.1.2.2 MTCart Full Soon (1100)	6- 1
6.1.2.3 Mist Full Soon (1101)	6- 1
6.1.2.4 GARO W12xx: xx stands for digits (1221,1222,1223,1225,1231,1232,1233,1234,1235)	6- 1
6.1.2.5 Feed Limit... (100F)	6- 2
6.1.2.6 Check printed document.(1010)	6- 2
6.1.3 Troubleshooting When Errors Occur	6- 2
6.1.3.1 01800500-1012/01800500-1013 Defective printhead nozzle	6- 2
6.1.3.2 03010000-200C/03010000-2017/03010000-2018/03016000-2010 Multi sensor error	6- 2
6.1.3.3 03010000-200D Cut sheet end cannot be detected	6- 2
6.1.3.4 03010000-2820/03010000-2821/03010000-2822/03010000-2823/03130031-2F32/03010000-2F33 Adjustment error	6- 3
6.1.3.5 03010000-2E1F/03060000-2E14/03061000-2E15/03060000-2E16/03060200-2E03/03060200-2E0B/03060A00-2E00/ 03060A00-2E01/03860002-2E0A Path mismatch error	6- 3
6.1.3.6 03010000-2E25/03010000-2E27 Paper feed/delivery jam error	6- 3
6.1.3.7 03030000-2E21 IEEE1394 error	6- 4
6.1.3.8 03060A00-2E0E Roll media unit uninstallation	6- 4
6.1.3.9 03060A00-2E1B Roll media end error	6- 4
6.1.3.10 03130031-291B Lift home position error	6- 4
6.1.3.11 03130031-291D Supr cam sensor error	6- 5
6.1.3.12 03130031-2E23 Cutter unit breakdown	6- 5
6.1.3.13 03130031-2F13 A/D Converter external trigger output stopped	6- 5
6.1.3.14 03130031-2F14 ASIC Register cannot be written	6- 5
6.1.3.15 03130031-2F16 Mist fan error	6- 5
6.1.3.16 03130031-2F17 Suction fan error	6- 6
6.1.3.17 03130031-2F20/03130031-2F28/03130031-2F22/03130031-2F23 Defective sensor in purge unit	6- 6
6.1.3.18 03130031-2F24 Cutter drive time-out error	6- 6
6.1.3.19 03130031-2F25 Carriage home position error	6- 6
6.1.3.20 03130031-2F26/03130031-2F27 Carriage motor error	6- 7
6.1.3.21 03130031-2F2A Feed roller home position error	6- 7
6.1.3.22 03130031-2F2D The cassette cannot work	6- 7
6.1.3.23 03130031-2F2E Roll drive time-out error	6- 7
6.1.3.24 03130031-2F3A Valve open/close error	6- 8
6.1.3.25 03180003-2E22 MIT error	6- 8
6.1.3.26 03180101-2E17 Cassette uninstallation	6- 8
6.1.3.27 03800200-2802/03800400-2803/03800300-2801/03800201-280A/03800401-280B/03800301-2809/03800200-2804/	

03800202-2807 Printhead error	6- 8
6.1.3.28 03800500-2F2F/03800500-2F30 Head management sensor error	6- 9
6.1.3.29 03810101-2501/03810102-2502/03810103-2503/03810104-2500/03810105-2508/03810106-2506/03810107-250A/ 03810108-250C/03810109-250B/03810112-2504/03810113-2505/03810115-2509 No ink error.....	6- 9
6.1.3.30 03810201-2581/03810204-2580/03810202-2582/03810203-2583/03810212-2584/03810213-2585/03810206-2586/ 03810205-2588/03810215-2589/03810207-258A/03810209-258B/03810208-258C Tank level error 1	6- 9
6.1.3.31 03810201-2591/03810204-2590/03810202-2592/03810203-2593/03810212-2594/03810213-2595/03810206-2596/ 03810205-2598/03810215-2599/03810207-259A/03810209-259B/03810208-259C Tank level error 2	6- 9
6.1.3.32 03830101-2521/03830104-2520/03830102-2522/03830103-2523/03830112-2524/03830113-2525/03830106-2526/ 03830105-2528/03830115-2529/03830107-252A/03830109-252B/03830108-252C Ink tank is not installed. (This error occurs when the ink tank is replaced.)	6- 10
6.1.3.33 03830201-2541/03800204-2540/03830202-2542/03830203-2543/03830212-2544/03830213-2545/03830206-2546/ 03830205-2548/03830215-2549/03830207-254A/03830209-254B/03830208-254C Invalid ink tank ID.....	6- 10
6.1.3.34 03830301-2561/03830304-2560/03830302-2562/03830303-2563/03830312-2564/03830313-2565/03830306-2566/ 03830305-2568/03830305-2568/03830315-2569/03830307-256A/03830309-256B/03830308-256C Ink tank EEPROM error.	6- 10
6.1.3.35 03841001-2819/03841201-2816/03841201-2817/03841101-2818/01841001-281B Maintenance cartridge error.....	6- 10
6.1.3.36 03861001-2405/03861001-2406 Borderless printing error	6- 11
6.1.3.37 03862000-2E09 Insufficient roll media error	6- 11
6.1.3.38 03870001-2015 Cut error.....	6- 11
6.1.3.39 E194-4034 Sensor calibration error	6- 11
6.1.4 Troubleshooting When Service Call Errors Occur	6- 12
6.1.4.1 Outline.....	6- 12
6.1.4.2 E141-4046 Recovery system rotation count reached 50,000.	6- 12
6.1.4.3 E144-4047 Supply system's count error	6- 12
6.1.4.4 E146-4001 Borderless/idle ejection/mist collection count full	6- 12
6.1.4.5 E194-404A Non-discharge detection count error.....	6- 12
6.1.4.6 E161-403E/E196-403F Abnormally high head temperature	6- 12
6.1.4.7 E196-4040/E196-4041/E196-4042/E196-4045/E196-4049 main controller PCB error	6- 13
6.1.4.8 E198-401C/E198-401D/E198-401E RTC error.....	6- 13
6.2 Location of Connectors and Pin Arrangement.....	6- 13
6.2.1 Main controller PCB.....	6- 13
6.2.2 Main controller PCB.....	6- 24
6.2.3 Carriage PCB	6- 36
6.2.4 Carriage PCB	6- 43
6.2.5 Cutter driver PCB	6- 52
6.2.6 Power supply	6- 52
6.2.7 Power supply	6- 54
6.2.8 Roll feed unit PCB	6- 54
6.3 Version Up	6- 56
6.3.1 Firmware Update Tool	6- 56
6.4 Service Tools	6- 57
6.4.1 Tool List	6- 57

Chapter 7 SERVICE MODE

7.1 Service Mode	7- 1
7.1.1 Service Mode Operation.....	7- 1
7.1.2 Map of the Service Mode.....	7- 2
7.1.3 Details of Service Mode.....	7- 7
7.1.4 Sample Printout	7- 15
7.2 Special Mode	7- 19
7.2.1 Special Modes for Servicing	7- 19

Chapter 8 ERROR CODE

8.1 Outline	8- 1
8.1.1 Outline	8- 1
8.2 Error Table.....	8- 1
8.2.1 Error Code List	8- 1

8.3 Service Call Table	8- 4
8.3.1 Service Call Errors	8- 4

1.1 Product Overview

1.1.1 Product Overview

iPF5000

This printer is capable of printing on A4- to A2-size cut sheets and its maximum print width is 17 inches. This printer is a desktop large-format printer twelve-colors (pigment-based colors) printer that can be used to print office documents as well as handy POP and posters. An auto roll feed unit is optionally available for printing on roll media.

1.2 Features

1.2.1 Features

iPF5000

- One-inch wide printhead having 2,560 nozzles per color, which are twice as many as the those of the existing models. High-density printhead technology "FINE" that can satisfy both of beautiful and fast printing requirements of a high order is employed for accurate ejection of ultrasmall 4-pl drops of ink to the target positions. Prints with 2400 x 1200 dpi resolution can be made at a high speed.
- Imaging processor "L-COA" incorporated for high-speed image data processing. High-speed processing of 12-color, 2-bit large-size images and printer control for high-accuracy operation of high-density double head can be performed with a single chip.
- Support for roll media (option), cassette paper pick-up, manual feed from front, and manual feed from top (4-way paper supply). A maximum of 1.5 mm thick of paper can be manually fed from the front.
- Borderless printing on and auto cutting of roll media (option)
- Standard support for 10Base-T/100Base-TX. Standard support for USB 2.0 High-Speed. Optional support for IEEE1394.
- Data scanned using CanoScan can be easily printed on large-size paper just like a dedicated copier. Just pressing the Start button allows you to blow up an original of up to A3 size in collaboration with Canon Image RUNNER.
- Support for remote notification utility which is used to send an E-mail when an alarm or error occurs.

1.2.2 Features

iPF5100

- A new 12-color pigmented ink formulation featuring additional three types of special-color inks (red, green, blue) and two types of gray ink varying in grayscale, "Lucia" prints on a variety of grades of paper, from glossy paper to art, mat and sign, with a high degree of coloring.
- Two types of black ink, vividly glossy "black ink" and "mat black ink" full of a sense of high quality, are loaded concurrently and are selected automatically to suit paper types. There is no need to manually change inks.
- BK (black)/GY (gray)/PGY (photo gray) ink are mainly used to offer a drastically enhanced power of halftoning, achieving an equivalent of the high picture quality of monochrome silver-salt films.
- One-inch wide printhead having 2,560 nozzles per color, which are twice as many as the those of the existing models. High-density printhead technology "FINE" that can satisfy both of beautiful and fast printing requirements of a high order is employed for accurate ejection of ultrasmall 4-pl drops of ink to the target positions. Prints with 2400 x 1200 dpi resolution can be made at a high speed.
- Imaging processor "L-COA" incorporated for high-speed image data processing. High-speed processing of 12-color, 2-bit large-size images and printer control for high-accuracy operation of high-density double head can be performed with a single chip.
- Support for roll media, cassette paper pick-up, manual feed from front, and manual feed from top (4-way paper supply). A maximum of 1.5 mm thick of paper (POP Board) can be manually fed from the front.
- Borderless printing on and auto cutting of roll media.
- Standard support for 10Base-T/100Base-TX. Standard support for USB 2.0 High-Speed. Optional support for IEEE1394.
- Data scanned using CanoScan can be easily printed on large-size paper just like a dedicated copier. Just pressing the Start button allows you to blow up an original of up to A3 size in collaboration with Canon Image RUNNER.
- Support for remote notification utility which is used to send an E-mail when an alarm or error occurs.

Functional enhancements new to this model include:

- Higher image quality
- Use of abrasion-resistant inks (MBK, BK, PGY, GY) offers enhanced image durability.
The color calibration feature adds to the faithfulness of color reproduction.

1.2.3 Printhead

iPF5000 / iPF5100

Printhead set on the carriage is a 6-color integral disposable type.

On the printhead, two rows of 1,280 nozzles (total 2,560 nozzles) are arranged in a staggered pattern. .

If print quality does not improve despite carrying out the specified cleaning, the printhead must be replaced with a new one. Generally, it is recommended that the printhead be replaced about 12 months after you have opened the package.

F-1-4

1.2.4 Ink Tank

iPF5000 / iPF5100

The ink tank is disposable.

There are twelve pigment-based ink colors (matte black, black, photo cyan, cyan, photo magenta, magenta, yellow, red, blue, green, gray, and photo gray).

This printer features a mechanism by which only the correct color ink tank will fit in the given slot.

When the message No Ink is displayed, replace the ink tank with a new one. Also, each ink tank should generally be replaced six months after you have opened the package.

F-1-5

1.2.5 Cutter

iPF5000 / iPF5100

A round-blade cuter comes with the cutter unit.

F-1-6

1.2.6 Auto Roll Feed Unit

iPF5000

Auto Roll Feed Unit (option)

The auto roll feed unit is optionally available to use roll media with this printer.

F-1-7

Roll holder set (option)

This set consists of roll holder, holder stopper, 3-inch paper tube attachment (two), and borderless printing spacer (commonly used for 2-inch paper tube and 3-inch paper tube).

[Roll holder]

F-1-8

[Holder stopper]

F-1-9

[3-inch paper tube attachment](2 pcs.)

F-1-10

[Borderless printing spacer]

F-1-11

1.2.7 Roll Feed Unit

iPF5100

Roll Feed Unit

The roll feed unit is optionally available to use roll media with this printer.

F-1-12

Roll holder set

This set consists of roll holder, holder stopper, 3-inch paper tube attachment (two), and borderless printing spacer (commonly used for 2-inch paper tube and 3-inch paper tube).

[Roll holder]

F-1-13

[Holder stopper]

F-1-14

[3-inch paper tube attachment](2 pcs.)

F-1-15

[Borderless printing spacer]

F-1-16

MEMO:

A borderless printing spacer is used to perform borderless printing on A2-size (420 mm) roll media. This printer is furnished with a number of borderless printing ink receiving channels on the platen to address multi-sized borderless printing needs. Borderless printing on A2-size roll media is made possible by using a spacer, without needing to produce a new borderless printing ink receiving channel.

1.2.8 Stand/Desktop Basket

iPF5000 / iPF5100

Stand (option)

It is a stand that puts the printer. Equipped with casters so that the printer can be easily moved. The output stacker included with stand can use by the two ways of the regular position or extended position.

F-1-17

Desktop Basket (option)

It is a basket unit that uses the output stacker in the printer on the desktop. The output stacker can use by the two ways of the regular position or extended position.

F-1-18

MEMO:

Use the output stacker in the regular position [A]. However, for the specified media, it can also be used in the extended position [B]. The media can be removed more easily when the output stacker is in the extended position.

F-1-19

1.2.9 IEEE1394 (FireWire) Board

iPF5000 / iPF5100

IEEE1394 (FireWire) expansion board (option)

An interface board that provides an additional IEEE1394 (FireWire) port.

F-1-20

1.2.10 Consumables

iPF5000

Printhead

The consumable print head is the same as that supplied with the printer.

F-1-21

Ink Tanks

The consumable ink tanks are available in twelve colors (matte black, black, photo cyan, cyan, photo magenta, magenta, yellow, red, blue, green, photo gray, and gray). They are the same as those supplied with the printer. Each ink tank must be replaced with a new one six month after you have opened the package.

F-1-22

Maintenance cartridge

The consumable maintenance cartridge is the same as that supplied with the printer.

F-1-23

1.2.11 Consumables

iPF5100

Printhead

The consumable print head is the same as that supplied with the printer.

F-1-24

Ink Tanks

The consumable ink tanks are available in twelve colors (matte black, black, photo cyan, cyan, photo magenta, magenta, yellow, red, blue, green, photo gray, and gray). They are the same as those supplied with the printer. Each ink tank must be replaced with a new one six months after you have opened the package. The ink tank that can be used with this printer is labeled "H".

F-1-25

Maintenance cartridge

The consumable maintenance cartridge is the same as that supplied with the printer.

F-1-26

1.3 Product Specifications

1.3.1 Product Specifications

iPF5000

Type	Bubble jet large-sized paper printer
Feeding system	Automatic feeding of one roll media (option)/Cassette paper feeding/ One cut sheet (manual feed from front)/One cut sheet (manual feed from top)
Feeding capacity	- Roll media (option) One roll at the back/Outer diameter of roll: 150 mm or less/Inner diameter of paper tube: 2 or 3 inches -Cut sheet Cassette:250 sheets(A4), 100 sheets(A3), 50 sheets(A2), manual feed:1
Delivery method	Delivers the media with its printed side up in the forward direction.
Sheet delivery capability	- Roll media (option) 1 sheet - Cut sheet 50 sheets (plain paper of A3 or smaller) or 20 sheets (plain paper of larger than A3)
Cutter	Automatically cuts paper laterally. Cartridge-type (with round blade)
Type of media	Plain paper, plain paper (high quality), plain paper (vivid color), coated paper, extra heavy coated paper, premium matte paper, high-quality dedicated paper, matte photo paper, photo glossy paper, photo semi-glossy paper, photo glossy paper (heavy), photo semi-glossy paper (heavy), professional photo paper, super photo paper, super photo paper (silky), glossy paper, synthetic paper, adhesive synthetic paper, proofing paper, newspaper proofing paper, tracing paper (CAD), semi-translucent matte film (CAD), POP board
Supported thickness	Roll media: 0.07 to 0.8 mm Cassette: 0.08 to 0.3 mm Manual feed from top: 0.08 to 0.5 mm Manual feed from front: 0.5 to 1.5 mm
Media size (Roll media)	Maximum size: 432 mm x 18 m Minimum size: 203.2 mm x 203.2 mm Maximum outside diameter: 150 mm
Media size (Cut sheet)	- Manual feed from top Maximum size: 432 mm x 609.6 mm (W x L) Minimum size: 203.2 mm x 279 mm (W x L) - Manual feed from front Maximum size: 432 mm x 609.6 mm (W x L) Minimum size: 203.2 mm x 520 mm (W x L)
Printable area (Roll media)	Area excluding 3mm from the top, 3 mm from the bottom, and 3 mm from the left and right edges. Borderless printing: 0 mm from the top, bottom, and left and right edges. Width of media allowing borderless printing:10inches, JIS B4, A3+, 14inches, 16inches, 17inches, ISO A2/A3 Media type allowing borderless printing:Coated paper (heavy), photo glossy paper, photo semi-glossy paper, photo glossy paper (heavy), photo semi-glossy paper (heavy), photo glossy paper, photo semi-glossy paper, fine art (photo), fine art (photo heavy), fine art (painting), premium matte, fine art (watercolor), fine art (block print)
Printable area (Cut sheet)	Area excluding 3 mm from the top, 23 mm from the bottom (3 mm when supplied from the cassette), and 3 mm from the left and right edges.
Printing recommendation area (Roll media)	Printing assurance area (Roll sheet) Area excluding 20 mm from top, 20 mm from the bottom and 5 mm from the left and right edges (standard size).
Printing recommendation area (Cut sheet)	Printing assurance area (cut sheet) Area excluding 20 mm from the top, 23 mm from the bottom (20 mm when fed from the cassette), and 5 mm from the left and right edges (standard size).
Interface	USB2.0, Ethernet, IEEE1394 (option)
Printhead/Ink Tank type	Printhead and separate ink tanks
Printhead	[PF-01] Number nozzles: 2560 nozzles per color
Ink tank	[PFI-102]MBK,BK,GY,PGY,R,G,B,C,M,Y,PC,PM Capacity: 130 ml per color (Ink tanks supplied with the printer contain 90 ml of each color.)
Detection functions (Cover system)	Detects opening/closing of the top cover and ink cover.
Detection functions (Ink passage system)	Detects presence/absence of ink tank, ink level, presence/absence of the maintenance cartridge, waste ink full level, presence/absence of the printhead, and opening/closing of the supply valve.
Detection functions (Carriage system)	Detects the ambient temperature, head temperature, presence/absence of the head, and no ink ejection.
Detection functions (Paper path system)	Detects presence/absence of paper, remaining paper, cutter position, presence/absence of the cassette, leading/trailing edge of paper, paper width, and skew.

Operating noise	During printing: Approx. 53 dB (A) or less During standby: Approx. 35 dB (A) or less
Operating environment	Temperature: 15 oC to 30oC Humidity: 10% to 80% without dew condensation
Print quality guaranteed environment	Temperature: 15 oC to 30oC Humidity: 10% to 80%RH
Power supply	100-120 VAC (50/60 Hz), 220-240 VAC (50/60 Hz)
Power consumption (Maximum)	During printing: Max. 100 W
Power consumption	In power save (sleep) mode: 6 W or less(220-240 VAC: 7W or less) During standby: 1 W or less
Printer unit dimensions (WxDxH)	Without roll media unit (option): 999 x 733 x 317 mm With roll media unit (option): 999 x 810 x 344 mm
Weight	Without roll media unit (option): Approx. 45 kg With roll media unit (option): 49 kg

1.4.3 Interface Specifications

iPF5000 / iPF5100

a. USB (standard)

- (1) Interface type
USB 2.0 Hi-Speed (Full speed (12 Mbps/sec), High speed (480 Mbps/sec))
- (2) Data transfer system
Control transfer
Bulk transfer
- (3) Signal level
Compliant with the USB standard.
- (4) Interface cable
Twisted-pair shielded cable, 5.0 m max.
Compliant with the USB standard.
Wire materials: AWG No.28, data wire pair (AWF: American Wire Gauge)
AWG No.20 to No.28, power distribution wire pair
- (5) Interface connector
Printer side: Series B receptacle compliant with USB standard
Cable side: Series B plug compliant with USB standard

b. Network (standard)

- (1) Interface type
Interface compliant with IEEE802.3
- (2) Data transfer system
10Base-T/100Base-TX
- (3) Signal level
Input: Threshold
10Base-T: Max. +585 mV, Min. +300 mV
100Base-TX: Turn-on +1000 mV diff pk-pk, Turn-off +200 mV diff pk-pk
Output:
10Base-T: +2.2 V to +2.8 V
100Base-TX: +0.95 to +1.05 V
- (4) Interface cable
Category 5 (UTP or FTP) cable, 100 m or shorter
Compliant with ANSI/EIA/TIA-568A or ANSI/EIA/TIA-568B
- (5) Interface connector
Printer side: Compliant with IEEE802.3, ANSI X3.263, ISO/IEC60603-7

c. IEEE1394 (option)

- (1) Interface type
Interface compliant with IEEE1394-1995, P1394a (Version 2.0)
- (2) Data transfer system
Asynchronous transfer
- (3) Signal level
Input:
Differential input voltage:
During S100 settlement: +173 mV to +260 mV
During data reception: +142 mV to +260 mV
During S200 settlement: +171 mV to +262 mV
During data reception: +132 mV to +260 mV
During S400 settlement: +168 mV to +265 mV
During data reception: +118 mV to +260 mV
Output:
Differential output voltage: +172 mV to +265 mV
- (4) Interface cable
Twisted-pair shielded cable, 4.5 m max.
Compliant with IEEE1394-1995 standard or P1394a (Version 2.0) standard
- (5) Interface connector
Printer side: 6-pin connector (socket) compliant with IEEE1394 standard
Cable side: 6-pin connector (plug) compliant with IEEE1394 standard
Cable side: RJ-45 type compliant with ANSI/EIA/TIA-568A or ANSI/EIA/TIA-568B

1.5 Names and Functions of Components

1.5.1 Front

iPF5000

F-1-27

- [1] Top cover
Open this cover when installing the printhead or remove the media jammed inside the printer.
- [2] Ink tank cover
Open this cover when replacing ink tanks.
- [3] Cassette
Load cut sheets in this tray.
- [4] Operation panel
This panel includes the Power button, Online button, display, lamps, the other buttons.
- [5] Paper tray unit
This is a standard unit used to feed cut sheets manually.
It can be replaced with the optional auto roll feed unit.
- [6] Output tray
The ejected media are stacked in this tray.
- [7] Stand (option)
It is a stand that puts the printer.
- [8] Output stacker (included with stand or desktop basket)
It is a stacker made of the cloth that stacks the ejected media.

1.5.2 Front

iPF5100

F-1-28

- [1] Top cover
Open this cover when installing the printhead or remove the media jammed inside the printer.
- [2] Ink tank cover
Open this cover when replacing ink tanks.
- [3] Cutter
A round-blade cutter cuts roll media automatically. It is stowed inside when it is out of use.
- [4] Output tray
Printed documents are ejected into the output tray.
- [5] Output guides
These guides support printed documents as they are ejected, preventing jams. Raise the guides before printing on rolls.
- [6] Output tray extension
An extension to prevent ejected paper from falling to the floor. Pull out the extension to match the paper size before printing on sheets.
- [7] Basket
Receives printed matter as it is ejected. Only one sheet can be housed in the basket.
- [8] Stand
The base on which the printer is mounted. The stand equipped with casters is easy to move.
- [9] Paper eject slot (paper tray front loading port)
All printed matter is ejected from this port. In loading thick paper, insert it into this port.
- [10] Operation panel
Contains the power button, online button display and so on.
- [11] Roll feed unit
Load roll media on this unit.
- [12] Roll feed unit cover
Load roll media with this cover open.
- [13] Paper tray cover
Load cut sheet at the paper tray top loading port with this cover open. This cover is opened, and the cut sheet is set at top manual feed slot.
- [14] Cassette
Load sheets in this tray.
- [15] Guide lever
Squeeze these levers to slide the guides.
- [16] Length guide
Adjust this guide to hold paper lengthwise.
- [17] Maximum capacity line
A guide line indicating how many sheets can be loaded. Do not load paper over this line.
- [18] Width guide
Adjust this guide to hold paper widthwise.

1.5.3 Rear

iPF5000 / iPF5100

F-1-29

- [1] Expansion board slot
Insert the IEEE1394 (FireWire) expansion board (option) in this slot.
- [2] USB port
Connect the USB cable to this port.
- [3] Ethernet connector
Connect the Ethernet cable to this connector.
- [4] Power connector
Connect the power cord to this connector.
- [5] Carrying handle (5)
The printer is carried with this handles of a right and left bottom.

1.5.4 Top Cover (Inside)

iPF5100

F-1-30

- [1] Carriage shaft
The carriage travels in this area.
- [2] Carriage
Moves the printheads.
- [3] Borderless printing ink receiving channel
Receives inks overflowing the edges of the paper during borderless printing.
- [4] Platen
Paper and the printheads travel over the platen to execute printing. Suction holes on the surface prevent the paper from lifting.
- [5] Pinch roller
A vital part needed to feed paper.
- [6] Cleaner brush
Use this brush to wipe off chad over the plant when cleaning the inside of the top cover.

1.5.5 Manual Loading Area

iPF5100

F-1-31

- [1] Paper tray cover
In loading paper in a paper tray, open this cover.
- [2] Paper support
In loading paper in a paper tray, open the paper tray cover and then this tray.
- [3] Width guides
In loading cut sheet, move the guide to adjust to the paper size.
- [4] Paper tray front loading port (Paper eject slot)
In loading thick paper, insert it into this port. All printed matter is ejected from this port.
- [5] Paper tray top loading port
In loading cut sheet, insert them into this port.

1.5.6 Roll Feed Unit Cover (Inside)

iPF5100

F-1-32

- [1] Roller holder
Set roll media on this holder.
- [2] Holder stopper
Use to secure roll media to the roller holder.
- [3] Roller holder slot
Set the roller holder in this guide groove.

1.5.7 Carriage

iPF5000

F-1-33

- [1] Carriage
- [2] Printhead lock cover
This cover is used to lock the printhead. Open this cover when installing the printhead.
- [3] Printhead
The printhead incorporated nozzles. It is an important part for printing.
- [4] Printhead lock lever
This lever is used to lock the printhead. Open this lever when installing the printhead.
- [5] Ink tube guide
This stay is used as an ink tube guide.

1.5.8 Carriage

iPF5100

F-1-34

- [1] Printhead lock cover
This cover is used to lock the printhead. Open this cover when installing the printhead.
- [2] Printhead
The printhead incorporated nozzles. It is an important part for printing.
- [3] Printhead lock lever
This lever is used to lock the printhead. Open this lever when installing the printhead.
- [4] Wire guide
This stay is used as an ink tube guide.

1.5.9 Inside

iPF5000

F-1-35

- [1] Maintenance cartridge
Absorbs excess ink

1.5.10 Inside

iPF5100

F-1-36

[1] Maintenance cartridge
Absorbs excess ink

1.6 Basic Operation

1.6.1 Operation Panel

iPF5000

This section explains the functions of the buttons and the meanings of the LEDs on the operation panel.

[1] Display

This display shows the printer menus, statuses, and messages.

[2] Data lamp (green)

Flashing: When the printer is printing, this lamp indicates that the printer is receiving or processing a print job.
When the printer is not printing, this lamp indicates that the print job is paused or firmware data is being received.
Off: This indicates that there is no print job.

[3] Message lamp (orange)

On: This indicates that a warning message is displayed.
Flashing: This indicates that an error message is displayed.
Off: This indicates that the printer is normal or the power is turned off.

[4] Auto Feed lamp (green)

On: This indicates that the cassette or roll media is selected as the paper source.
Off: This indicates that the paper tray or thick paper feed slot is selected as the paper source.

[5] Paper Tray lamp (green)

On: This indicates that the paper tray or thick paper feed slot is selected as the paper source.
Off: This indicates that the cassette or roll media is selected as the paper source.

[6] Paper Source button

This button is used to select a paper source. Pressing this button toggles between the automatic pickup and manual feed.
The [Auto Feed] lamp or [Paper Tray] lamp goes on.

[7] Online button

This button switches between online and offline modes.
On: This indicates that the printer is in the online status.
Off: This indicates that the printer is in the offline mode.

[8] Menu button

This button displays the main menu of the printer.

[9] Information button

This button displays a submenu. Information about the ink and media each time you press this button.
Head cleaning is carried out when this button is held pressed for at least 3 seconds.

[10] ▲ ▼ ◀ ▶ buttons
(In the menu mode)

▲ button: Displays the next higher-level menu.

▼ button: Displays the next lower-level menu.

◀ button: Displays the previous item or setting.

▶ button: Displays the next item or setting.

(In the offline mode)

▲ button: Feeds the roll media in the reverse direction.

▼ button: Feeds the roll media in the normal direction.

- [11] OK button
This button sets or executes the selected operation or value.
- [12] Stop/Eject button
This button aborts the job in progress and ejects the media.
- [13] Power button
This button turns on/off the printer.
- [14] Color label
This label indicates the ink tank colors and names that correspond to the ink level indications shown on the display.

1.6.2 Operation Panel

iPF5100

This section explains the functions of the buttons and the meanings of the LEDs on the operation panel.

F-1-38

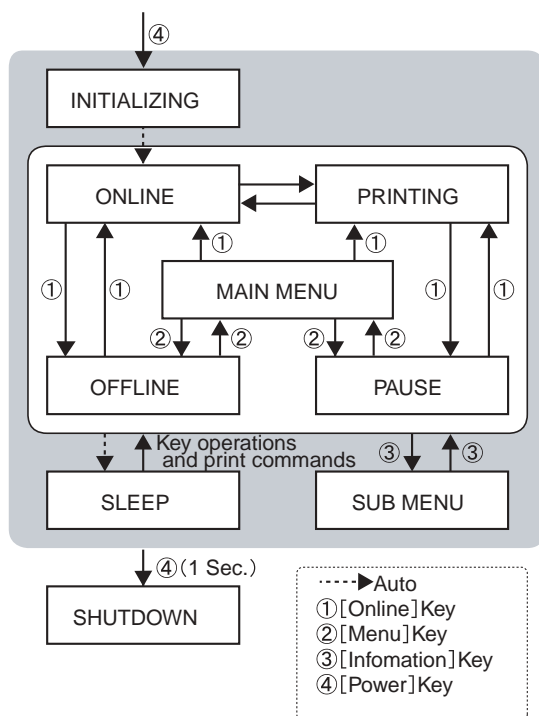

- [1] Data lamp (green)
Flashing: When the printer is printing, this lamp indicates that the printer is receiving or processing a print job.
When the printer is not printing, this lamp indicates that the print job is paused or firmware data is being received.
Off: This indicates that there is no print job.
- [2] Message lamp (orange)
On: This indicates that a warning message is displayed.
Flashing: This indicates that an error message is displayed.
Off: This indicates that the printer is normal or the power is turned off.
- [3] Paper Tray lamp (green)
On: This indicates that the paper tray or thick paper feed slot is selected as the paper source.
Off: This indicates that the cassette or roll media is selected as the paper source.
- [4] Auto Feed lamp (green)
On: This indicates that the cassette or roll media is selected as the paper source.
Off: This indicates that the paper tray or thick paper feed slot is selected as the paper source.
- [5] Online button
This button switches between online and offline modes.
On: This indicates that the printer is in the online status.
Off: This indicates that the printer is in the offline mode.
- [6] Paper Source button
This button is used to select a paper source. Pressing this button toggles between the automatic pickup and manual feed.
The [Auto Feed] lamp or [Paper Tray] lamp goes on.
- [7] Menu button
This button displays the main menu of the printer.
- [8] Information button
This button displays a submenu. Information about the ink and media each time you press this button.
Head cleaning is carried out when this button is held pressed for at least 3 seconds.
- [9] ▲ ▼ ◀ ▶ buttons
(In the menu mode)
▲ button: Displays the next higher-level menu.
▼ button: Displays the next lower-level menu.
◀ button: Displays the previous item or setting.
▶ button: Displays the next item or setting.
(In the offline mode)
▲ button: Feeds the roll media in the reverse direction.
▼ button: Feeds the roll media in the normal direction.
- [10] OK button
This button sets or executes the selected operation or value.
- [11] Stop/Eject button
This button aborts the job in progress and ejects the media.
- [12] Power button
This button turns on/off the printer.
- [13] Color label

- This label indicates the ink tank colors and names that correspond to the ink level indications shown on the display.
- [14] Display
This display shows the printer menus, statues, and messages.

1.6.3 Printer Stats Transition

iPF5000

The following chart shows various printer states and how they are transited by button operations.

F-1-39

1.6.4 Main Menu

iPF5000

The printer has a Main menu which includes a menu related to maintenance such as adjustment of ink ejection position of each nozzle and head cleaning, a menu related to printing settings such as auto cutting and ink drying time, and a menu related to parameters such as a message language.

a. Main menu operations

(1) How to enter the Main menu

To enter the Main menu, press the [Menu] button on the operation panel.

(2) How to exit the Main menu

To exit the Main menu, press the [Online] button.

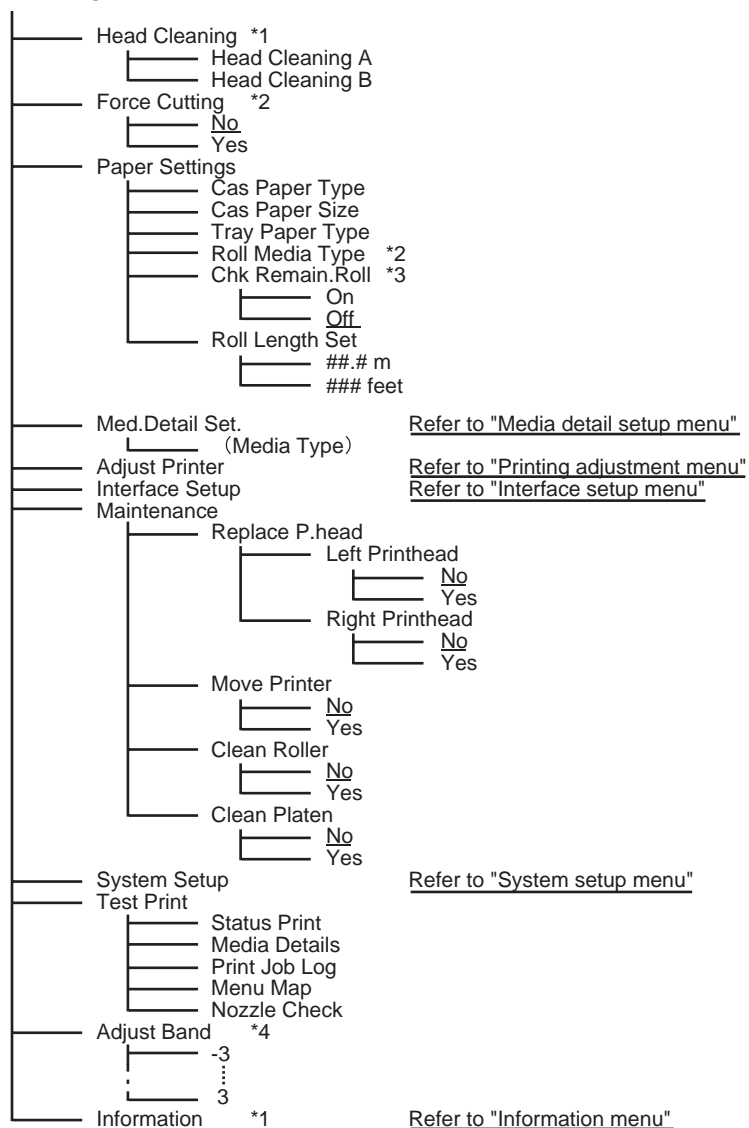

(3) Buttons used with the Main menu

- Selecting menus and parameters: [◀] or [▶] button
- Going to the next lower-level menu: [▼] button
- Going to the next higher-level menu: [▲] button
- Determining a selected menu or parameter: [OK] button

2. Main Menu

Hierarchical levels and parameters of the Main menu are shown below.

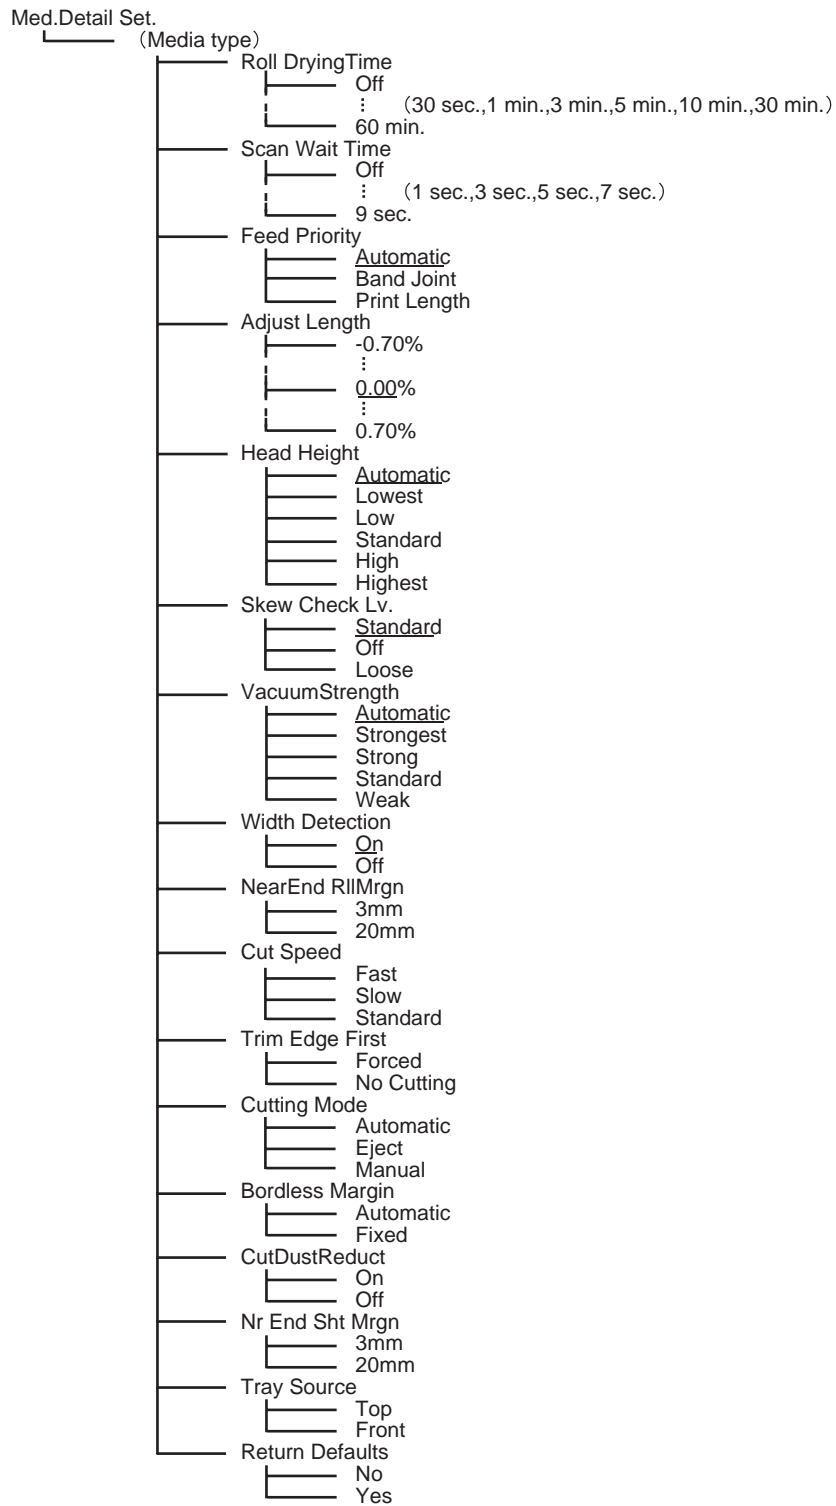

MAIN MENU

- *1 Displayed even when printing
 *2 Displayed only when roll media is loaded
 *3 Displayed only when Auto Roll Feed Unit is attached
 *4 Displayed only during printing

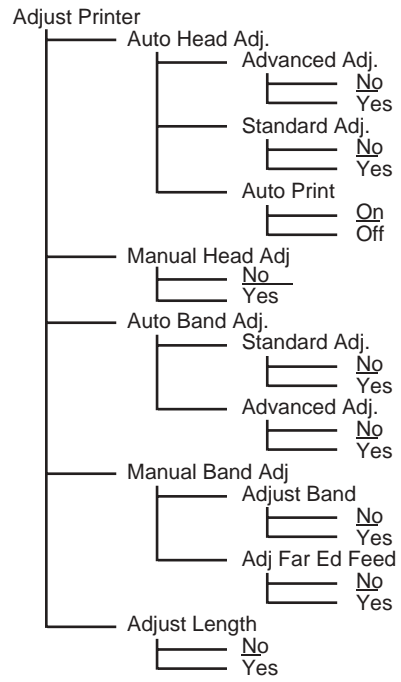

F-1-40

Media detail setup menu

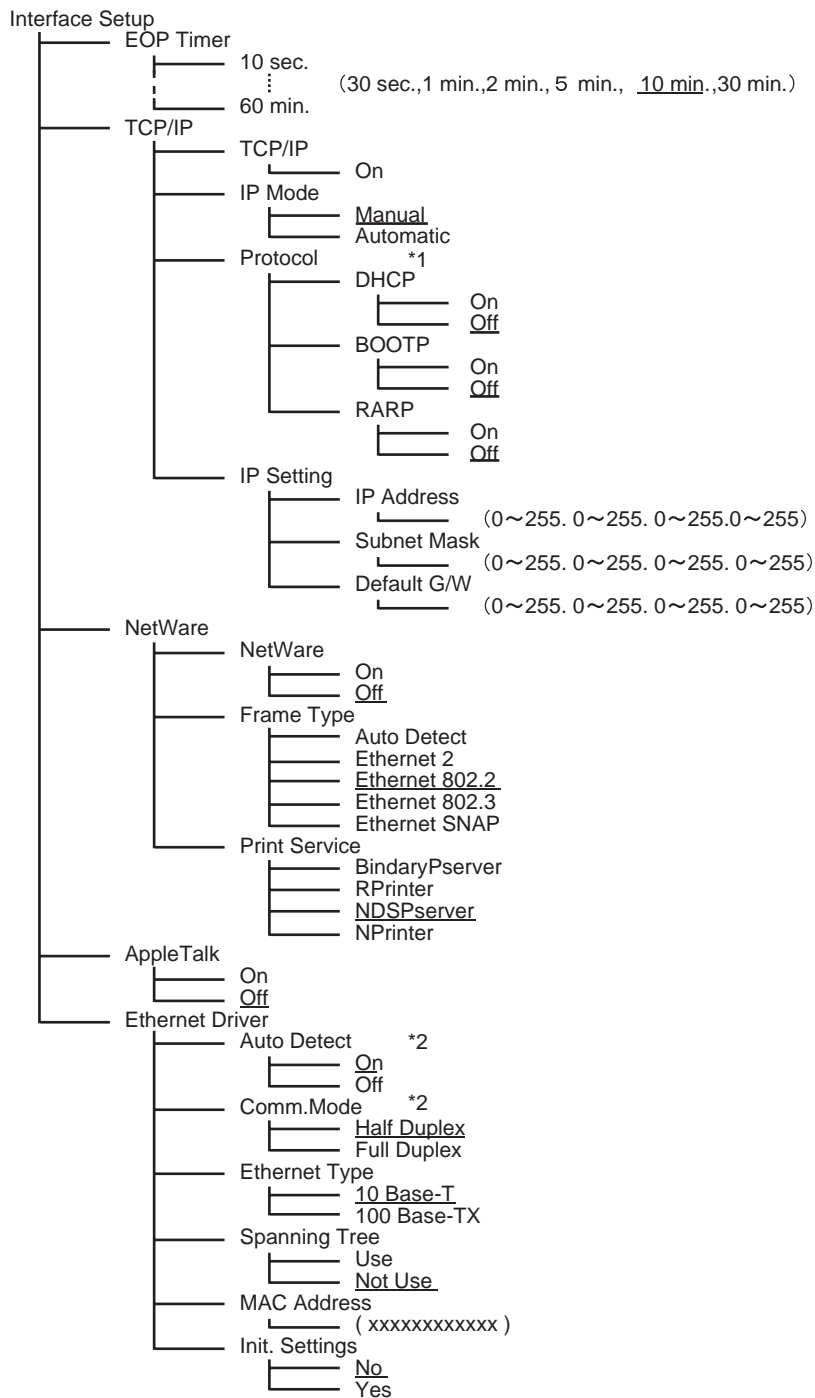

F-1-41

Printing adjustment menu

F-1-42

Interface setup menu

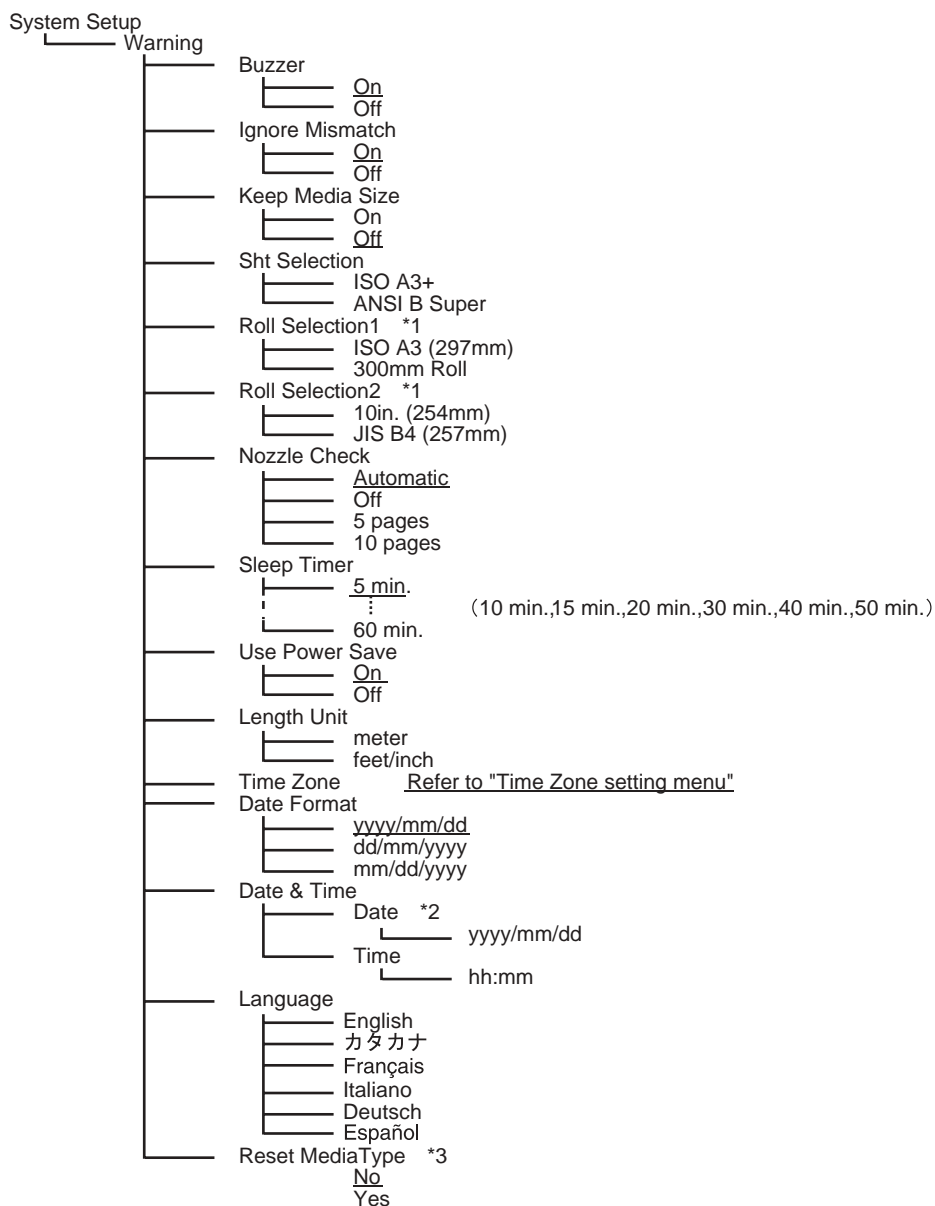

*1 Displayed when "Automatic" is selected for "IP mode"

*2 Displayed when "Off" is selected for "Auto Detect"

F-1-43

System setup menu

*1 Displayed only when Auto Roll Feed Unit is attached

*2 Display method depends on "Date Format"

*3 Returns settings of "Med. Detail Set" to the state of factory shipment

1.6.5 Main Menu

iPF5100

The printer has a Main menu which includes a menu related to maintenance such as adjustment of ink ejection position of each nozzle and head cleaning, a menu related to printing settings such as auto cutting and ink drying time, and a menu related to parameters such as a message language.

1. Main menu operations

a) How to enter the Main menu

To enter the Main menu, press the [Menu] button on the operation panel.

b) How to exit the Main menu

To exit the Main menu, press the [Online] button.

c) Buttons used with the Main menu

- Selecting menus and parameters: [◀] or [▶] button
- Going to the next lower-level menu: [▼] button
- Going to the next higher-level menu: [▲] button
- Determining a selected menu or parameter: [OK] button

2. Mein Menu

The structure of the main menu is as follows.

				[Ink Consumed]	[xx.x ml]

4. Main Menu Settings

Main menu items are described in the following tables.

T-1-16

Setting Item	Description, Instructions
[Paper Cut]	Displayed if a roll is loaded. Choose Yes to cut the roll at the current position. The paper will be fed, if necessary, so that the sheet is at least 10 cm long after the cut. The paper will not be cut if there is not enough paper left to feed the paper this much.
[Head Cleaning]	Printhead cleaning options. Choose Head Cleaning A if printing is faint, oddly colored, or contains foreign substances. Choose Head Cleaning B if no ink is printed at all, or if printing is not improved by Head Cleaning A .
[Media Menu]	Specify the type and size of paper.
[Paper Details]	Specify detailed paper-related settings, including the ink drying time and borderless printing options.
[Adjust Printer]	Adjust the Printhead alignment or amount of feed by printing a test pattern.
[Interface Setup]	Configure the network settings.
[Maintenance]	Replace the Printhead , prepare to transfer the printer, and clean the Pick Up Roller .
[System Setup]	Specify the printer system settings, including the date format and display language.
[Test Print]	Choose Status Print to print information about the printer. Choose Media Details to print the paper settings as specified in Med.Detail Set. . Choose Print Job Log to print a record of print jobs, including the paper type and size, amount of ink used, and so on. Choose Menu Map to print a list of the main menu options. Choose Nozzle Check to print a test pattern for checking the nozzles. If you have selected a leading edge margin of 20 mm in Nr End Sht Mrgn in the printer menu, the test print sheet may not be printed completely.
[Information]	Displays the information about the printer and history of print jobs.

[Paper Settings]

T-1-17

Setting Item	Description, Instructions
[Cas Paper Type]	Choose the type of paper in the Cassette .
[Cas Paper Size]	Specify the size of paper in the Cassette .
[Manual PaperType]	Choose the type of paper in the tray.
[Manual Paper Size]	Choose the type of paper in the tray.
[Roll Media Type]	Choose the type of roll.
[Chk Remain.Roll]	Choose On to print a barcode at the end of a roll before you remove it. The printed barcode can be used in managing the amount of roll paper left. Choose Off if you prefer not to print the barcode.
[Roll Length Set]	Displayed if Chk Remain.Roll is On . If a barcode is not printed on rolls, specify the roll length. The roll length is displayed in meters (1.0 - 91.0 m) or feet (1 - 300 ft.), depending on the setting in Length Unit .

[Paper Details]

T-1-18

Setting Item	Description, Instructions	
(The paper type is displayed here.) (*1)	[Roll DryingTime]	Specify the time to wait for the ink to dry for each sheet.
	[Scan Wait Time]	Specify the time to wait for the ink to dry between each scan in bidirectional printing, in consideration of how quickly the paper absorbs ink. Note that printing will take longer if you specify a wait time.
	[Feed Priority]	Specify exact paper feeding, if desired. Normally, click Automatic . Choose Print Length if you prefer to feed the paper an exact amount. However, note that choosing Print Length may result in slight banding in the direction of Carriage scanning.
	[Adjust Length]	Displayed if Feed Priority is Print Length . Adjustment relative to the amount of stretching or shrinkage of the current paper. For paper that tends to stretch, increase the feed amount by setting the adjustment value toward +. For paper that tends to shrink, decrease the feed amount by setting the adjustment value toward -. The setting for the amount of paper stretching or shrinkage is relative. If you access it again later, it will be displayed as 0.00 %.
	[Head Height]	Adjust the Printhead height.
	[Skew Check Lv.]	If you print on Japanese Paper Washi or other handmade paper that has an irregular width, choose Loose for a higher skew detection threshold, or choose Off to disable skew detection. However, if paper is loaded askew when detection is Off , note that paper jams or Platen soiling may occur. If strict skew detection is required, choose High Accuracy.
	[VacuumStrngth]	Specify the level of suction that holds paper against the Platen .
	[NearEnd RllMrgn]	Specify a margin at the leading edge of roll paper to ensure better printing quality at the leading edge. Note that if you choose 3 mm , it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the the leading edge.
	[Cut Speed]	Choose the cutting speed. For media such as film that are more likely to generate debris when cut, choose Fast to reduce the amount of debris.
	[Trim Edge First]	If a roll is loaded, the end of the paper will be cut. Choose Forced to have 40 mm (1.6 in) cut off the leading edge of the roll, ensuring a straight edge, after you load the roll. Scraps are then removed. When Automatic is selected, if the left and right side of the leading edge of the roll are uneven (by 3 mm [0.12 in] or more), the edge is cut an amount relative to the slant to ensure a straight edge after you load the roll. Scraps are then removed. If the unevenness is less than 3 mm or if No Cutting is selected, the edge is not cut and scraps are not removed.
	[Cutting Mode]	Specify if the Cutter Unit is used for cutting. Choose Automatic to have roll paper cut automatically after printing. If you choose Eject , the paper will not be cut after printing. Instead, a line will be printed at the cut position.
	[Bordless Margin]	Adjust the margin during borderless printing.
	[CutDustReduct.]	Choose On to reduce the amount of debris generated when cutting film and similar media by printing a line at the cut position. This option reduces the amount of debris given off after cutting.
	[NearEnd ShtMrgn]	Specify a margin at the leading edge of sheets to ensure better printing quality at the leading edge. Note that if you choose 3 mm , it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the the leading edge. If you have selected 20 mm , the test print sheet may not be printed completely.
	[Manual Feed]	Choose how the paper is supplied, Top for printing from the Tray or Front for printing from the Front Paper Feed Slot .
	[Return Defaults]	Choose Yes to restore Med.Detail Set. to the factory default values.

[Adjust Printer]

T-1-19

Setting Item		Description, Instructions
[Auto Head Adj.]	[Standard Adj.]	Choose Yes to have the printer print and read a test pattern for the automatic adjustment of Printhead alignment relative to the printing direction.
	[Advanced Adj.]	Choose Yes to have the printer print and read a test pattern for the automatic adjustment of Printhead alignment relative to the nozzle, ink tank, and printing direction. Six sheets are required when printing on sheets.
	[Auto Print]	Choose On to have the printer automatically execute the Advanced Adj. operations after you replace the Printhead .
[Manual Head Adj]		Choose Yes to print a test pattern for adjustment of Printhead alignment relative to the printing direction. Enter the adjustment value manually based on the resulting pattern.
[Auto Band Adj.]	[Standard Adj.]	Choose Yes to have the printer print and read a test pattern for band adjustment, based on which the printer automatically adjusts the feed amount.
	[Advanced Adj.]	Choose this option when using paper other than genuine Canon paper, or paper for purposes other than checking output. Choose Yes to have the printer print and read a test pattern for band adjustment, based on which the printer automatically adjusts the feed amount. Note that this function takes more time and requires more ink than Standard Adj. Two sheets are required when printing on sheets.
[Manual Band Adj]		Choose Yes to print a test pattern for adjusting the feed amount based on the paper type. Two sheets are required when printing on sheets.
[Adj Far Ed Feed]		Choose Yes to print a test pattern for adjusting the feed amount of the trailing edge of paper based on the paper type.
[Adjust Length]		Choose Yes to print a test pattern for adjustment relative to paper stretching or shrinkage, after which you can enter the amount of adjustment.
[Calibration]	[Auto Adjust]	Select [Yes] to print a color calibration adjustment pattern and adjust the correction value automatically. This color calibration adjustment value is extended to all print tasks.
	[Execution Log]	The date of color calibration and the paper type are displayed for visual verification.
	[Use Adj. Value]	Select [Disable] and press the [OK] button not to apply the color calibration correction value to printing. The printer driver setting governs. Select [Enable] and press the [OK] button to apply the color calibration correction value to printing. It is overridden by the printer driver setting, though.
	[Return Defaults]	The color calibration correction value and the execution history are cleared.

[Interface Setup]

T-1-20

Setting Item			A confirmation message is displayed if you press the [icon] button. Choose OK to restore the network settings to the default values.
[EOP Timer]			Specify the timeout period for print jobs.
[TCP/IP]	[TCP/IP]		Specify the TCP/IP protocol settings. To apply your changes, choose Store Setting .
	[IP Mode]		Choose whether the printer IP address is configured automatically or a static IP address is entered manually.
	[Protocol]	[DHCP]	Specify the protocol used to configure the IP address automatically.
		[BOOTP]	
		[RARP]	
	[IP Setting]	[IP Address]	Specify the printer network information when using a static IP address.
		[Subnet Mask]	Enter the IP address assigned to the printer, as well as the network subnet mask and default gateway.
		[Default G/W]	
[NetWare]	[NetWare]		Specify the NetWare protocol. To apply your changes, choose Store Setting .
	[Frame Type]		Specify the frame type to use.
	[Print Service]		Choose the print service.
[AppleTalk]			Specify whether to use the AppleTalk protocol. To apply your changes, choose Store Setting .
[Ethernet Driver]	[Auto Detect]		Specify the communication method. To apply your changes, choose Store Setting . Choose On for automatic configuration of the LAN communication protocol. Choose Off to use settings values of Comm.Mode and Ethernet Type .
	[Comm.Mode]		Choose the LAN communication method.
	[Ethernet Type]		Choose the LAN transfer rate.
	[Spanning Tree]		Choose whether spanning-tree packets are supported over the LAN.
	[MAC Address]		Displays the MAC address.
[Return Defaults]			A confirmation message is displayed if you press the ▼ button. Choose OK to restore the network settings to the default values.

[Maintenance]

T-1-21

Setting Item		Description, Instructions
[Replace P.head]	[Printhead L]	Not displayed during a warning message that the remaining Maintenance Cartridge capacity is low. When replacing the left Printhead , choose Yes and follow the instructions on the screen.
	[Printhead R]	Not displayed during a warning message that the remaining Maintenance Cartridge capacity is low. When replacing the right Printhead , choose Yes and follow the instructions on the screen.
[Move Printer]		Not displayed during a warning message that the remaining Maintenance Cartridge capacity is low. When transferring the printer to another location, choose Yes and follow the instructions on the screen.
[Clean Roller]		Choose Yes to clean the Pick Up Roller .
[Clean Platen]		Use this function to clean inside the Top Cover . After you select Yes , the Carriage is moved in preparation for Platen cleaning.

[System Setup]

T-1-22

Setting Item		Description, Instructions
[Warning]	[Buzzer]	Set the buzzer. Choose On for the buzzer to sound in case of errors.
	[Detect Mismatch]	Choose Warning for notification (display of a warning message) during printing if the paper type specified in the printer menu does not match the paper type in the printer driver. Choose None to continue print without notification. Choose Pause to have printing paused under these circumstances. In this case, you can continue printing by pressing the Online button.
[Keep Media Size]		Choose On to use the paper size setting as the basis for printing instead of other settings. The margin setting of the printer menu will be used instead of the margin setting of the printer driver if the latter is smaller, which may prevent text or images in the margin from being printed. Choose Off to use the printer driver settings instead. Even if the margin setting of the printer driver is smaller than that of the printer driver, text or images will not be cut off. However, this requires longer paper because the actual margin will be equal to the margin setting of the printer driver plus the margin setting of the print menu.
[PaperSize Basis]	[Sht Selection]	If sheet size detection is activated, choose whether ISO A3+ or ANSI B Super is applied when an inbetween size is detected.
	[Roll Selection1]	If roll size detection is activated, choose whether ISO A3 (297 mm) and 300 mm Roll is applied when an inbetween size is detected.
	[Roll Selection2]	If roll size detection is activated, choose whether 10 in. (254 mm) or JIS B4 (257 mm) is applied when an inbetween size is detected.
[TrimEdge Reload]		Keeping a roll in the printer for a long time without printing on it may leave a depression on the leading edge. When printing quality is most important, we recommend setting this option to On so that the paper edge is automatically cut before printing.
[Nozzle Check]		Specify the timing for automatic checks of nozzle clogging. Choose Off to disable checking. Choose 5 pages to check after every 5 pages are printed. Choose 10 pages to check once after every ten pages are printed.
[Sleep Timer]		Specify the period before the printer enters sleep mode.
[Length Unit]		Choose the unit of measurement when roll length is displayed. You can switch the unit displayed for Roll Length Set and the remaining paper amount displayed in the submenu.
[Time Zone]		Specify the time zone. Time zone options indicate a main city in this time zone and the difference from Greenwich Mean Time.
[Date Format]		Specify the date format.
[Date & Time]	[Date]	Set the current date.
	[Time]	Set the current time.
[Language]		Specify the language used on the Display Screen .
[Reset PapSetngs]		Restores settings that you have changed with Media Configuration Tool to the factory default values.

5. Main Menu Settings (During Printing)

Main menu items during printing are described in the following tables.

T-1-23

Setting Item	Description, Instructions
[Head Cleaning]	Printhead cleaning options. Choose Head Cleaning A if printing is faint, oddly colored, or contains foreign substances. Choose Head Cleaning B if no ink is printed at all, or if printing is not improved by Head Cleaning A.
[Fine Band Adj.]	Displayed during print jobs. Fine-tune the feed amount manually.
[Information]	Displays the information about the printer and history of print jobs.

[Information]

T-1-24

Setting Item			Description, Instructions
[Version]			Displays the version of the printer and firmware.
[RAM]			Displays the printer memory capacity.
[Ext. Interface]			Identifies boards in the expansion slot.
[MAC Address]	[000085#####]		Displays the MAC address.
[Error Log]			Displays the most recent error messages (up to two).
[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name]	Displays the document name in the last print job.
		[User Name]	Displays the name of the user who sent the print job.
		[Page Count]	Displays the number of pages in the print job.
		[Job Status]	Displays the results of the print job processed.
		[Print Start Time]	Displays the time when the print job was started.
		[Print End Time]	Displays the time when the print job was finished.
		[Print Time]	Displays the time required to print the job.
		[Print Size]	Displays the paper size in the print job.
		[Media Type]	Displays the paper type in the print job.
		[Interface]	Displays the interface used for the print job.
		[Ink Consumed]	Displays the ink density of each color in the print job.
[Counter]	[Cut Count]		Displays the total number of cuts made by the Cutter Unit .

6. Color calibration print chart

The following chart (sample) is printed when executing "Calibration".

F-1-47

1.7 Safety and Precautions

1.7.1 Safety Precautions

1.7.1.1 Moving Parts

iPF5000 / iPF5100

Moving parts of the printer include the carriage unit driven by the carriage motor, the carriage belt, the ink tube, the flexible cable, the feed roller drives the feed motor, the pinch roller, and the purge unit driven by the purge motor.

To prevent accidents, if the top cover is opened in the online/offline mode, the carriage motor, feed motor, and other driving power supplies are turned off.

F-1-48

1.7.1.2 Adhesion of Ink

iPF5000 / iPF5100

(1) Ink passages

Be careful not to touch the ink passages of the printer to prevent the printer, workbench, and clothes from being stained with ink.

The ink flows through the ink tank unit, carriage unit, purge unit, maintenance jet tray, maintenance cartridge, and the ink tubes that relay ink to individual units.

F-1-49

- Although the ink is not harmful to the human body, it contains organic solvents. Ink may contaminate the surrounding parts. Carry out the work with due caution. If your hands are stained with ink, wash them with a plenty of water. Be careful not to allow the ink to get into your mouth or eyes.
- If the ink gets into your eyes, flush them with water well and see a doctor.
- In case of accidental ingestion of a large quantity of ink, see a doctor immediately.
- It is also effective to use gloves to prevent ink from adhering when working.
- Since this ink contains pigment, stains will not come out of clothing.

(2) Ink Mist

Since the printhead prints by squirting ink onto the media, a minute amount of ink mist is generated in the printing unit during printing. The generated ink mist is collected in the printer by the airflow. However, uncollected ink mist may stain the platen, carriage unit, exterior, and purge unit. These stains may soil the print media or hands and clothes when servicing the printer. Wipe them off carefully with a soft, well-wrung cloth.

F-1-50

1.7.1.3 Electric Parts

iPF5000

The electric parts of the printer are activated when the printer is connected to the AC power supply.

At the left rear of the printer are the main controller, power supply, and interface connector. The carriage PCB is incorporated in the carriage unit, and the operation panel is on the upper right top cover.

When servicing the printer with the cover removed, be extremely careful to avoid electric shock and shorting electrical devices.

F-1-51

1.7.1.4 Electric Parts

iPF5100

The electric parts of the printer are activated when the printer is connected to the AC power supply. At the left rear of the printer are the main controller, power supply, and interface connector. The carriage PCB is incorporated in the carriage unit, and the operation panel is on the upper right top cover. When serving the printer with the cover removed, be extremely careful to avoid electric shock and shorting electrical devices.

F-1-52

1.7.2 Other Precautions

1.7.2.1 Printhead

iPF5000 / iPF5100

1. How to Handle the Printhead

Do not open the printhead package until you are ready to install the head.

When installing the printhead in the printer, hold the knob[1] and then remove the protective cap 1[2] and protective cap 2[3] in that order.

Do not reattach the protective cap 2[3] to the printhead because the cap may damage the nozzles[4].

To prevent the nozzles from getting clogged with foreign matter or dried ink, install the printhead immediately after you remove the protective caps.

Also make sure to press down the locking lever of the printhead until you feel a click.

In addition, to prevent clogging of the nozzles with foreign matter and improper supply of ink, never touch the nozzles[4] or ink port[6], or wipe it with tissue paper or anything else.

Do not touch Electrical contact[5].

Also, never attempt to disassemble/reassemble the printhead or wash it with water.

MEMO:

If the nozzles are clogged or an ink suction problem occurs, white lines can appear on the printout at a constant frequency or color dulling can occur. If this problem is not resolved by cleaning operations, replace the printhead with a new one.

F-1-53

T-1-25

- | | |
|----------------------|------------------------|
| [1] knob | [4] nozzles |
| [2] protective cap 1 | [5] Electrical contact |
| [3] protective cap 2 | [6] ink port |

2. Capping

The printer will perform the capping operation when printing has ended or during standby due to an error, in order to protect the printhead and avoid ink leakage. If the power cord is accidentally unplugged, turn off the Power button, reconnect the power cord, and then turn on the Power button. Confirm that the printer starts up properly and enters to the "Online" or "Offline" status, and then power off the printer using the Power button.

Improper "capping operation" may cause clogged nozzles due to dried ink or ink leakage from the printhead.

3. When the printer is not used for a long time

Keep the printhead installed in the printer even when it is not used for an extended period of time.

If the printhead is left uninstalled, a printing failure may arise from closed nozzles due to depositing of foreign matter or dried ink when it is reinstalled. Even if the head remains installed, the nozzle may dry out and cause a printing failure if the ink is drained for transport.

4. Conductivity of Ink

The ink used in this printer is electrically conductive. If ink leaks into the mechanical unit, wipe clean with a soft, well-wrung damp cloth. If ink leaks onto electrical units, wipe them completely using tissue paper. If you cannot remove ink completely, replace the electrical units with new ones.

If electrical units are powered with ink leaked onto them, the units may damage. Never connect the power cord when ink has leaked onto the electrical units.

1.7.2.2 Ink Tank

iPF5000 / iPF5100

1. Unpacking the Ink Tank

Do not unpack the ink tank until you are ready to install it.

When installing the ink tank, be sure to shake it slowly 7 to 8 times before unpacking it. Otherwise, the ink ingredients may precipitate and degrade the print quality.

To prevent foreign matter from entering the ink port, installed the unpacked ink tank in the printer immediately.

2. Handling the Ink Tank

To prevent foreign matter from entering the ink flow path and causing ink suction and printing problems, never touch the ink port and contacts of the ink tank.

When you press down the ink tank lock lever, the needle enters the ink port, allowing ink to flow between the printer and ink tank.

Do not raise or lower the ink tank lock lever except when replacing the ink tank.

- [1] Ink tank
- [2] Ink tank lock lever
- [3] Ink port
- [4] Contacts

1.7.2.3 Handling the Printer

iPF5000 / iPF5100

1. Precautions against Static Electricity

Certain clothing may generate static electricity, causing an electrical charge to build up on your body. Such a charge can damage electrical devices or change their electrical characteristics.

In particular, never touch the printhead contacts.

F-1-55

- [1] Carriage unit
- [2] Printhead contacts

2. Fixing the Carriage

After completion of printing, the carriage is mechanically locked by the lock arm in the purge unit at the same moment the printhead is capped. Before transporting the printer, secure the carriage at its home position using belt stoppers[1] so that the carriage does not become separated from the lock arm and damage or ink does not leak.

F-1-56

3. Vent holes

This printer has four vent holes, [1] to [4]. Do not block the vent holes when the printer is in service

F-1-57

4. Contact of Linear Scale/Carriage Shaft

Please do not touch a linear scale and the carriage shaft when the inside of the top cover is opened, and execute maintenance. When touching a linear scale and the carriage shaft, it might cause defective movement of the carriage and a defective print.

F-1-58

- [1] Linear Scale
- [2] Carriage Shaft

5. Handling the Maintenance Cartridge

When removing the maintenance cartridge from the printer, use caution so that waste ink does not spatter.

6. Refilling the Printer with Ink

After removing the ink from inside the printer using the automatic or manual ink draining procedure to disassemble/reassemble or transport the printer, refill the printer with ink as soon as possible upon completion of the work.

If the ink remaining in the printer dries up, mechanical parts may be seized and malfunction may result.

1.7.3 Precautions When Servicing Printer

1.7.3.1 Notes on the Data Stored in the Printer

iPF5000 / iPF5100

This printer counts the print length, number of ink tank replacements, number of cleaning operations, number of cutter operations, and so on and stores them in the main controller's EEPROM as a service mode counter.

This counter provides important information about the printer usage status.

You can check this information by printing it in the service mode or displaying it on the display.

Following the precautions below when servicing the printer.

(1) Repairing/replacing the PCB

When replacing the main controller, follow the specified replacement procedure.

For the main controller replacement procedure, see "Disassembly/Reassembly" > "Points to Note on Disassembly and Reassembly" > "Boards".

(2) After replacing the purge unit

The information about the number of cleanings arises in the purge unit. After replacing the purge unit, select [INITIALIZE] > [PURGE] in the service mode to initialize (clear) the information about the number of cleanings.

(3) On replacement of supplies

After supplies have been replaced, execute [INITIALIZE] > [PARTS COUNTER] > [PARTS xx] in service mode to initialize (clear) the parts counter information.

For the consumable parts, see "Maintenance" > "Consumable Parts".

You cannot check the counter information once it is initialized (cleared). Be careful not to initialize the counter information before checking it.
You cannot modify the counter information from the operation panel.

1.7.3.2 Confirming the Firmware Version

iPF5000 / iPF5100

Firmware has been downloaded to the main controller.

When you have replaced the main controller, check that the firmware is the latest version. If not, update it to the latest version.

Reference:

For how to update the main controller, refer to "TROUBLESHOOTING" > "Update".

1.7.3.3 Precautions against Static Electricity

iPF5000 / iPF5100

Certain clothing may generate static electricity, causing an electrical charge to build up on your body. Such a charge can damage electrical devices or change their electrical characteristics.

Before disassembling the printer for servicing, discharge any static buildup by touching a grounded metal fitting or the like.

1.7.3.4 Precautions for Disassembly/Reassembly

iPF5000 / iPF5100

The precautions for disassembly/reassembly are described in "Disassembly/Reassembly".

1.7.3.5 Self-diagnostic Feature

iPF5000 / iPF5100

The printer has a self-diagnostic feature to analyze hardware problems.

The self-diagnosis result is shown on the display and indicated by lamps.

For detailed information, see "Error Codes".

1.7.3.6 Disposing of the Lithium Battery

iPF5000 / iPF5100

The main controller PCB of this printer is equipped with a lithium battery to back up various data.

Risk of explosion if battery is replaced by an incorrect type.
Dispose of used batteries according to the instructions.

"For CA, USA Only

Included battery contains Perchlorate Material-special handling may apply. See

<http://www.dtsc.ca.gov/hazardouswaste/perchlorate/> for detail."

Achtung:

Die Lithiumbatterie darf nur durch das Originalersatzteil (Parts Katalog) ersetzt werden;
ansonsten besteht Brand-/Explosionsgefahr.

Lithiumbatterien niemals aufladen, demontieren oder durch Verbrennen entsorgen;

bei der Entsorgung die örtlichen Entsorgungsvorschriften beachten (Schadstoffe; Sondermüll).

2.1 Basic Operation Outline

2.1.1 Printer Diagram

iPF5000

Shown below is a printer diagram.

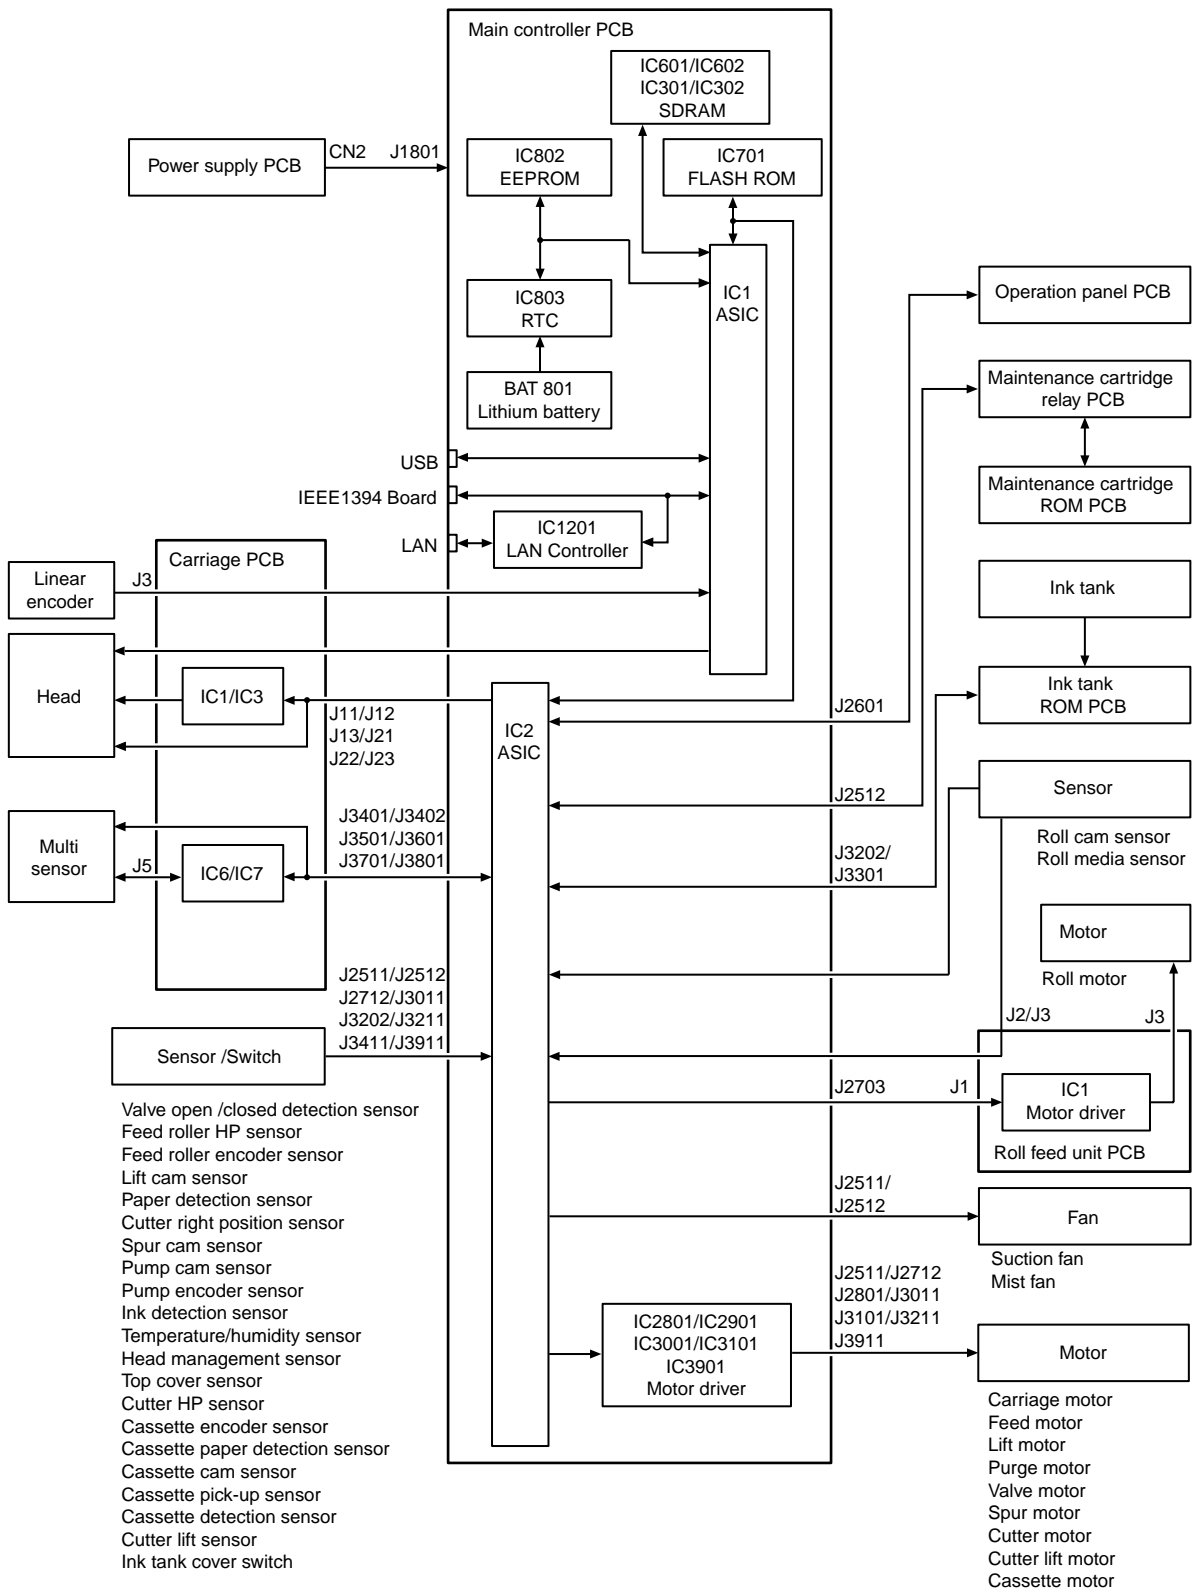

F-2-1

2.1.2 Printer Diagram

iPF5100

Shown below is a printer diagram.

F-2-2

2.1.3 Print Signal Sequence

iPF5000 / iPF5100

The signal sequence from when the printer receives the print signals until printing starts is shown in Figure.

F-2-3

a) The printer driver on the host computer transmits print data, including command data, to the printer after compressing the image data, without resolution, color and 12-color binarization conversion.

To achieve high-quality image output, the image processing table data used for image data color conversion and binarization conversion are generated as command data to meet the Media Type and other specifications of the printer driver.

b) This printer receives print data from the individual interfaces on the main controller, transmitting the received print data to ASIC (IC1).

c) The main controller decompresses the print data transmitted to the ASIC and gets it through resolution, color and 12-color binarization conversion while loading the data into DDR-SDRAM from time to time.

It also converts the print data to 12-color binary equivalents of image and command data.

d) The ASIC (IC1) generates image data synthesized with mask data within the ASIC in sync with the discharge time while loading the data into DDR-SDRAM from time to time.

e) The ASIC (IC2) collects printhead information from EEPROM mounted on the printheads and the printer temperature from the latch IC on the carriage board and transmit them to the ASIC (IC1).

The ASIC (IC1) also receives mask pattern data from the firmware installed in flash ROM.

f) The ASIC (IC1) converts the image data synthesized with the mask pattern to data associated with the printhead information and the printer temperature, transmitting the data to the printheads as a print signal. It transmits heat pulses to the printheads at the same time to optimize head driving.

g) The printheads convert the received print signal from a serial signal to a parallel signal for each row of nozzles and ANDs it with the heat pulses for perform printing.

h) The ASIC (IC1) controls the general aspects of image processing and print drive control by detecting the status of the individual printer components with reference to the adjustment values stored in EEPROM. SDR-SDRAM is used as work memory.

i) The ASIC (IC2) controls the general aspects of drive control by controlling button actuations and message displays on the basis of the firmware installed in flash ROM.

2.1.4 Print Driving

iPF5000 / iPF5100

Print and control signals are transferred via the carriage board to the printheads to discharge inks from the nozzle assembly at printing. Each printhead has 12 trains of nozzles arranged in a zigzag pattern. This printer uses two printheads arranged side by side. (In installed state, from left to right, Y, PC, C, PGY, GY, MBK, PM, M, BK, R, G, B)
Print signals directed at each nozzle train are even-numbered nozzle data (Hx-x-DATA-x-EV) and odd-numbered nozzle data (Hx-x-DATA-x-OD). These are transferred in timing with a data transfer clock (Hx-CLK) and data latch pulses (Hx-LT).
The Heat Enable (Hx-x-HE-x) drive control signal enables inks to be discharged from the nozzles.

1. Pint drive control

Each train of nozzles in a printhead has 2,560 nozzles.
Ink discharge nozzles are selected split in 40-, 20- or 10-nozzle blocks according to the Block Enable information in the even-numbered nozzle data and odd-numbered nozzle data.
Each selected block of nozzles is impressed with a Heat Enable signal generated with variable pulse widths according to the head rank, head temperature and printer temperature for optimized ink discharges. The nozzles are driven by heater boards in the nozzles to discharge inks. Optimal nozzle blocks are selected according to the print path.
The diagram below illustrates the relationship between a 40-block nozzle and nozzles driven.

F-2-4

2. Print drive timing

Each printhead houses 12 trains of nozzles, which share the same data transfer clock (Hx-CLK) and data latch pulses (Hx-LT). Even-numbered nozzle data (Hx-x-DATA-x-EV), odd-numbered nozzle data (Hx-x-DATA-x-OD) and the Heat Enable (Hx-x-HE-x) signal are generated for each nozzle train and controlled individually.

Printing is carried out in two ways through reciprocating motion of the carriage.

An encoder sensor mounted on the carriage generates a 150-dpi-pitched linear scale detection signal (ENCODER_A) and a signal (ENCODER_B) shifted 120 degrees in phase. The direction of carriage motion is detected from the status of the ENCODER_B signal relative to the leading edge of the ENCODER_A signal. The printhead is driven using a 2400-dpi timing signal (internal signal), which is generated by dividing the ENCODER_A signal detected at the 150 dpi timing into 16 equal sections.

Printing in the forward direction is triggered at the leading edge of the detection signal (ENCODER_A).

Printing in the backward direction is carried out the same way as printing in the forward direction but at the trailing edge of the detection signal (ENCODER_A), when the order of heated nozzles is reversed depending on the sequence of transfer of even-numbered nozzle data and odd-numbered nozzle data.

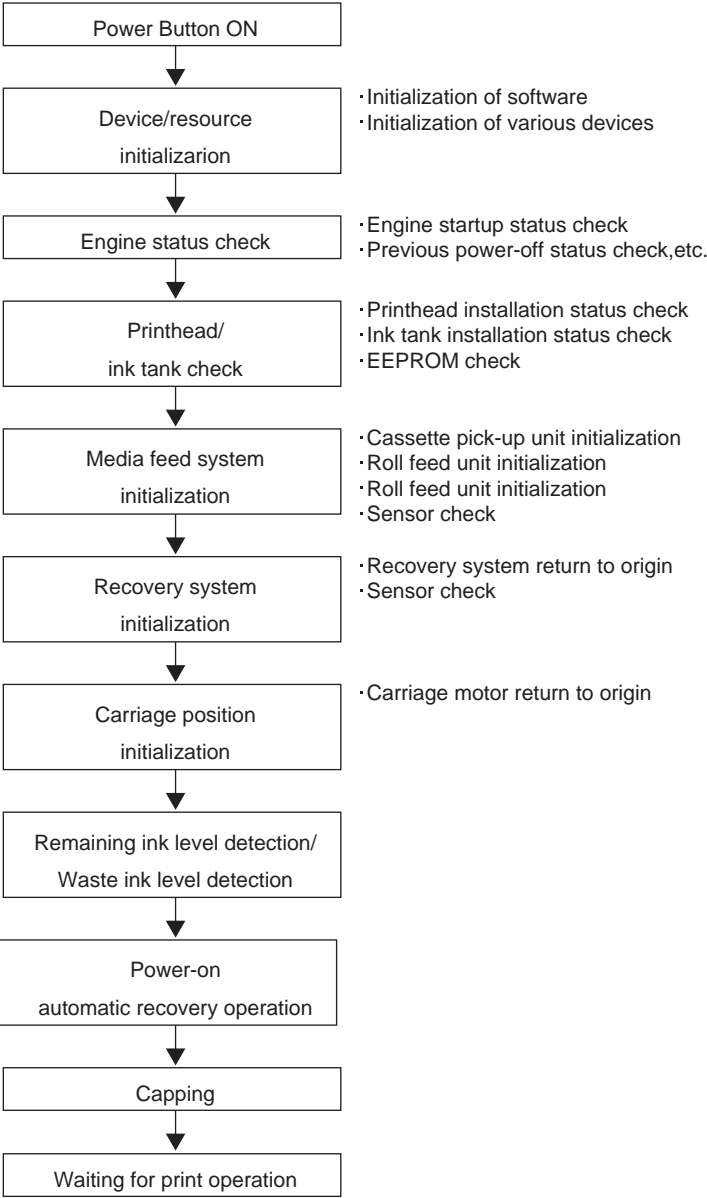

2.2 Firmware

2.2.1 Operation Sequence at Power-on

iPF5000 / iPF5100

Shown below is the flowchart of the initialization sequence from the moment the power is turned on to the moment the printer enters the online state. The time required for initialization is less than 1 minute*.

* This time does not include the time required for supplying ink and cleaning which takes place after the printer has been left unused for an extended period of time.

F-2-6

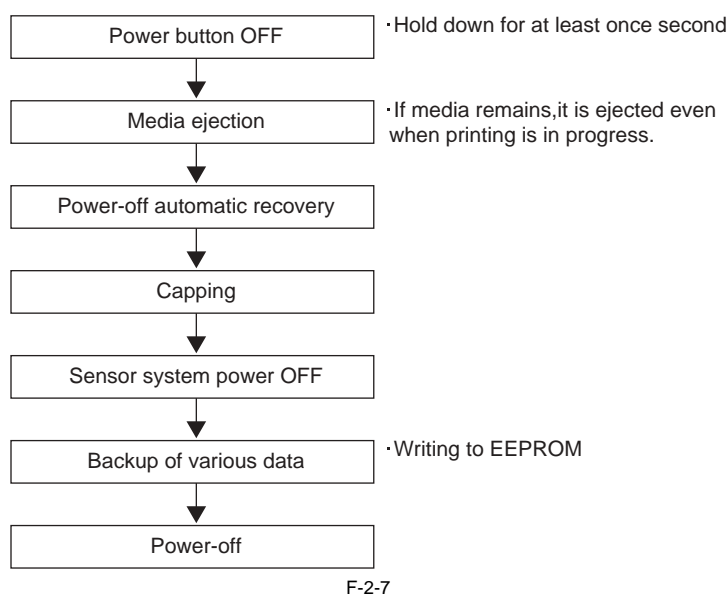

2.2.2 Operation Sequence at Power-off

iPF5000 / iPF5100

Turning off the power cuts off the voltage to all drive systems. At this time, the firmware starts the power-off sequence as shown below.

This printer immediately suspends all operations in progress and stops whenever the power cord is unplugged or a cover such as the top cover is opened. In this case, the printer may stop without capping the print head. If the power was turned on by unplugging the power cord, plug the power cord into the outlet, turn on the power again so that the printer enters the online state, and then press the Power button to turn off the power.

2.2.3 Print Control

iPF5000

1. Print mode

This printer is capable of fast, high-quality printing without blur and non-uniform density by changing the carriage operation, media feeding, other printing methods according to the selected media type, print quality, print data and so on.

Printing is performed for each color using a maximum of 16 paths in each print mode according to the selected print quality.

This reduces density irregularities caused by the variation in the amounts of ink discharged from individual nozzles. In addition, it shifts the printing timing so that the current ink layer is nearly fixed before the next ink layer is applied, thus minimizing bleeding.

Even in the same mode, the printer operates in a different way depending on the media setting made using the printer driver.

a) Draft mode

In the draft mode, image data is thinned out and a single band (equivalent to the width of a nozzle array) is printed using one or two paths.

To use this mode, select "Draft" under "Print Quality" in the printer driver.

b) Standard mode

In the standard mode, a single band (equivalent to the width of a nozzle array) is printed using 1-6 (1, 2, 4, or 6) paths.

To use this mode, select "Standard" under "Print Quality" in the printer driver.

c) High quality mode

In the high quality mode, a single band is printed using 2, 4, or 8 paths.

To use this mode, select "High" under "Print Quality" in the printer driver.

d) Highest quality mode

In the high quality mode, a single band is printed using 8 or 16 paths.

To use this mode, select "Highest" under "Print Quality" in the printer driver.

*1 The print engine may automatically select 1-way printing depending on the printing image type (graphic image, etc.). The printing direction can be selected using the printer driver.

2.2.4 Print Control

iPF5100

1. Print mode

This printer is capable of fast, high-quality printing without blur and non-uniform density by changing the carriage operation, media feeding, other printing methods according to the selected media type, print quality, print data and so on.

Printing is performed for each color using a maximum of 16 paths in each print mode according to the selected print quality.

This reduces density irregularities caused by the variation in the amounts of ink discharged from individual nozzles. In addition, it shifts the printing timing so that the current ink layer is nearly fixed before the next ink layer is applied, thus minimizing bleeding.

Even in the same mode, the printer operates in a different way depending on the media setting made using the printer driver.

a) Draft mode

In the draft mode, image data is thinned out and a single band (equivalent to the width of a nozzle array) is printed using one or two paths.

To use this mode, select "Draft" under "Print Quality" in the printer driver.

b) Standard mode

In the standard mode, a single band (equivalent to the width of a nozzle array) is printed using 4-8 (4, 6, or 8) paths.

To use this mode, select "Standard" under "Print Quality" in the printer driver.

c) High quality mode

In the high quality mode, a single band is printed using 8 or 12 paths.

To use this mode, select "High" under "Print Quality" in the printer driver.

d) Highest quality mode

In the high quality mode, a single band is printed using 12 or 16 paths.

To use this mode, select "Highest" under "Print Quality" in the printer driver.

2.2.5 Print Position Adjustment Function

iPF5000 / iPF5100

This printer has a printing position adjusting function to adjust the lateral and longitudinal printing positions and bidirectional printing position of the printhead mounted on the carriage as well as the media feed amount.

The printing position can be adjusted in two ways: "automatic adjustment" by which the multi sensor installed at the lower left of the carriage reads the printing position adjusting pattern and "manual adjustment" by which a print position adjusting pattern is printed with the printing conditions changed little by little to allow the user to enter the visually checked adjustment value from the operation panel.

Printing position adjustment requires A4-size or larger roll media or cut sheet.

2.2.6 Head Management

iPF5000 / iPF5100

This printer has a nozzle check function to detect any non-discharging nozzle. When a non-discharging nozzle is detected, the printer performs the print head cleaning operation. If the problem persists after completion of the print head cleaning operation, the non-discharged nozzles are automatically backed up by other nozzles.

2.2.7 Printhead Overheating Protection Control

iPF5000 / iPF5100

This printer performs printhead overheating protection control when an abnormally high temperature is detected in the printhead.

The printhead can overheat, for instance, when the print operation continues for some time with no ink supplied to the nozzles.

The overheating protection control function prevents a print head nozzle from becoming clogged or damaged due to excessive heat.

Overheating protection control is performed based on the temperatures detected by the head temperature sensors in the nozzle arrays. If overheating is detected in a single nozzle array, overheating protection control is performed at either of the following levels according to the temperature.

Protection level 1:

If the printhead temperature sensor detects a temperature above the limit, the carriage stops at the scan end position printer in the direction of travel according to the carriage's scan status.

Then, wait control is performed to allow the printhead to cool naturally. When the printhead temperature drops below the prescribed value or 30 seconds have lapsed since detection of the abnormal temperature, printing resumes.

Protection level 2:

When the head temperature sensor detects an abnormally high temperature, printing stops immediately, the carriage is moved to the home position, and the printhead is capped. In this case, an error code is shown on the display.

2.2.8 Pause between Pages

iPF5000 / iPF5100

To prevent ink blots form forming, this printer has a "pause between pages" function to hang down the printed paper from the platen to dry it and delivers it after lapse of the specified wait time.

The user can set the wait time using the printer drive. This function is particularly useful for printing on film-type sheets that requires extra long time to dry.

For borderless printing, 30 seconds of drying time is automatically set.

2.2.9 White Raster Skip

iPF5000 / iPF5100

To improve the printing throughput, this printer has a white raster skip function to skip the carriage scan operation for continuous blank segments in print data.

2.2.10 Sleep Mode

iPF5000 / iPF5100

This printer has a Sleep mode to reduce the standby power.

The printer automatically enters the Sleep mode (Power Save mode) when neither user operation nor data reception occurs for a preset period of time in the online or offline mode.

The printer wakes from the Sleep mode when the user presses any button on the operation panel or data is received from the host computer.

The time until the printer enters the Sleep mode can be changed from the operation panel. (Default: 5 minutes)

2.3 Printer Mechanical System

2.3.1 Outline

2.3.1.1 Outline

iPF5000 / iPF5100

The printer mechanism can be broadly divided into two major components: the ink passage and paper path.

The ink passage consists of an ink tank, a carriage unit having a printhead, a purge unit, and a maintenance cartridge unit which are used to supply, circulate, and suck ink.

The paper path consists of a cassette pick-up unit, roll feed unit, paper feed unit to support four types of media feeding, transport, and ejection.

This section provides an overview of these mechanical components.

F-2-8

2.3.2 Ink Passage

2.3.2.1 Ink Passage

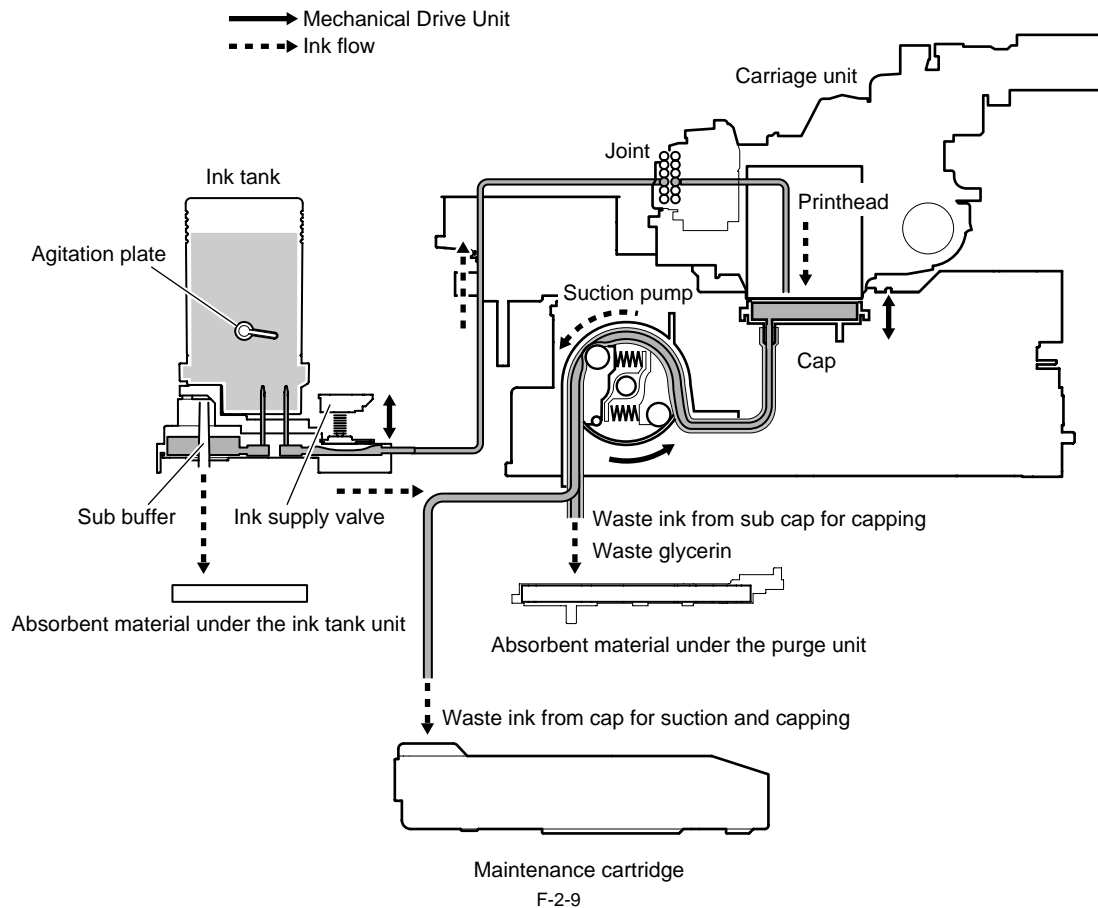

2.3.2.1.1 Overview of Ink Passage

0013-4299

iPF5000 / iPF5100

The ink passage consists of ink tanks, printhead, cap, waste ink collection unit, ink tubes for connecting the mechanical components, and an ink suction pump which is operated to suck ink.

A schematic diagram of the ink passage (for one color) and the ink flow are shown below.

a) Ink supply from ink tank to ink supply valve

The ink tank contains ink to be supplied to the printhead.

Ink flow from the ink tank to the ink tank supply valve due to the fluid level difference.

b) Ink flow from ink tank to sub-buffer

Ink flows from the ink tank to the sub-buffer due to the fluid level difference, and air enters the ink tank through the air passage of the sub-buffer, maintaining the pressure inside the ink tank constant.

If the ink in the sub-buffer exceeds the predetermined level, the excessive ink flows to the absorbent material under the ink tank.

c) Ink supply from ink supply valve to printhead

Ink is supplied from the ink tank to the printhead by opening the ink supply valve, capping the head, and operating the suction pump.

The ink sucked from the caps flows to the maintenance cartridge.

d) Ink supply during printing

During printing, the ink supply valve is held open to allow ink to flow from the ink tank to the printhead constantly due to the negative pressure generated by discharging of ink.

The waste ink used for printhead cleaning and borderless printing flows to the waste ink absorbent materials under the maintenance cartridge and purge unit in addition to the waste ink box.

If all of ink passages are opened (no ink tank is installed, the ink supply valve is opened, and the printhead fixer lever is opened) when the ink tube is filled with ink, the ink in the ink tube may reverse-flow due to the fluid level difference and ink may leak from the hollow needle of the ink tank.

Do not open all of the ink passages at the same time when the ink tube is filled with ink.

e) Agitation of ink in the ink tank

Ink in the ink tank is agitated to prevent precipitation of pigment-based ink in the ink tank.

This function is implemented by reverse-flowing ink to the ink tank by opening and closing the supply valve in succession. Inside the ink tank is provided with an agitation plate to assist agitation of ink. (The agitation plate is also provided in the

- Operation timing: When a new ink tank is installed or when 168 hours have lapsed since the previous agitation (the agitation is performed irrespective of the

whether the printer is printing or cleaning its head)

- Ink supply valve opening/closing count: 30 times (every 30 seconds)

If 336 or more hours have lapsed, the ink valve opening/closing count and the time until the next agitation are changed according to the length of the time lapsed.

2.3.2.2 Ink Tank Unit

2.3.2.2.1 Structure of Ink Tank Unit

0013-4300

iPF5000 / iPF5100

a) Ink tank

Each ink tank contains 130 ml of ink (the starter ink tank supplied with the printer contains 90 ml of ink) for each color. The amount of ink is memorized in the EEPROM mounted to the ink tank.

The amount of the ink remaining in the ink tank is detected as a dot count according to the data memorized in the EEPROM.

When the electrodes mounted to the hollow needle detect a con-conductive state, a message appears on the display to indicate that the ink is nearly empty. If the dot count reaches the prescribed value, the ink tank is considered to be empty.

b) Ink port

When the ink tank lock lever is pressed down, the hollow needle enters the ink port (covered with a rubber plug), establishing an ink passage between the printer and ink tank.

c) Air passage

When the ink tank lever of the printer is pressed down, the hollow needle enters the air passage (covered with a rubber plug) and thus the internal pressure of the ink tank is released, maintaining the internal pressure constant.

d) Notches for preventing incorrect insertion

The ink tanks have notches for preventing insertion. Wrong ink tanks cannot be installed in place due to these notches.

The ink tank lock lever can be lowered to start ink supply only when the ink tank has been installed in place.

e) Agitation plate

The agitation plate assists the ink agitation which is performed to prevent precipitation of ink.

F-2-10

f) Ink supply valve

The ink supply valve is located between the ink tank and ink tube to prevent ink leakage from occurring when the ink tube on the ink tank side is opened during replacement of the ink tank.

The ink supply valve is opened and closed by the valve open/close mechanism which is driven by the valve motor.

The ink tank unit consists of two tank bases each of which contains ink tanks for three colors and the ink tubes for six colors.

The ink supply valve for each color is driven by the valve cam through a link. Ink supply valves for all colors are opened and closed at the same time.

F-2-11

2.3.2.3 Carriage Unit

2.3.2.3.1 Functions of Carriage Unit

0013-4306

iPF5000

a) Printhead mounting function

The carriage mechanically locks the printhead and is connected to the printhead via the terminals on the carriage PCB.

b) Control function

The carriage incorporates a carriage PCB that relays the signal from the main controller, a linear encoder that generates a print timing signal based on the detected carriage position, and a multi sensor that detects the media width and skewing to adjust the registration and height. The carriage PCB and main controller PCB are connected with a flexible cable.

c) Carriage drive function

The carriage motor moves the carriage back and forth on the platen via the carriage belt.

d) Printhead maintenance function

The printer performs the printhead cleaning operation such as printhead wiping and suction at the home position of the carriage. The cleaning operation accompanied by ink suction is performed only at the left cap.

e) Nozzle check function

The printer detects a non-discharging nozzle using the head management sensor attached to the maintenance jet tray by discharging ink with the carriage stopped at the maintenance jet tray.

f) Media thickness adjustment function

If the gap between the printhead face and the media increases due to the difference in media thickness, cockling, curling, and so on, more ink mist is generated. In reverse, if the gap decreases, the head can touch the media surface more frequently.

To maintain the proper gap, the remote lifter is driven to adjust the head height automatically according to the selected media type, media supply method, printing conditions (borderless/priority print type), environmental conditions (temperature/humidity), and the result of measurement by the multi sensor.

The relationship between media types and head heights (from the platen) is summarized in the table below. Note that the head height is adjusted with priority given to the media gap measured by the multi sensor.

T-2-5

Head height (mm)	Media type (Value in parentheses:mm)
1.4	Glossy paper(0.2),plain paper(line drawing)(0.1)
1.8	Plain paper(0.1)
2	Coated paper(0.5)
2.2	Semi-glossy canvas(0.5)
3.2	Board paper(1.5)

g) Paper leading edge detection function/paper width detection function/skewing detection function

The leading edge, width, and skewing of the paper fed to the platen is detected by the multi sensor mounted at the lower left of the carriage.

h) Auto print head position adjustment function

The adjustment pattern printed on paper is read by the multi sensor mounted at the lower left of the carriage, thus adjusting the printing timings of each printhead automatically.

i) Remaining roll media detection function

The amount of the remaining roll paper can be detected using the multi sensor mounted at the lower left of the carriage by printing a barcode at delivery of the roll media.

j) Internal temperature detection function

The internal temperature around the printhead is detected using the thermistor mounted on the carriage PCB.

2.3.2.3.2 Functions of Carriage Unit

0016-8194

iPF5100

a) Printhead mounting function

The carriage mechanically locks the printhead and is connected to the printhead via the terminals on the carriage PCB.

b) Control function

The carriage incorporates a carriage PCB that relays the signal from the main controller, a linear encoder that generates a print timing signal based on the detected carriage position, and a multi sensor that detects the media width and skewing to adjust the registration and height. The carriage PCB and main controller PCB are connected with a flexible cable.

c) Carriage drive function

The carriage motor moves the carriage back and forth on the platen via the carriage belt.

d) Printhead maintenance function

The printer performs the printhead cleaning operation such as printhead wiping and suction at the home position of the carriage. The cleaning operation accompanied by ink suction is performed only at the left cap.

e) Nozzle check function

The printer detects a non-discharging nozzle using the head management sensor attached to the maintenance jet tray by discharging ink with the carriage stopped at the maintenance jet tray.

f) Media thickness adjustment function

If the gap between the printhead face and the media increases due to the difference in media thickness, cockling, curling, and so on, more ink mist is generated. In reverse, if the gap decreases, the head can touch the media surface more frequently.

To maintain the proper gap, the remote lifter is driven to adjust the head height automatically according to the selected media type, media supply method, printing conditions (borderless/priority print type), environmental conditions (temperature/humidity), and the result of measurement by the multi sensor.

The relationship between media types and head heights (from the platen) is summarized in the table below. Note that the head height is adjusted with priority given to the media gap measured by the multi sensor.

T-2-6

Head height (mm)	Media type (Value in parentheses:mm)
1.4	Glossy paper(0.2),plain paper(line drawing)(0.1)
1.8	Plain paper(0.1)
2	Coated paper(0.5)
2.2	Semi-glossy canvas(0.5)
3.2	Board paper(1.5)

g) Paper leading edge detection function/paper width detection function/skewing detection function

The leading edge, width, and skewing of the paper fed to the platen is detected by the multi sensor mounted at the lower left of the carriage.

h) Auto print head position adjustment function

The adjustment pattern printed on paper is read by the multi sensor mounted at the lower left of the carriage, thus adjusting the printing timings of each printhead automatically.

i) Color calibration function

A multi sensor installed in the lower left part of the carriage reads the adjustment pattern printed on paper and corrects the coloring of the printed matter automatically.

The main menu choice "Calibration" can be executed to correct the coloring of printed matter in the wake of initial installation of the printer, the replacement of its printheads or otherwise changes in the coloring of printed matter.

j) Remaining roll media detection function

The amount of the remaining roll paper can be detected using the multi sensor mounted at the lower left of the carriage by printing a barcode at delivery of the roll media.

k) Internal temperature detection function

The internal temperature around the printhead is detected using the thermistor mounted on the carriage PCB.

2.3.2.3.3 Structure of Carriage Unit

0016-8195

iPF5100

a) Printhead mounting unit

The printhead is secured to the carriage by the printhead fixer lever.

When the printhead is secured to the carriage, the signal contact of the carriage PCB touches the signal contact point of the printhead, allowing print signals to be transmitted.

The ink passage from the ink tank is connected to the printhead through the ink tube and joint.

**b) Ink port**

Ink is supplied to the printhead through the ink tubes.

Ink tube run through the ink tube guide mounted on the carriage and move in conjunction with the carriage.

c) Control unit

The carriage PCB is connected to the main controller PCB with a flexible cable. The flexible cable moves in conjunction with the carriage.

A photo-coupler-type encoder is mounted at the top of the rear of the carriage to detect the slit on the linear scale during carriage movement, thus controlling the print timing.

d) Carriage drive unit

Mechanical misalignment of the printhead in the vertical and horizontal direction and in bidirectional printing can be corrected by changing the print timing using the "Adjust Printer" option in the Main menu.

The carriage motor (DC motor) moves the carriage back and forth on the platen via the carriage belt.

The carriage home position is the capping position to which the carriage is slowly moved when the power is turned on.

When the position read on the linear scale is set as the home position for position control, the carriage motor moves based on control signal output from the main controller.

F-2-13

e) Printhead maintenance unit

The printer performs the printhead cleaning operation at the home position of the carriage.

The purge motor is used for wiping. When the carriage is stationary at the home position, the printhead installed in the carriage is wiped with the wiper blade. The wiper blade is pressed against the absorbent material soaked with glycerin so that the wiper blade is moistened with glycerin, thus improving the wiping performance.

Idle ejection of ink is performed on the cap, the borderless ink tray of the platen, and paper.

The suction operation is performed by rotating the pump motor after completion of capping. (Note that the cleaning operation accompanied by suction is performed only at the left cap.)

f) Carriage height adjustment

When the lift motor is driven to rotate the carriage height changing cams installed at both ends of the shaft, the height of the carriage shaft is varied to change the spacing between the face of the printheads and the paper.

The printhead height is detected by the multisensor installed in the lower left part of the carriage.

g) Multi sensor unit

The multi sensor mounted at the lower left of the carriage is composed of four LEDs (red, blue, green, infrared) and two light-sensitive elements which are used to detect the leading edge, width, and skewing of paper and adjust the color calibration and head height.

The multi sensor reference plate is provided with a white plate. By measuring the quantity of the reflected light from the white plate, the reference value for gap measurement is computed.

(Service mode: SERVICE MODE> ADJUST> GAP CALIB.)

h) Shaft cleaner units

The shaft cleaners mounted at the left and right of the carriage are used to clean the carriage and apply oil to the shaft.

i) Internal temperature detection

A thermistor for measuring the internal temperature is mounted on the carriage PCB on the rear of the head holder.

2.3.2.3.4 Structure of Carriage Unit

0013-4344

iPF5000

a) Printhead mounting unit

The printhead is secured to the carriage by the printhead fixer lever.

When the printhead is secured to the carriage, the signal contact of the carriage PCB touches the signal contact point of the printhead, allowing print signals to be transmitted.

The ink passage from the ink tank is connected to the printhead through the ink tube and joint.

**b) Ink port**

Ink is supplied to the printhead through the ink tubes.

Ink tube run through the ink tube guide mounted on the carriage and move in conjunction with the carriage.

c) Control unit

The carriage PCB is connected to the main controller PCB with a flexible cable. The flexible cable moves in conjunction with the carriage.

A photo-coupler-type encoder is mounted at the top of the rear of the carriage to detect the slit on the linear scale during carriage movement, thus controlling the print timing.

d) Carriage drive unit

Mechanical misalignment of the printhead in the vertical and horizontal direction and in bidirectional printing can be corrected by changing the print timing using the "Adjust Printer" option in the Main menu.

The carriage motor (DC motor) moves the carriage back and forth on the platen via the carriage belt.

The carriage home position is the capping position to which the carriage is slowly moved when the power is turned on.

When the position read on the linear scale is set as the home position for position control, the carriage motor moves based on control signal output from the main controller.

F-2-15

e) Printhead maintenance unit

The printer performs the printhead cleaning operation at the home position of the carriage.

The purge motor is used for wiping. When the carriage is stationary at the home position, the printhead installed in the carriage is wiped with the wiper blade. The wiper blade is pressed against the absorbent material soaked with glycerin so that the wiper blade is moistened with glycerin, thus improving the wiping performance.

Idle ejection of ink is performed on the cap, the borderless ink tray of the platen, and paper.

The suction operation is performed by rotating the pump motor after completion of capping. (Note that the cleaning operation accompanied by suction is performed only at the left cap.)

f) Media thickness adjustment unit

The gap between the printhead face and media is changed with the rotation of the carriage height changing cam driven by the lift motor.

The height of the printhead is detected by the multi sensor mounted at the lower left of the carriage.

g) Multi sensor unit

The multi sensor mounted at the lower left of the carriage is composed of four LEDs (red, blue, green, infrared) and two light-sensitive elements which are used to detect the leading edge, width, and skewing of paper and adjust the registration and head height.

The multi sensor reference plate is provided with a white plate. By measuring the quantity of the reflected light from the white plate, the reference value for gap measurement is computed.

(Service mode: SERVICE MODE>ADJUST>GAP CALIB)

h) Shaft cleaner units

The shaft cleaners mounted at the left and right of the carriage are used to clean the carriage and apply oil to the shaft.

i) Internal temperature detection

A thermistor for measuring the internal temperature is mounted on the carriage PCB on the rear of the head holder.

2.3.2.4 Printhead

2.3.2.4.1 Structure of Printhead

0013-4821

iPF5000 / iPF5100

A printhead incorporates six nozzle arrays. Each nozzle can be controlled individually so that a six-color discharge action can be performed by a single printhead.

a) Nozzle arrays

A total of 2560 nozzles are arranged in a two-column staggered pattern.

In each column, 1280 nozzles are arranged in a staggered pattern at intervals of 600 dpi, forming a 2560-nozzle arranged at intervals of 1200 dpi.

F-2-16

b) Nozzle structure

b) Nozzle structure
Ink supplied from the ink tank is filtered by a mesh ink filter, and the supplied to the nozzles.

Ink is supplied from the ink tank is filtered by a mesh ink filter, and the supplied to the nozzles. Ink is supplied from the shared ink chamber to the nozzles. When the head driving current is applied to the nozzle heater, ink boils and form bubbles so that ink droplets are discharged from the nozzles.

F-2-17

2.3.2.5 Purge Unit

2.3.2.5.1 Functions of Purge Unit

0013-4347

iPF5000 / iPF5100

To maintain high print quality, the purge unit performs maintenance of the nozzles o the printhead. The purge unit supports a capping function, cleaning function, and ink supply function.

a) Capping function

The capping function presses the cap of the purge unit against the face plate on the nozzle section of the printhead to prevent nozzle drying and dust adhesion. Capping is performed when printing is complete, at the start of the suction operation, and when switching to the standby state due to an error. The capping function also establishes the ink passage between the printhead and purge unit.

b) Cleaning function

The cleaning function restores the printhead to the state where ink can be easily discharged from nozzles. This function includes the following three types of operations.

- Wiping operation

This operation is performed to remove paper fibers and dried ink from to the face plate.

- Pumping operation

This operation is performed to remove ink from the nozzles and fill the nozzles with fresh ink.

- Maintenance jet operation

This operation is performed to spray ink from the nozzles to the cap, borderless ink jet tray, an paper to remove bubbles in the nozzles and dust and other foreign particles.

c) Ink supply function

The suction pump of the purge unit operates together with the ink supply valve to supply ink to the printhead during the initial filling and ink level adjustment.

Details of the cleaning function are shown in the table below.

T-2-7

Cleaning mode	Name of Service mode or PRINT INF (Name of Main Menu)	Operation	Description of cleaning
Cleaning 1	CLN-A-1/CLN-M-1 (Head Cleaning A)	Normal cleaning	Removes dried ink from nozzles, thick ink accumulated on the face, and paper particles.
Cleaning 2	CLN-A-2	Ink level adjustment and cleaning	Adjust the ink level in the head by suction, and then performs normal cleaning.
Cleaning 3	CLN-A-3	Initial filling ink	Fills the empty tube (during initial installation) with ink, and then performs normal cleaning.
Cleaning 4	CLN-M-4 (Replace P.head)	Ink drainage for head replacement	Drains ink to replace the head (drains only the ink in the head).
Cleaning 5	CLN-M-5 (Move Printer)	Ink drainage for secondary transport	Drains ink from the head and tube for secondary transport.
Cleaning 6	CLN-A-6/CLN-M-6 (Head Cleaning B)	Normal (strong) cleaning	Performs suction stronger than when adjusting the ink filling amount in the head or normal cleaning to unclog nozzles.
Cleaning 7	CLN-A-7	Aging	Performs idle ejection after replacement of the head.
Cleaning 10	CLN-A-10 (Move Printer)	Ink filling after secondary transport	Fills the empty tube (during installation after secondary transport) with ink, and performs normal cleaning.
Cleaning 11	CLN-A-11	Ink filling after head replacement	Performs normal cleaning after head replacement and ink filling.
Cleaning 15	CLN-A-15	Dot count suction	Performs suction to remove ink adhered to dried nozzles and thick ink accumulated on the face when the dot count reaches the prescribed value.
Cleaning 16	CLN-A-16	Precipitated ink agitation	Performs the agitation (ink supply valve open/close) operation to prevent the ink ingredient from precipitating.
Cleaning 17	CLN-A-17	Cleaning (weak)	Performs cleaning weaker than normal cleaning to unclog nozzles.

Cleaning operation timings are as follows.

T-2-8

Printer status				Cleaning operation	Consumption (typ.)*1
Standby	168 hours elapsed capped			Cleaning 1 (Normal Cleaning)	1g
	At least 720 hours elapsed since the last session of Cleaning 2, 3, 6 or 10 (360 hours after initial installation)			Cleaning 6 (Normal (strong) Cleaning)	5g
	At initial installation and 96 hours elapsed since the last session of Cleaning 16			Cleaning 16 (Precipitated ink agitation)	-
	1 hour elapsed capped with a specified number of dots discharged per chip completed after last wiping			Wiping + Idle ejection	0.013g
Power-on	At initial installation			Cleaning 3 (initial filling ink)	15g
	Both heads and inks available	The print operation has completed.	168 to 720 hours elapsed capped	Cleaning 1 (Normal Cleaning)	1g
			At least 720 hours elapsed since the last session of Cleaning 2, 3, 6 or 10 (360 hours after initial installation)	Cleaning 6 (Normal (strong) Cleaning)	5g
			At least 96 hours elapsed since the last session of Cleaning 16	Cleaning 16 (Precipitated ink agitation)	-
			At least 1 hour elapsed capped with a specified number of dots discharged per chip completed after last wiping	Wiping + Idle ejection	0.013g
		Print operation aborted (uncapped) and CR error occurring	Up to 72 hours elapsed after an abort	Cleaning 1 (Normal Cleaning)	1g
			Over 72 hours elapsed after an abort	Cleaning 6 (Normal (strong) Cleaning)	5g
		Print operation aborted (uncapped) and no CR error occurring		Cleaning 11 (ink filling after head replacement)	10g
	No heads are available			Cleaning 10 (ink filling on secondary transport)	15g
Power off	Specified number of dots discharged per chip completed since the last session of wiping			Wiping + Idle ejection	0.013g
Before the start of printing	Less than 168 hours elapsed capped			Idle ejection	0.013g
	At least 168 hours elapsed capped			Cleaning 1 (Normal Cleaning)	1g
	Before printing in the wake of an error occurrence			Cleaning 1 (Normal Cleaning)	1g
Printing	Before scanning while printing			Idle ejection (+Wiping)	- (0.013g)
After the end of printing	A specified number of dots (color) discharged per chip since the last session of Cleaning 2, 3, 6 or 10			Cleaning 6 (Normal (strong) Cleaning)	5g
	A specified number of dots discharged per chip after the last session of wiping			Wiping + Idle ejection	0.013g
	3 minutes elapsed since the last session of capping			Wiping + Idle ejection	0.013g
	Total 2 hours elapsed uncapped since the last session of Cleaning 1, 2, 3, 6 or 10			Cleaning 1 (Normal Cleaning)	1g
When the Head Cleaning menu choice is executed	Manual Cleaning (Head Cleaning A)			Cleaning 1 (Normal Cleaning)	1g
	Manual cleaning (Head cleaning B)			Cleaning 6 (Normal (strong) Cleaning)	5g
When the Replace Print Head menu choice is executed	After head replacement			Cleaning 2 (ink level adjustment and cleaning) + Cleaning 4 (ink drainage for head replacement)	10g
When the Move Printer menu choice is executed	After the Move Printer menu choice is executed			Cleaning 5 (ink drainage for secondary transport)	10g
	After power-on at secondary installation			After power-on at secondary installation	15g

T-2-9

*1: Quantities of ink consumption by nozzle train

2.3.2.5.2 Structure of Purge Unit

iPF5000 / iPF5100

0013-4382

F-2-18

a) Cap unit

The cap unit is used to cap the print head nozzles during capping and cleaning. The portion that touches the face plate is made from rubber. Two left caps are arranged for the printhead (six arrays of nozzles) installed in the carriage.

During cleaning, the caps used for both suction and capping are used to suck ink from the printhead using the suction pump.

Each of the right caps is used to cap the six arrays of nozzles.

This cap is used only for capping.

During capping, the caps are raised by the cap cams operated by the purge motor to cover the arrays when the carriage has moved to the home position, thus protecting the nozzles.

F-2-19

b) Wiper unit

The wiper unit operated by the purge motor wipes the print head face.
The printer is provided with a pair of wiper blades for better wiping performance.
The wiping operation is performed by a "slide wipe" method by which the purge motor rotates (in the normal direction) to slide the wiper blade via the wiper cam.
It is performed by a constant-speed movement toward the front of the printer as viewed from the printer front.
The wiper blade, which is positioned at right angles to the print head, wipes the entire printhead face, and then the narrow blade is used to wipe the nozzle arrays.
After wiping, the wipe blades are cleaned before they are set at the wiping position so that the maximum wiping performance is obtained.
During the wiper blade cleaning, the ink removed from the head is rubbed off by the ink scraper.
Absorbent material soaked with glycerin is pressed against the wiper blades to enhance the wiping performance. The amount of glycerin used (tank capacity: 50 ml) is managed by counting the number of times the wiper blade is pressed against the absorbent material. When the count reaches the following value, an advance notice of replacement (printing can be continued) or a request for replacement (service call error) is displayed.

T-2-10

Advance notice of replacement	47,500times
Service call	50,000times

F-2-20

c) Pump unit

This printer uses tube pumps (suction pumps) that press on the ink tubes using rollers to produce negative pressure, thus sucking ink.
Two rollers are used to press on a single tube one after another to control the amount of ink sucked.
The roller rotation timing is detected by the pump cam sensor, and the amount of rotation is controlled by the driving of the purge motor.

To maintenance cartridge.
The ink from the sub cap flows to the absorbent material under the purge unit.

F-2-21

2.3.2.6 Maintenance Cartridge

2.3.2.6.1 Maintenance cartridge

0013-4161

iPF5000 / iPF5100

a) Maintenance cartridge

The maintenance cartridge can contain up to approximately 957 ml (approx. 1021 g) of waste ink (including the moisture evaporation in the waste ink).

b) Detection of waste ink in maintenance cartridge

The quantity of waste ink in the maintenance cartridge is measured by counting dots.

When the quantity of waste ink collected in the maintenance cartridge reaches 80% of the cartridge capacity, a warning message "MTCart Full Soon" appears to indicate that the maintenance cartridge is nearly full.

If printing is continued, an error message "Maint Cartridge Replace Cart" appears to indicate that the maintenance cartridge is full.

When this error occurs, the printer judges the maintenance cartridge as being full of waste ink and stops printing immediately. The printer stops even if printing is in progress, and it will not operate until the maintenance cartridge is replaced with a new one.

The maintenance cartridge incorporates an EEPROM. The main controller reads and writes the contents of the EEPROM to control the maintenance cartridge status.

F-2-22

2.3.2.7 Air Flow

2.3.2.7.1 Air flow

0013-4162

iPF5000

This printer has two fans, a mist fan used to collect mist and a suction fan used to suck media onto the platen.

Ink mist that floats inside the printer and ink splashes from the media are collected in the filter through the front duct and the air flow path inside the printer by the driving of the mist fan, thus preventing mist from discharged outside the printer.

During operation of the suction fan, suspended substances are collected in the filter through the airflow path inside the printer, preventing them from being emitted to outside of the printer.

2.3.2.7.2 Air flow

0016-8199

iPF5000 / iPF5100

This printer has two fans, a mist fan used to collect mist and a suction fan used to suck media onto the platen.

Ink mist that floats inside the printer and ink splashes from the media are collected in the filter through the front duct and the air flow path inside the printer by the driving of the mist fan, thus preventing mist from discharged outside the printer.

During operation of the suction fan, suspended substances are collected in the filter through the airflow path inside the printer, preventing them from being emitted to outside of the printer.

2.3.3 Paper Path

2.3.3.1 Outline

2.3.3.1.1 Overview of Paper Path

iPF5000 / iPF5100

0013-4163

The paper path consist of a cassette pick-up unit, roll feed unit, feed roller unit, pinch roller drive unit that applies/releases pressure to/from the pinch roller, spur drive unit that moves the spur up/down, and various sensors that detect the media feed status, allowing media to be fed in four ways, fed, and ejected.

F-2-27

2.3.3.2 Paper Path

2.3.3.2.1 Structure of Cassette Pick-up Unit

0013-4167

iPF5000 / iPF5100

The paper loaded in the cassette is fed by the pick-up roller, and then fed onto the platen via the feed roller.

The pick-up roller unit has a cassette separation roller to prevent multiple sheets from being fed at the same time. The excess sheets separated by the separation roller are returned to the cassette using the sheet return guide.

The sheet supplied from the cassette is detected by the cassette pick-up sensor and paper detection sensor. If no sheet is detected within the specified time, this problem is detected as a paper jam.

F-2-28

Cassette pick-up sensor

F-2-29

The cassette pick-up roller and cassette feed roller are driven by the cassette motor under the control of the cassette encoder.

cassette encoder

F-2-30

At the bottom of the cassette unit are mounted a cassette detection sensor and a cassette paper detection sensor to check whether a cassette is loaded and whether paper is present in the cassette.
The pressure plate is moved up and down by the cam and the movement is detected by the cassette cam sensor.

F-2-31

F-2-32

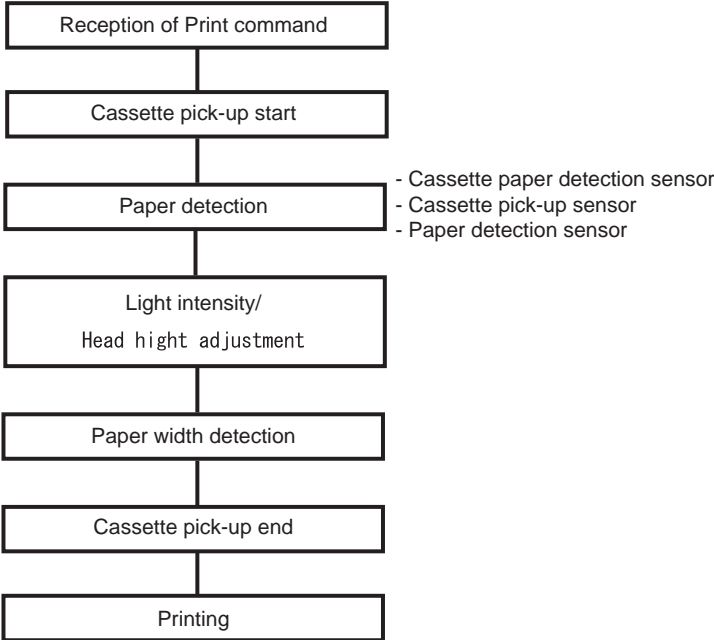

F-2-33

2.3.3.2.2 Cassette Pick-up Sequence

0013-4172

iPF5000 / iPF5100

When a Print command is received with paper loaded in the cassette, cassette pick-up operation starts. The paper supplied from the cassette is checked for normal feeding using the sensors provided along the paper feed path. When the paper is fed by the specified length, the multi sensor adjusts the light intensity and the head hight, detects the paper width, and then starts printing. During feeding, paper is fed by the cassette pick-up roller and cassette feed roller. During printing, paper is fed by the feed rollers. In paper is fed from the cassette, the multi sensor does not detect the leading edge of paper and skewed feeding of paper.

F-2-34

2.3.3.2.3 Structure of Roll Media Pick-up Unit

0013-4170

iPF5000 / iPF5100

When the roll media sensor detects media loaded with the printer powered, the roll media pick-up roller touches the media to rotate the roll media feed roller, thus feeding the roll media onto the platen. Roll media feeding is controlled by the roll motor and roll feed unit PCB. The roll media pick-up roller is moved up and down by the cam, and the cam movement is detected by the roll media cam sensor. When the printer is turned on with roll media loaded, the roll media pick-up operation starts automatically.

F-2-35

If the roll media sensor detects that there is no roll during roll media pick-up operation, the roll media is ejected.

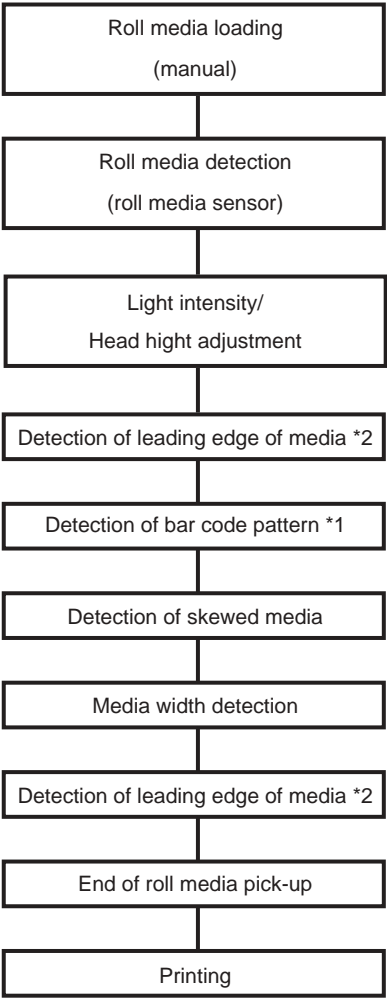

F-2-36

2.3.3.2.4 Roll Media Pick-up Sequence

0013-4173

iPF5000 / iPF5100

When the roll media detects the loaded roll media, roll media pick-up operation starts.
When media is fed from the auto roll feed unit by the specified length, the multi sensor performs the adjustments and detection shown below, thus completing the roll media pick-up operation.
Roll media is fed by controlling the roll motor and feed motor of the auto roll feed unit.

*1
- This operation is performed only when "ON" is selected for "Detect Remaining Roll Media".
- If the roll media does not have a bar code pattern on it, enter the length of the roll media using the menu on the operation panel.

*2
- The purpose of the first leading edge detection is to detect presence of media.
- The purpose of the second leading edge detection is to detect the printing start position.

2.3.3.2.5 Structure of the Manual Feed Unit

iPF5000 / iPF5100

0013-4171

a) Manual feed (from front)

The cut sheet fed from the front (ejection unit) of the printer is fed to the rear of the printer [1], and then fed onto platen [2] for printing.

F-2-38

This method of feeding paper can be used only when an accept media type is selected from the Manual Feed menu in the use mode. If you select the Manual Feed menu, the pinch roller unit moves up to allow you to feed paper from the front of the printer according to the message shown on the operation panel.

The pinch roller unit is moved up and down by the lift motor. The cam which is also operated by the lift motor via gears moves up and down the pinch roller.

F-2-39

The pick-up timing of the paper fed to the rear of the printer is controlled by the paper detection sensor.

F-2-40

b) Manual feed (from rear)

The paper loaded in the paper tray provided at the rear of the printer is fed onto the platen for printing. This method of feeding paper can be used only when an acceptable media type is selected from the Manual Feed menu in the user mode. The pick-up timing of the paper loaded in the rear paper tray according to the message shown on the operation panel is controlled by the paper detection sensor.

F-2-41

2.3.3.2.6 Manual Feed (from Front) Sequence

0013-4174

iPF5000 / iPF5100

This sequence can be performed according to the messages shown on the operation panel only when a specific type of media is selected after selecting the manual feed mode from the menu shown on the operation panel. When a cut sheet is loaded according to the message shown on the operation panel, the printer performs various adjustments and detection using the multi sensor and then feeds the cut sheet to the rear of the printer. At this time, the multi sensor detects skewed feeding and leading edge of the cut sheet, thus completing the paper pick-up operation.

During printing, the cut sheet is fed by controlling the rotation of the feed roller according to the selected print mode.

F-2-42

2.3.3.2.7 Manual Feed (from Rear) Sequence

0013-4176

iPF5000 / iPF5100

This sequence can be performed according to the messages shown on the operation panel only when a specific type of media is selected after selecting the manual feed mode from the menu shown on the operation panel. When the cut sheet loaded at the back of the printer is detected by the sensor, the printer starts feeding the cut sheet. After this, the printer performs various adjustments and detection using the multi sensor, thus completing the paper pick-up operation.

During printing, the cut sheet is fed by controlling the rotation of the feed roller according to the selected print mode.

*1

The auto roll feed unit starts feeding the cut sheet when the roll media detection sensor detects the media. When the auto roll feed unit is not mounted, the printer starts feeding the media when the paper detection sensor detects the media.

F-2-43

2.3.3.2.8 Structure of Feed Roller Unit

0013-4178

iPF5000

The feed roller unit consists of media feeding mechanisms such as feed rollers driven by the feed motor and the pinch roller unit operating in conjunction with the feed rollers.

While being held flat on the platen, media is fed horizontally under the printhead.

The feed roller unit has a sensor that detects the media feed status and a sensor that detects the status of the mechanisms that constitute the paper path.

F-2-44

2.3.3.2.9 Structure of Feed Roller Unit

0016-8218

iPF5000 / iPF5100

The feed roller unit consists of media feeding mechanisms such as feed rollers driven by the feed motor and the pinch roller unit operating in conjunction with the feed rollers.

While being held flat on the platen, media is fed horizontally under the printhead.

The feed roller unit has a sensor that detects the media feed status and a sensor that detects the status of the mechanisms that constitute the paper path.

F-2-45

2.3.3.2.10 Feed Roller Eccentricity Detection Function

0013-4206

iPF5000

Media are fed by the feed roller at regular intervals.

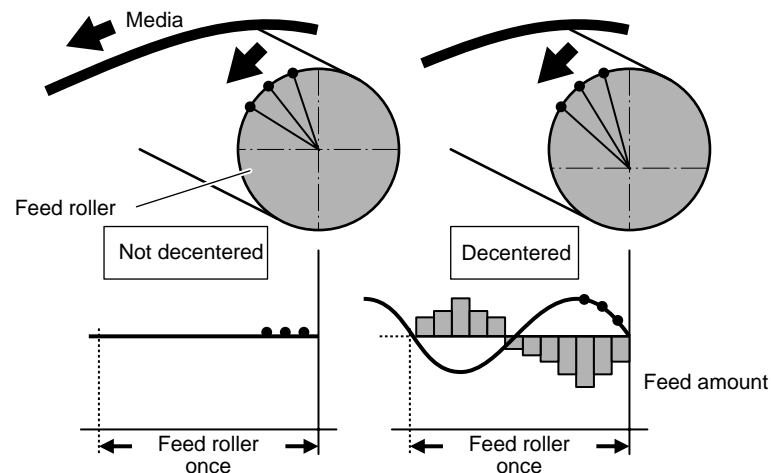

Irregular feeding of media due to the feed roller eccentricity problem, irregular printing can occur in the media feeding direction periodically.

To prevent this, the feed error encoder and feed roller HP sensor detect the presence and amount of feed roller eccentricity every rotation of the feed roller.

This function is called the feed roller eccentricity detection function. If eccentricity is detected, the media feed mount is compensated for according to the amount of eccentricity.

F-2-46

F-2-47

2.3.3.2.11 Feed Roller Eccentricity Detection Function

0016-8219

iPF5000 / iPF5100

Media are fed by the feed roller at regular intervals.

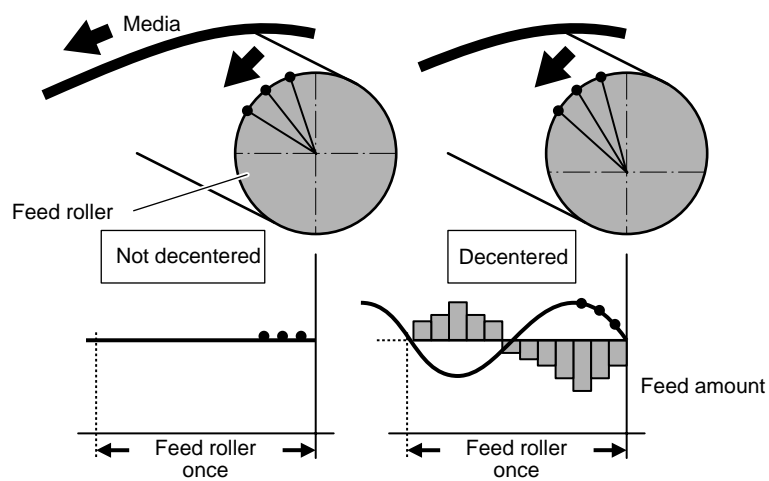

Irregular feeding of media due to the feed roller eccentricity problem, irregular printing can occur in the media feeding direction periodically.

To prevent this, the feed roller encoder sensor and feed roller HP sensor detect the presence and amount of feed roller eccentricity every rotation of the feed roller.

This function is called the feed roller eccentricity detection function. If eccentricity is detected, the media feed mount is compensated for according to the amount of eccentricity.

F-2-48

F-2-49

2.3.3.2.12 Structure of Ejection Sour

0013-4208

iPF5000

a) Outline

The ejection spur unit consists of a spur, a spur motor that moves the spur, a spur cam sensor, and an eject roller.

b) Spur lift mechanism

The spur must be moved up and down according to the selected media type and feed mode. The spur motor and spur cam sensor are used to control the spur stop position.

- In case of manual feed from front

When the above mode is selected in the user mode, the spur moves to the upper limit position and then stops.

- Stop position depending on media type

To prevent the spur from damaging the media, the spur stops at a proper position according to the media type selected in the user mode.

c) Eject roller drive

The drive power of the eject roller is transmitted from the feed roller via the drive belt.

2.3.3.2.13 Structure of Ejection Spur

0016-8220

iPF5000 / iPF5100

a) Outline

The ejection spur unit consists of a spur, a spur motor that moves the spur, a spur cam sensor, and an eject roller.

b) Spur lift mechanism

The spur must be moved up and down according to the selected media type and feed mode. The spur motor and spur cam sensor are used to control the spur stop position.

- In case of manual feed from front

When the above mode is selected in the user mode, the spur moves to the upper limit position and then stops.

- Stop position depending on media type

To prevent the spur from damaging the media, the spur stops at a proper position according to the media type selected in the user mode.

c) Eject roller drive

The drive power of the eject roller is transmitted from the feed roller via the drive belt.

2.3.3.3 Cutter Unit

2.3.3.3.1 Structure of the cutter unit

0013-4209

iPF5000 / iPF5100

If roll media are used, the cutter unit attached on the front of the spur unit cuts the leading end of the media on loading and cuts the media on ejection. Whether to perform cutting or not is determined by the choice of the main menu and the specifications of the printer driver.

The cutter unit is moved up and down by the cutter lift motor. When cut sheets are used, the cutter unit escapes to the specified position (moves up) to prevent the trailing edge of the ejected cut sheet from remaining in the cutter unit.

The cutter in the cutter unit stands by at the cutter home position, except when it cuts roll media. Power from the cutter drive motor is imparted to the circular belt to move the cutter from left to right for cutting roll media.

F-2-52

2.4 Printer Electrical System

2.4.1 Outline

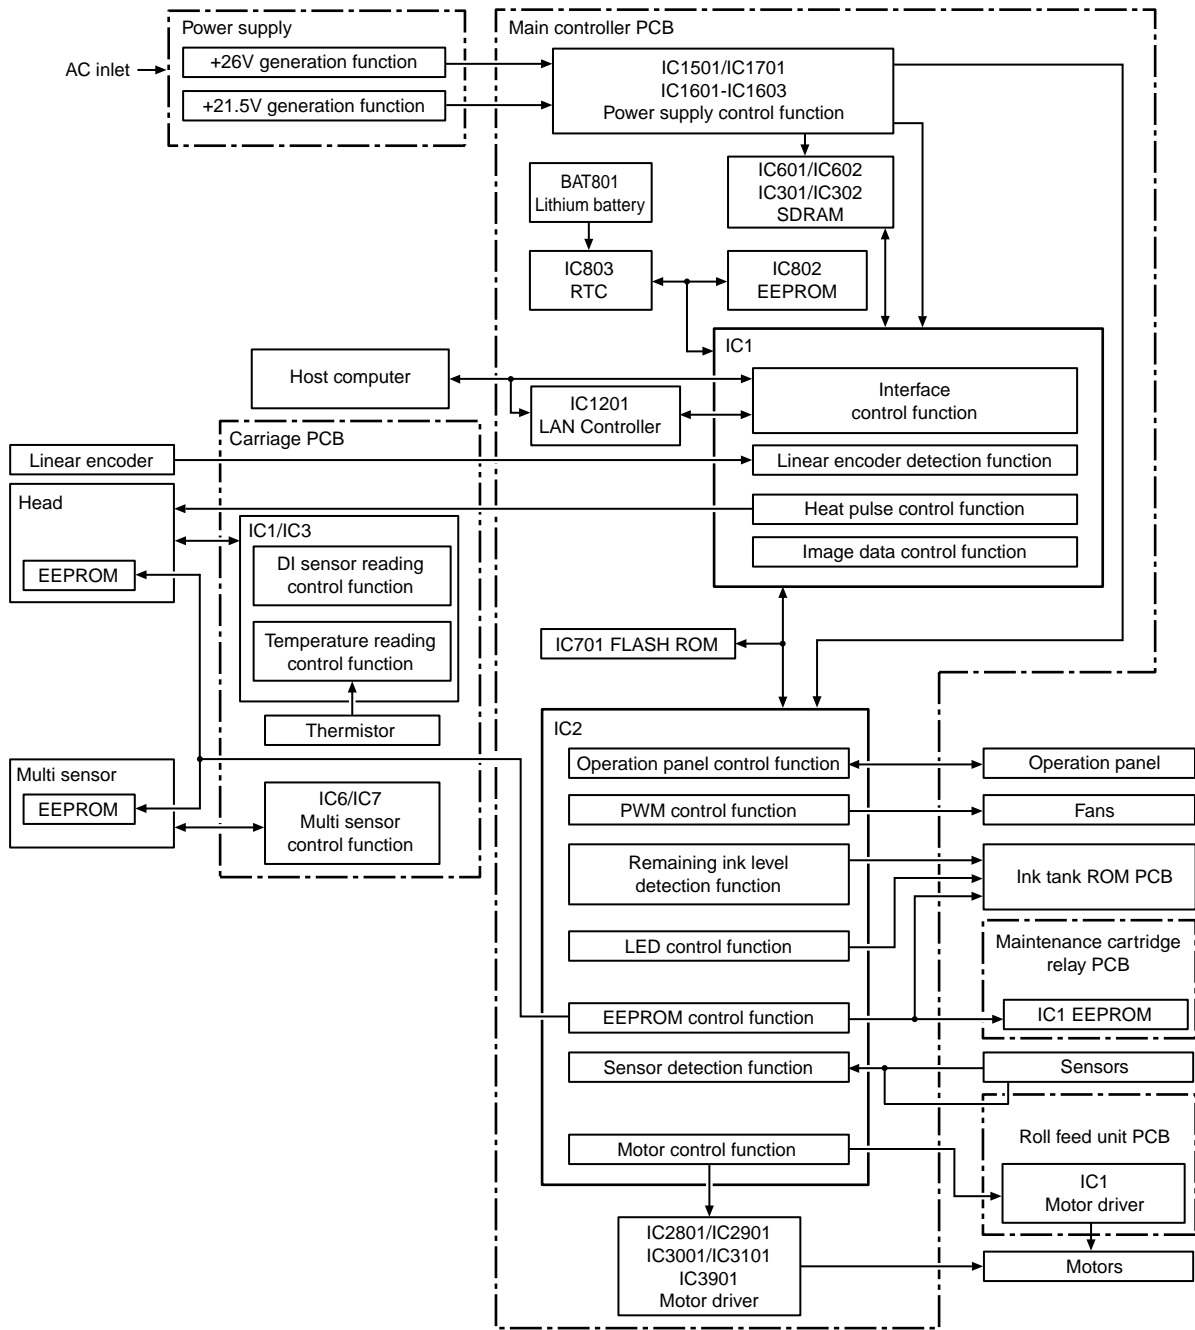

2.4.1.1 Overview

iPF5000 / iPF5100

The printer electrical system consists of the main controller PCB and power supply PCB which are mounted on the left side of the printer, the carriage PCB and print head which are mounted in the carriage, and other electrical components such as the operation panel, sensors, and motors. The main controller PCB manages the image data processing and the entire electrical system, and controls relay PCBs and driver functions.

F-2-53

F-2-54

2.4.2 Main Controller

2.4.2.1 Main controller components

iPF5100

F-2-55

a) ASIC (IC1/IC2)

The ASIC with a 16-bit internal bus is driven in sync with the 66 MHz external clock. It supports the following functions:

Image processing unit

This unit converts the RGB multi-value image data or CMYK multi-value data received from the host computer through the interface connector to the binary image data for the ink colors used.

DMA controller

This controller control DMA transfer of the data transferred through the input interfaces such as the USB and expansion card slot as well as DMA transfer of the data stored in the DIMM.

Image data generation/output function

This function generates image data for color printing from the received image data and the mask pattern (corresponding to print mode) stored in the FLASH ROM, and stored the generated image data in DIMM. It also outputs the generated image data to the carriage PCB.

Interrupt controller

This controller receives and processes internal interrupts and external interrupts from the USB, image processing unit, and expansion card slot.

Timer function

Even when the printer is turned off, the timer function is held on using the RTC(IC803) and lithium battery(BAT801) to assist the cleaning function. When the power cord is plugged to the outlet, power is supplied to the RTC and therefore the lithium battery power is not consumed.

Heat Enable signal control function

This function uses the pulse width to perform variable control of the time of application of the Heat Enable signal to the nozzle heater board for each printhead nozzle array.

Linear scale count function

This function counts the linear scale when the carriage moves, thus generating the ink discharge timing. It also counts the linear scale timing cycle using the reference clock to measure the carriage moving speed.

Dot count function

This function controls the discharge dots used as the information for Heat Enable signal control, maintenance jet control, cleaning control, and remaining ink level for each nozzle array.

Operation panel control function

This function controls serial communication with the operation panel.

PWM control function

This function controls driving of the suction fan and mist fan as well as the temperature of the printhead.

Remaining ink level detection function

This function detects the remaining level of each color of ink based on the signal received from the hollow needle mounted in the ink tank unit.

LED control function

This function controls the LEDs on the ink tank unit.

I/O port function

This function controls input signals from sensors.

Power ON/OFF control function

This function controls turning on/off of the drive power (26 V and 21.5 V) supplied from the power supply PCB.

Head DI sensor read control function

This function controls read operation by the head DI sensor.

Multi sensor control function

This function controls the LED, adjusts the gain, and controls obtainment of the reading for the multi sensor.

EEPROM control function

This function controls the EEPROMs of individual ink tanks, the maintenance cartridge EEPROM, the EEPROM on the maintenance cartridge relay PCB, and the head EEPROM in addition to the on-board EEPROM.

Motor control function

This function controls the carriage motor, feed motor, valve motor, spur motor, pump motor, cassette motor, lift motor, cutter motor and cutter lift motor based on the input signals from sensors.

b) Driver IC (IC3101)

This IC generates a carriage motor control signal based on the control signal from the ASIC.

c) Driver IC (IC2801)

This IC generates feed motor and valve motor control signals based on the control signal from the ASIC.

d) Driver IC (IC2901)

This IC generates pump motor, cutter motor and spur motor control signals based on the control signal from the ASIC.

e) Driver IC (IC3001)

This IC generates a lift motor control signal based on the control signal from the ASIC.

f) Driver IC (IC3901)

This IC generates cutter lift motor and cassette motor control signals based on the control signal from the ASIC.

g) DIMMs (IC301,IC302,IC601,IC602)

The DIMM comprising a 128-MB DDR-SDRAM and a 64-MB SDR-SDRAM is connected to the 32-bit data bus to be used as a work area. During print data reception, it is also used as an image buffer. It cannot be expanded.

h) FLASH ROM (IC701)

A 16-MB flash ROM is connected to the 8-bit data bus to store the printer control program.

i) EEPROM (IC802)

The 128-KB EEPROM stores various setting values, adjustment values, log data, counter values related to the user/servicing.

MEMO:

After replacement of the main controller PCB, the printer must be started up in the service mode to take over the setting and adjustment values to the new PCB properly (the service mode will be switched to the PCB replacement mode automatically).

2.4.2.2 Main controller components

iPF5000

F-2-56

a) ASIC (IC2)

The ASIC with a 16-bit internal bus is driven in sync with the 66 MHz external clock. It supports the following functions:

Image processing unit

This unit converts the RGB multi-value image data or CMYK multi-value data received from the host computer through the interface connector to the binary image data for the ink colors used.

DMA controller

This controller control DMA transfer of the data transferred through the input interfaces such as the USB and expansion card slot as well as DMA transfer of the data stored in the DIMM.

Image data generation/output function

This function generates image data for color printing from the received image data and the mask pattern (corresponding to print mode) stored in the DIMM, and stored the generated image data in another DIMM. It also outputs the generated image data to the carriage PCB.

Interrupt controller

This controller receives and processes internal interrupts and external interrupts from the USB, image processing unit, and expansion card slot.

Timer function

Even when the printer is turned off, the timer function is held on using the RTC and lithium battery to assist the cleaning function.

When the power cord is plugged to the outlet, power is supplied to the RTC and therefore the lithium secondary battery power is not consumed.

Heat Enable signal control function

This function uses the pulse width to perform variable control of the time of application of the Heat Enable signal to the nozzle heater board for each printhead nozzle array.

Linear scale count function

This function reads the linear scale when the carriage moves, thus generating the ink discharge timing. It also counts the linear scale timing cycle using the reference clock to measure the carriage moving speed.

Dot count function

This function controls the discharge dots used as the information for Heat Enable signal control, maintenance jet control, cleaning control, and remaining ink level for each nozzle array.

Operation panel control function

This function controls serial communication with the operation panel.

PWM control function

This function controls driving of the suction fan and mist fan as well as the temperature of the printhead.

Remaining ink level detection function

This function detects the remaining level of each color of ink based on the signal received from the hollow needle mounted in the ink tank unit.

LED control function

This function controls the LEDs on the ink tank unit.

I/O port function

This function controls input signals from sensors.

Power ON/OFF control function

This function controls turning on/off of the drive power (26 V and 21.5 V) supplied from the power supply PCB.

Head DI sensor read control function

This function controls read operation by the head DI sensor.

Multi sensor control function

This function controls the LED, adjusts the gain, and controls obtainment of the reading for the multi sensor.

EEPROM control function

This function controls the EEPROMs of individual ink tanks, the maintenance cartridge EEPROM, the EEPROM on the maintenance cartridge relay PCB, and the head EEPROM in addition to the on-board EEPROM.

Motor control function

This function controls the carriage motor, feed motor, valve motor, spur motor, pump motor, cassette motor, lift motor, cutter motor, and roll motor based on the input signals from sensors.

b) Driver IC (IC3101)

This IC generates a carriage motor control signal based on the control signal from the ASIC.

c) Driver IC (IC2801)

This IC generates feed motor, valve motor, and spur motor control signals based on the control signal from the ASIC.

d) Driver IC (IC2901)

This IC generates pump motor and cassette motor control signals based on the control signal from the ASIC.

e) Driver IC (IC3001)

This IC generates a lift motor control signal based on the control signal from the ASIC.

f) Regulator IC (IC3301)

This IC generates the 3.3 V to be supplied to the tank ROM board.

g) DIMMs (IC301,IC302,IC601,IC602)

The DIMM comprising a 128-MB DDR-SDRAM and a 64-MB SDR-SDRAM is connected to the 32-bit data bus to be used as a work area.

During print data reception, it is also used as an image buffer.

It cannot be expanded.

h) FLASH ROM (IC701)

A 64-MB flash ROM is connected to the 8-bit data bus to store the printer control program.

i) EEPROM (IC802)

The 128-KB EEPROM stores various setting values, adjustment values, log data, counter values related to the user/servicing.

MEMO:

After replacement of the main controller PCB, the printer must be started up in the service mode to take over the setting and adjustment values to the new PCB properly (the service mode will be switched to the PCB replacement mode automatically).

2.4.3 Carriage Relay PCB

2.4.3.1 Carriage PCB components

iPF5000 / iPF5100

a) Latch ICs (IC1 and IC3)

DI sensor reading control function

This function obtains the DI sensor value in the printhead and head rank for each color and sends it to the main controller PCB based on the control signals from the main controller.

Environmental temperature reading control

This function sends the environmental temperature detected by the thermistor on the board based on the control signals from the main controller PCB based on the control signals from the main controller PCB.

Image data relay function

This function relays the image data from the main controller PCB to the printhead. The function for processing image data is not supported.

b) Multi sensor control ICs (IC6 and IC7)

These ICs are used to generate the multi sensor LED control signal and adjust the gain.

2.4.4 Motor Driver

2.4.4.1 Cutter driver PCB components

iPF5000

a) Driver IC (IC1)

Cutter motor drive function

This function controls the cutter motor based on the control signals from the main controller.

Sensor relay function

This function relays the input signals from the cutter lift sensor, cutter HP sensor, and cutter right position sensor to the main controller PCB.

2.4.4.2 Roll feed unit PCB components

iPF5000 / iPF5100

a) Driver IC (IC1)

Roll motor drive function

This function controls the roll motor based on the control signals from the main controller.

Sensor relay function

This function relays the input signals from the roll cam sensor and roll media sensor to the main controller PCB.

2.4.5 Maintenance Cartridge Relay PCB

2.4.5.1 Maintenance cartridge relay PCB components

iPF5000 / iPF5100

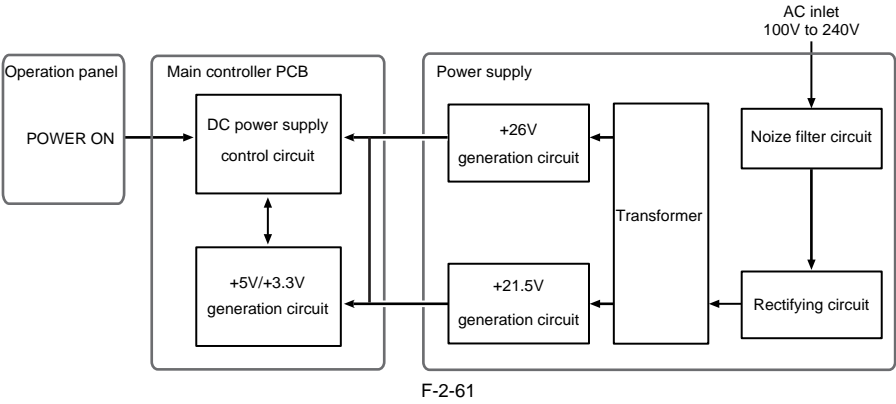

a) EEPROM (IC1)

The 128-KB EEPROM stores all information written to the EEPROM on the main controller PCB.

2.4.6 Power Supply

2.4.6.1 Power supply block diagram

iPF5000 / iPF5100

The power supply converts AC voltages ranging from 100 V to 240 V from the AC inlet to DC voltages for driving the ICs, motor, and others. The voltage generator circuits include the +26 V generation circuit for driving motors, fans, and sensors and a +21.5 V generator circuit for driving sensors, heads, logic circuits, and others. When the power is turned off, +26 V and +21.5 V are reduced to about 12 V and 9 V respectively (power save mode). Power ON/OFF operation is controlled by the main controller PCB.

2.5 Detection Functions with Sensors

2.5.1 Sensors for covers

iPF5000 / iPF5100

F-2-62

Top cover sensor

The photo-interrupter-type top cover sensors detect opening and closing of the top cover.

When the top cover is closed, the sensor light is shielded by the sensor arm, thus notifying the sensor of closing the cover.

Ink tank cover switch

The micro-switch-type ink tank cover switch detects opening and closing of the ink tank cover.

When the ink tank cover is closed, the protrusion on the ink tank cover presses the switch, thus detecting closing of the ink tank cover.

2.5.2 Ink passage system

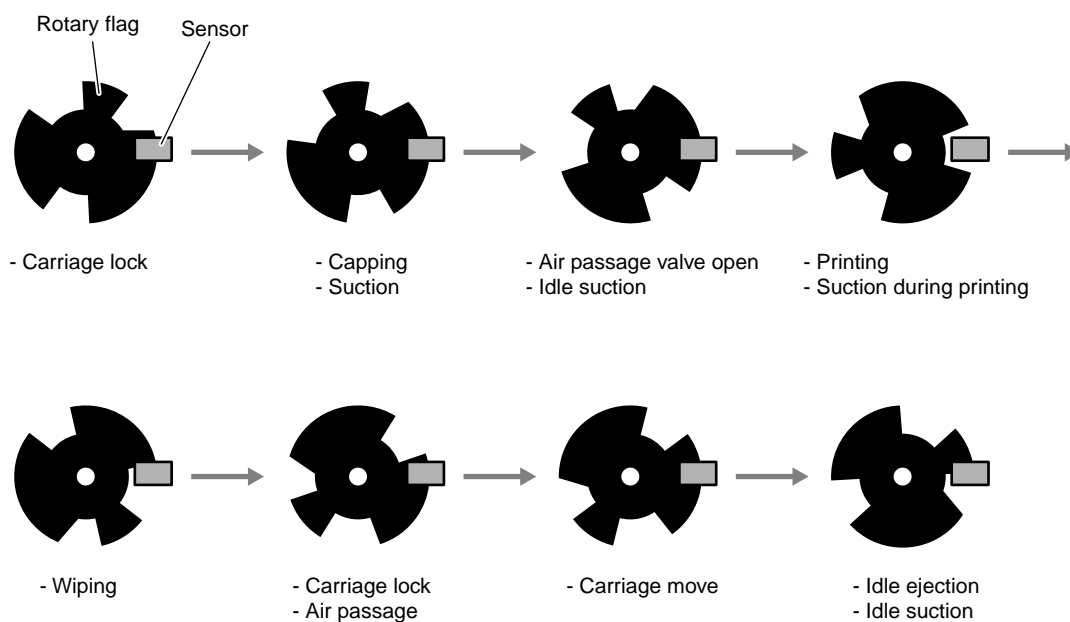

iPF5000 / iPF5100

F-2-63

Pump cam sensor

The photo-interrupter-type pump cam sensor detects that the sensor light is shielded or unshielded by the rotary cam. The sensor detects the purge unit capping and wiping states with the combination of the state detected by the pump cam and the state of pump motor rotation control performed by the pump encoder.

F-2-64

Pump encoder sensor

The pump encoder is a photo-interruptive type sensor. It reads the slits on the pump motor's encoder film to control the amount of pump motor rotation.

**Valve open/closed detection sensor**

The photo-interrupter-type valve open/closed detection sensor detects the valve cam state.

When the link that operates in conjunction with the valve cam shields light, this sensor detects that the ink supply valve has been opened.

Ink detection sensor

Presence or absence of ink in the ink tank is detected according to whether the two hollow needles are electrically connected.

When the ink level in the ink tank lowers below the wall around the hollow needle at the air passage, this hollow needle is electrically disconnected from the hollow needle located on the ink supply side, thus detecting that the printer has run out of ink.

**Head management sensor**

The photo-transmission-type sensor detects that the printhead is discharging ink.

The carriage moves to and stops at the detection positions for individual nozzle arrays. When the carriage is at a stop, nozzles discharge ink one after another. The sensor detects each nozzle due to the voltage change caused when ink discharged from the nozzle blocks the sensor light.

Non-discharging nozzle detection is carried out at the following timings:

- After the execution of Cleaning 1, Cleaning 2, Cleaning 3, Cleaning 6 or Cleaning 10
- After the number of copies that has been set by the user menu choice Nozzle Check Frequency have been printed

If more than a specified number of non-discharging nozzles have been located in one session of non-discharging nozzle detection, the normal cleaning sequence is launched before a second session of non-discharging nozzle detection is conducted. If more than a specified number of non-discharging nozzles are located in the second session of non-discharging nozzle detection, the normal (High) cleaning session is launched before a third session of non-discharging nozzle detection is conducted.

If 30 or more non-discharging nozzles and less than 100 non-discharging nozzles per train are located as a result of the third session of non-discharging nozzle detection, the print operation can resume after the message display as needed. If 100 or more non-discharging nozzles are located, a head replacement prompt message is displayed.

2.5.3 Carriage system

iPF5000

Multi sensor

The photo-reflection-type multi sensor is composed of four LEDs (red, blue, green and infrared) and two light-sensitive sensors. It detects the leading edge, skewing, and width of media and is used for adjustment of the registration, and head height. During head adjustment, the light reflected by the infrared LED is detected by two light-sensitive sensors to calculate the head height from the difference between the measurements.

Linear encoder

When the carriage moves, the linear encoder located at the rear of the carriage reads the slits on the linear encoder to detect the carriage position.

Lift cam sensor

This is a photo-interrupter-type sensor. The lift motor is driven by a predetermined number of pulses received after blocking of the sensor light by the flag, thus controlling the heights of the head and platen.

Environmental temperature sensor

The environmental temperature sensor installed on the carriage PCB detects the temperature around the carriage. The resistance of the thermistor that changes with the temperature inside the printer is reported to the main controller via the carriage PCB. The environmental temperature is used to calibrate the head sensor and to detect abnormal head temperatures.

Head temperature sensor

The diode-type head temperature sensors installed at the top and bottom of the printhead nozzle unit are used to detect the head temperature.

The diode voltage that changes with the nozzle unit temperature is reported to the main controller via the carriage PCB. The detected head temperature is used to control the head operation and to detect abnormal head temperatures.

Printhead contact detection

The printhead contact status is detected by testing the electrical conductivity. It is detected according to the voltage changes at the two terminals of the contact faces, power supply terminals, and GND terminal.

2.5.4 Carriage system

iPF5100

Multi sensor

The photo-reflection-type multi sensor is composed of four LEDs (red, blue, green and infrared) and two light-sensitive sensors. It detects the leading edge, skewing, and width of media and is used for adjustment of the registration, head height, and color calibration.

During head adjustment, the light reflected by the infrared LED and green LED is detected by two light-sensitive sensors to calculate the head height from the difference between the measurements.

When color calibration is executed, a color chart printed is read with three-color LED (red, blue, green), so color correction is implemented on the basis of the readings.

Ink mist adhering to the sensor could deliver incorrect measurement readings when color calibration is executed. If the ink dot count exceeds a tolerance, the service error (E194-4034) would occur. If it does, execute service mode: SERVICE MODE > ADJUST > GAP CALIB. after the multisensor has been replaced to clear the dot count.

- Service mode: After SERVICE MODE > ADJUST > GAP CALIB. has been carried out, pass paper to make sure that it is detected properly.
- In executing Calibration concurrently with the main menu choice Auto Head Adj. or Manual Head Adj., Auto Head Adj. or Manual Head Adj. first for the sake

of higher color calibration accuracy.

Linear encoder sensor

When the carriage moves, the linear encoder sensor located at the rear of the carriage reads the slits on the linear encoder to detect the carriage position.

Lift cam sensor

This is a photo-interrupter-type sensor. The lift motor is driven by a predetermined number of pulses received after blocking of the sensor light by the flag, thus controlling the heights of the head and platen.

Environmental temperature sensor

The environmental temperature sensor installed on the carriage PCB detects the temperature around the carriage.

The resistance of the thermistor that changes with the temperature inside the printer is reported to the main controller via the carriage PCB.

The environmental temperature is used to calibrate the head sensor and to detect abnormal head temperatures.

Head temperature sensor

The diode-type head temperature sensors installed at the top and bottom of the printhead nozzle unit are used to detect the head temperature.

The diode voltage that changes with the nozzle unit temperature is reported to the main controller via the carriage PCB.

The detected head temperature is used to control the head operation and to detect abnormal head temperatures.

Printhead contact detection

The printhead contact status is detected by testing the electrical conductivity.

It is detected according to the voltage changes at the two terminals of the contact faces, power supply terminals, and GND terminal.

2.5.5 Paper path system

iPF5000 / iPF5100

F-2-72

Cassette pick-up sensor

This is a photo-interrupter-type sensor. When paper supplied from the cassette, the sensor light is blocked by the sensor arm, thus detecting paper.

Cassette cam sensor

This is a photo-interrupter-type sensor. When the cassette cam rotates to block the sensor light, lowering of the pressure plate of the cassette is detected.

Cassette encoder sensor

The cassette encoder sensor detects the slits on the encoder film during cassette motor rotation, thus detecting the amount of rotation of the roller.

Paper detection sensor

This is a photo-interrupter-type sensor. When paper is supplied from the cassette, paper tray, or auto roll feed unit, the sensor light is blocked by the sensor arm, thus detecting paper.

Spur cam sensor

This is a photo-interrupter-type sensor.

When the sensor light is shielded by the rotation of the spur motor, the printer detects that the spur unit is at the upper-limit position.

When the sensor light is unshielded by the rotation of the spur motor, the printer detects that the spur unit is at the bottom position.

The spur height is controlled by driving the spur motor with a predetermined number of pulses.

Cutter lift sensor

This is a photo-interrupter-type sensor. When the cutter unit ascends, the sensor unit blocks the sensor light, thus detecting that the cutter unit is at the upper-limit position (escaped).

Cutter HP sensor

This is a photo-interrupter-type sensor. This sensor detects that the cutter is at the home position (left end).

Cutter right position sensor

This is a photo-interrupter-type sensor. This sensor detects that the cutter is at the right end.

F-2-73

Cassette detection sensor

This is a photo-interrupter-type sensor. When the cassette is installed, the protrusion at the back of the cassette blocks the sensor light to detect the cassette.

Cassette paper detection sensor

This is a photo-interrupter-type sensor. When media is loaded in the cassette, the sensor arm blocks the sensor light, thus detecting the media.

Feed roller HP sensor

The feed roller HP sensor detects the change from the white portion (unshielded sensor light) to black portion (shielded sensor light) of the encoder film on the feed roller, thus setting the home position for feed roller eccentricity compensation.

Feed roller encoder sensor

The feed roller encoder sensor detects the slits on the encoder film of the feed roller during feed motor rotation, thus detecting the amount of rotation of the feed roller (media feed amount).

F-2-74

Roll media sensor

This is a photo-interrupter-type sensor. When media is loaded, the the sensor arm blocks the sensor light, thus detecting the media.

Roll cam sensor

This is a photo-interrupter-type sensor. When the roll cam blocks the sensor light, lowering of the transport roller (contact with the roller) is detected.

2.5.6 Others

iPF5000 / iPF5100

F-2-75

Temperature/humidity sensor

This sensor detects the temperature and humidity around the printer so that the measured values are used for head height adjustment, idle discharge control, waste ink evaporation amount calculation, and suction fan control.

Chapter 3 INSTALLATION

3.2.2.1 Reinstalling the Printer.....	3-43

3.1 Installation

3.1.1 Making Pre-Checks

3.1.1.1 Making Pre-Checks

iPF5000

Carry out the installation work with reference to the "Quick Start Guide" supplied with the printer.

Package dimensions and weight are as follows.

Main body (with a palette): 1140(W) mm x 874(D) mm x 628(H) mm, Approx. 65 kg

F-3-1

Installation space

Main body only: 1299(W) mm x 1833(D) mm x 638(H) mm

Main body with an auto roll feed unit: 1299(W) mm x 1910(D) mm x 644(H) mm

3.1.1.2 Making Pre-Checks

iPF5100

Carry out the installation work with reference to the "Quick Start Guide" supplied with the printer.

Package dimensions and weight are as follows.

Main body (with a palette): 1140 (W) mm x 914 (D) mm x 675 (H) mm, Approx. 75 kg

F-3-2

Installation space

Main body only: 1299 (W) mm x 1910 (D) mm x 644 (H) mm

When printing from the Front Paper Feed Slot, leave at least 1,300 mm (51.2 in) of unobstructed space in front of the printer and 700 mm (27.6 in) behind it.

3.1.2 Unpacking and Installation

3.1.2.1 Unpacking and Installation

iPF5000

The printer must be moved with it held by two or more persons on both sides. Be careful not to get your lower back and other regions hurt.

F-3-3

When moving the printer, grasp the carrying handles [1] on the left and right side of the bottom. Holding other portions can drop the printer and you may be injured.

F-3-4

(1) Check to see that none of the accessories is missing.

F-3-5

T-3-1

- | | |
|---------------------------------|-----------------------|
| [1] Main body | [7] Power Cord |
| [2] Paper Tray Unit | [8] Printhead |
| [3] Auto Roll Feed Unit(option) | [9] Ink Tank |
| [4] Roll Holder Set(option) | [10] Cleaning Brush |
| [5] Output Tray | [11] Reference guides |
| [6] Cassette | [12] CD-ROM |

(2) Take out the printer and accessories from the shipping box and remove cushioning materials.

First remove the cushioning materials at top of the printer. Next, remove the cushioning materials by raising the left and right sides of the printer one after another with your hand inserted in the clearance as indicated in the figure[1].

F-3-6

- (3) Grasping the carrying handles[1] on the left and right side of the bottom, place the printer on a level place such as a table.

F-3-7

- (4) Remove all cushioning materials and tape from the printer and accessories.

F-3-8

- (5) Install the IEEE1394 Board(option).

- (6) Open the top cover, raise the carriage shaft belt stopper[1], and then pull it forward to remove. (Keep the removed belt stopper for future transportation of the printer.)

F-3-9

- (7) Connect the power cord to the power connector located at the back of the printer.

F-3-10

- (8) Connect the power cord to the outlet.

F-3-11

- (9) Set the printhead.
Press the Power button to power on the printer.

F-3-12

- (10) When the message "Open Top Cover" is displayed, open the top cover.

F-3-13

- (11) Pull the printhead fixer lever forward to open it fully.

F-3-14

- (12) Raise the printhead fixer cover to open it fully.

F-3-15

(13) Holding the knobs[1], take out the printhead from the case.

F-3-16

- Do not touch the nozzles[2] and contacts[3] on the printhead[1]. The printhead can damage or a printing failure can occur. Do not reattach the removed protective caps.
- Dispose of these parts following the local regulation.

F-3-17

(14) Remove the orange protective cap 1[1], and then pull the protective cap 2[2] downward with the knob pressed.

F-3-18

(15) Insert the print head in the carriage with the nozzles down and the contacts in the back. Insert it as far as it will go while taking care that the nozzles and contacts do not touch the carriage.

F-3-19

(16) Turn the printhead fixer cover forward to lock the printhead.

F-3-20

(17) Turn the printhead fixer lever backward until it clicks.

F-3-21

(18) Repeat steps (11) to (17) to install the printhead of the second piece.

(19) Close the top cover.

F-3-22

(20) Open the ink tank cover according to the message shown on the display.

F-3-23

(21) Press the stopper at the top of the ink tank lock lever, and then open the ink tank lock lever upward.

F-3-24

(22) Before unpacking the ink tank you want to install, shake it slowly 7-8 times.

F-3-25

(23) Open the package and take out the ink tank by holding its knobs.

F-3-26

- Never touch the ink port[1] and contacts[2]. The peripheral parts may be stained, the ink tank may be broken, or a printing failure may occur.

F-3-27

- Be careful not to drop the ink tank once it is unpacked. The leaked ink may stain the peripheral area.
- Do not remove and shake the ink once it is installed. Ink may spatter.

(24) Install the ink tank in the holder with the ink port facing down as shown.

F-3-28

(25) close the ink tank lock lever until it clicks.

F-3-29

(26) Check that the Ink lamp is light in red.

F-3-30

(27) Repeat steps(21)to(25)to install all ink tanks.

(28) Close the ink tank cover.

F-3-31

(29) When the printhead and all ink tanks have been installed, the message "Do Not Open Cover" appears on the display and initial ink filling requires about 10 minutes.

MEMO:

- Initial ink filling performed at printer installation consumes ink between the ink tanks and printhead.
- "80%" may be displayed as the remaining ink level immediately after initial ink filling. This is not a failure.

3.1.2.2 Unpacking and Installation

iPF5100

The printer must be moved with it held by three or more persons on both sides. Be careful not to get your lower back and other regions hurt.

F-3-32

When moving the printer, grasp the carrying handles [1] on the left and right side of the bottom. Holding other portions can drop the printer and you may be injured.

F-3-33

(1) Check to see that none of the accessories is missing.

F-3-34

- [1] Printer
- [2] Auto Roll Feed Unit (option)
- [3] Output Tray
- [4] Cleaning sheet
- [5] Roll Holder Set (option)
- [6] Cassette
- [7] Sample paper
- [8] Power Cord
- [9] Printhead
- [10] Starter ink tanks
- [11] Cleaning brush
- [12] Reference Guides
- [13] CD-ROM

(2) Take out the printer and accessories from the shipping box and remove cushioning materials. First remove the cushioning materials at top of the printer. Next, remove the cushioning materials by raising the left and right sides of the printer one after another with your hand inserted in the clearance as indicated in the figure [1].

F-3-35

(3) Grasping the carrying handles [1] on the left and right side of the bottom, place the printer on a level place such as a table.

F-3-36

(4) The Roll Feed Unit [1] is preinstalled on the printer. Peel away the tape and remove the Roll Holder [2] and protective material from the Roll Feed Unit. Also remove the tape on the two Holder Stoppers [3] attached to the Roll Holder, and then remove the Holder Stoppers from the Roll Holder.

F-3-37

(5) Remove all cushioning materials and tape from the printer and accessories.

F-3-38

(6) Open the top cover, raise the carriage shaft belt stopper [1], and then pull it forward to remove.

F-3-39

MEMO:

- You will need the Belt Stopper if you move the printer to another location. Do not discard the Belt Stopper you have removed.
- When you open the Top Cover, you will find a Cleaning Brush [3] on the right side. Use this brush to clean inside the Top Cover.

(7) Plug the power cord into the Power Socket on the back of the printer.

F-3-40

(8) Connect the power cord to the outlet.

F-3-41

(9) Set the printhead.

Press the Power button to power on the printer.

F-3-42

(10) When the message "Open Top Cover" is displayed, open the top cover.

F-3-43

(11) Pull the printhead fixer lever forward to open it fully.

F-3-44

(12) Raise the printhead fixer cover to open it fully.

F-3-45

(13) Holding the knobs[1], take out the printhead from the case.

F-3-46

- When handling the Printhead, always hold it by the grips [1].
- Never touch the printhead nozzles [2] or the metal contacts [3]. The printhead can damage or a printing failure can occur. Do not reattach the removed protective caps.
- Dispose of these parts following the local regulation.

F-3-47

(14) Remove the orange protective cap 1 [1], and then pull the protective cap 2 [2] downward with the knob pressed.

F-3-48

(15) Insert the print head in the carriage with the nozzles down and the contacts in the back. Insert it as far as it will go while taking care that the nozzles and contacts do not touch the carriage.

F-3-49

(16) Turn the printhead fixer cover forward to lock the printhead.

F-3-50

(17) Turn the printhead fixer lever backward until it clicks.

F-3-51

(18) Repeat steps (11) to (17) to install Printhead of piece second.

(19) Close the top cover.

F-3-52

(20) Open the ink tank cover according to the message shown on the display.

F-3-53

(21) Press the stopper at the top of the ink tank lock lever, and then open the ink tank lock lever upward.

F-3-54

(22) Before unpacking the ink tank you want to install, shake it slowly 7-8 times.

F-3-55

(23) Open the package and take out the ink tank by holding its knobs.

F-3-56

- Never touch the ink port [1] and contacts [2]. The peripheral parts may be stained, the ink tank may be broken, or a printing failure may occur.

F-3-57

- Be careful not to drop the ink tank once it is unpacked. The leaked ink may stain the peripheral area.
- Do not remove and shake the ink once it is installed. Ink may spatter.

(24) Install the ink tank in the holder with the ink port facing down as shown.

F-3-58

(25) Close the ink tank lock lever until it clicks. Check that the Ink lamp is light in red.

F-3-59

(26) Repeat steps (21) to (25) to install all ink tanks.

(27) Close the ink tank cover.

F-3-60

(28) When the printhead and all ink tanks have been installed, the message "Do Not Open Cover" appears on the display and initial ink filling requires about 14 minutes.

MEMO:

- Initial ink filling performed at printer installation consumes ink between the ink tanks and printhead.
 - "80%" may be displayed as the remaining ink level immediately after initial ink filling. This is not a failure.
-

3.1.2.3 Installing the Stand

iPF5000

Stand assembly requires two or more people.

a. Package Contents

- | | |
|--|--------------------------------|
| [1] Stand L | [12] Basket Cloth |
| [2] Stand R | [13] Basket Rod #2 |
| [3] Stand Stay | [14] Basket Rod Caps (2pcs.) |
| [4] Table Stay | [15] Basket Wire #2 |
| [5] Table Stay Bolt | [16] Basket Band, preinstalled |
| [6] Table Bolts (2pcs.) | [17] Basket Wire #1 |
| [7] Printer Securing Bolts (4pcs.) | [18] Stand Bolts (8pcs.) |
| [8] Accessory Box | [19] Wrench |
| [9] Velcro Tape | [20] Allen Wrench |
| [10] Basket Table | [21] L-Shaped Allen Wrench |
| [11] Basket Rod #1 (2pcs.), preinstalled | |

b. Assembling the Stand

(1) Position the Stand L [1] and Stand R [2] so that the "L" and "R" marks are on the outside toward the front.

(2) Holding the Stand Stay [1] with the rear side (identified by an "R" sticker) facing back, insert it fully into the grooves of the Stand L [2] and Stand R [3] until it stops.

F-3-63

(3) Use the Wrench [1] to tighten the hex screws on both sides and secure the Stand Stay [2].

F-3-64

(4) Hook the Table Stay [1] on the Stand Stay [2] and tighten the Table Stay Bolt [4] with the Allen Wrench [3].

F-3-65

c. Assembling the Output Stacker

(1) With the holes of Basket Table [1] and the Table Stay [2] aligned, set the Basket Table [1] on the Stand.

F-3-66

Be careful to avoid pinching your fingers between the Basket Table and Stand.

(2) Use the L-Shaped Allen Wrench [1] to tighten the eight Stand Bolts [2] and secure the Basket Table [3] to the Stand. Tighten the Stand Bolts [2] in the order indicated; first at position A, and then at position B.

F-3-67

(3) Use the Allen Wrench [2] to tighten the Table Bolts [3] and secure the Basket Table [1] to the Stand and Table Stay [4].

F-3-68

(4) Rotate the Basket Rods #1 [1] on both sides all the way toward the front A and then return them to the position at which they lock into place B.

F-3-69

(5) Insert Basket Wire #1 [1] into the hole on the side of the Basket Cloth [2] without the Velcro Tape. Keeping the Velcro Tape side face-down, insert both basket wires into the holes on both sides of the Basket Table [3].

F-3-70

(6) Insert Basket Rod #2 [2] in the Basket Cloth [1].

F-3-71

(7) Insert Basket Rod Caps [1] on both ends of Basket Rod #2 [2] until the guide lines [3] are no longer visible.

F-3-72

(8) Insert the Basket Rod Caps [1] onto the left and right Basket Rods #1 [2] until the guide lines [3] are no longer visible.

F-3-73

(9) With Basket Wire #2 [1] positioned so that the bend faces forward, insert it in the hole of the Basket Table [2] from below.

F-3-74

(10) Fold the Basket Band [1] in two and secure it with the Velcro Tape A. Push Basket Wire #2 [2] toward the back B.

F-3-75

d. Installing the Printer

- Moving the printer requires at least two people, one on either side. Be careful to avoid back strain and other injuries.

F-3-76

- When moving the printer, firmly grasp the Carrying handles under each side. Holding the printer at other positions is dangerous and poses a risk of injury and damage if the printer is dropped.

F-3-77

- Be sure to remove the Cassette and Output Tray before installing the printer. Grasp the handle on the front of the Cassette and pull it forward a little. Holding the Cassette on both sides with both hands, remove the Cassette. Holding the Output Tray on both sides by the far end, press the button to release the lock, and then remove the Tray.

F-3-78

- If a roll is loaded, be sure to remove the roll before this procedure. Remove the Roll Holder from the Auto Roll Feed Unit. Fasten a paper band or the like around the paper to prevent the roll from unwinding.

F-3-79

(1) Move the Stand into position and lock the front casters.

F-3-80

(2) While holding the Carrying handles on both sides, align ▼ on the back of the printer with ▲ of the Output Stacker as you set the printer down on the Stand.

F-3-81

(3) Secure the printer to the stand by firmly tightening the two Printer Securing Bolts [2] on both sides with the Allen Wrench [1] from under the Output Stacker (four bolts in all).

F-3-82

(4) Hold the Output Tray on both sides by the near end. Aligning the Output Tray with the guides, insert it into the printer until it locks in place.

F-3-83

(5) Holding the Cassette on both sides with both hands, insert it firmly into the printer.

F-3-84

(6) Assemble the Accessory Box [1] and attach it to the Stand with Velcro Tape [2].

F-3-85

3.1.2.4 Installing the Stand

iPF5100

Stand assembly requires two or more people.

a. Package Contents

F-3-86

[1] Stand L
[2] Stand R

- [3] Stand Stay
- [4] Table Stay
- [5] Table Stay Bolt
- [6] Table Bolts (2pcs.)
- [7] Printer Securing Bolts (4pcs.)
- [8] Accessory Box
- [9] Velcro Tape
- [10] Basket Table
- [11] Basket Rod #1 (2pcs.), preinstalled
- [12] Basket Cloth
- [13] Basket Rod #2
- [14] Basket Rod Caps (2pcs.)
- [15] Basket Wire #2
- [16] Basket Band, preinstalled
- [17] Basket Wire #1
- [18] Stand Bolts (8pcs.)
- [19] Wrench
- [20] Allen Wrench
- [21] L-Shaped Allen Wrench

b. Assembling the Stand

(1) Position the Stand L [1] and Stand R [2] so that the "L" and "R" marks are on the outside toward the front.

F-3-87

(2) Holding the Stand Stay [1] with the rear side (identified by an "R" sticker) facing back, insert it fully into the grooves of the Stand L [2] and Stand R [3] until it stops.

F-3-88

(3) Use the Wrench [1] to tighten the hex screws on both sides and secure the Stand Stay [2].

F-3-89

(4) Hook the Table Stay [1] on the Stand Stay [2] and tighten the Table Stay Bolt [4] with the Allen Wrench [3].

F-3-90

c. Assembling the Output Stacker

(1) With the holes of Basket Table [1] and the Table Stay [2] aligned, set the Basket Table [1] on the Stand.

F-3-91

Be careful to avoid pinching your fingers between the Basket Table and Stand.

(2) Use the L-Shaped Allen Wrench [1] to tighten the eight Stand Bolts [2] and secure the Basket Table [3] to the Stand. Tighten the Stand Bolts [2] in the order indicated; first at position A, and then at position B.

F-3-92

(3) Use the Allen Wrench [2] to tighten the Table Bolts [3] and secure the Basket Table [1] to the Stand and Table Stay [4].

F-3-93

(4) Rotate the Basket Rods #1 [1] on both sides all the way toward the front A and then return them to the position at which they lock into place B.

F-3-94

(5) Insert Basket Wire #1 [1] into the hole on the side of the Basket Cloth [2] without the Velcro Tape. Keeping the Velcro Tape side face-down, insert both basket wires into the holes on both sides of the Basket Table [3].

F-3-95

(6) Insert Basket Rod #2 [2] in the Basket Cloth [1].

F-3-96

(7) Insert Basket Rod Caps [1] on both ends of Basket Rod #2 [2] until the guide lines [3] are no longer visible.

F-3-97

(8) Insert the Basket Rod Caps [1] onto the left and right Basket Rods #1 [2] until the guide lines [3] are no longer visible.

F-3-98

(9) With Basket Wire #2 [1] positioned so that the bend faces forward, insert it in the hole of the Basket Table [2] from below.

F-3-99

(10) Fold the Basket Band [1] in two and secure it with the Velcro Tape A. Push Basket Wire #2 [2] toward the back B.

F-3-100

d. Installing the Printer

- Moving the printer requires at least three people, one on either side. Be careful to avoid back strain and other injuries.

F-3-101

- When moving the printer, grasp the carrying handles [1] on the left and right side of the bottom. Holding other portions can drop the printer and you may be injured.

F-3-102

- Be sure to remove the Cassette and Output Tray before installing the printer. Grasp the handle on the front of the Cassette and pull it forward a little. Holding the Cassette on both sides with both hands, remove the Cassette. Holding the Output Tray on both sides by the far end, press the button to release the lock, and then remove the Tray.

F-3-103

- If a roll is loaded, be sure to remove the roll before this procedure. Remove the Roll Holder from the Auto Roll Feed Unit. Fasten a paper band or the like around the paper to prevent the roll from unwinding.

F-3-104

- (1) Move the Stand into position and lock the front casters.

F-3-105

- (2) While holding the Carrying handles on both sides, align ▼ on the back of the printer with ▲ of the Output Stacker as you set the printer down on the Stand.

F-3-106

- (3) Secure the printer to the stand by firmly tightening the two Printer Securing Bolts [2] on both sides with the Allen Wrench [1] from under the Output Stacker (four bolts in all).

F-3-107

- (4) Hold the Output Tray on both sides by the near end. Aligning the Output Tray with the guides, insert it into the printer until it locks in place.

F-3-108

(5) Holding the Cassette on both sides with both hands, insert it firmly into the printer.

F-3-109

(6) Assemble the Accessory Box [1] and attach it to the Stand with Velcro Tape [2].

F-3-110

3.1.2.5 Installing the Desktop Basket

iPF5000

a. Package Contents

F-3-111
T-3-3

- | | |
|---|-------------------------------|
| [1] Basket Table | [6] Basket Rod Caps (2pcs.) |
| [2] Basket Rod #1 (2pcs.), preinstalled | [7] Basket Wire #2 |
| [3] Printer Securing Bolts (2pcs.) | [8] Basket Band, preinstalled |
| [4] Basket Cloth | [9] Basket Wire #1 |
| [5] Basket Rod #2 | [10] Allen Wrench |

b. Assembling the Desktop Basket

- Moving the printer requires at least two people, one on either side. Be careful to avoid back strain and other injuries.

F-3-112

- When moving the printer, firmly grasp the Carrying handles under each side. Holding the printer at other positions is dangerous and poses a risk of injury and damage if the printer is dropped.

F-3-113

- Be sure to remove the Cassette and Output Tray before installing the printer. Grasp the handle on the front of the Cassette and pull it forward a little. Holding the Cassette on both sides with both hands, remove the Cassette. Holding the Output Tray on both sides by the far end, press the button to release the lock, and then remove the Tray.

F-3-114

- If a roll is loaded, be sure to remove the roll before this procedure. Remove the Roll Holder from the Auto Roll Feed Unit. Fasten a paper band or the like around the paper to prevent the roll from unwinding.

F-3-115

(1) Put the Basket Table [1] on a desk or other flat surface and push it against the desk to eliminate any space between the side of the Basket Table [2] and the edge of the desk.

F-3-116

(2) Assemble the Output Stacker, referring to steps (4)-(10) in "Installing the Stand" > "Assembling the Output Stacker".

F-3-117

(3) Holding the printer on both sides by the Carrying handles, set it on top of the black parts [2] of the Basket Table [1]. Slide the printer gently back to load it into the Basket Table. Align the printer with the diagonal line [3] on the left side of the black part [2].

F-3-118

Be careful to avoid pinching your fingers between the Basket Table and Stand.

(4) With the printer resting on the Basket Table [1], slide the Basket Table to the right. Align the side [3] of the Basket Table [1] with the edge of the desk so that the holes [2] are visible.

F-3-119

(5) Insert the Main Unit Securing Bolt [1] in the hole [3] of the Basket Table [2] from below and tighten it with the Allen Wrench [4] to secure the printer.

F-3-120

(6) Repeat steps (4) and (5) to secure the printer to the Basket Table on the left side the same way.

F-3-121

(7) Return the Basket Table [1] to the original position and push it against the desk to eliminate any space between its side [2] and the edge of the desk.

F-3-122

(8) Hold the Output Tray on both sides by the near end. Aligning the Output Tray with the guides, insert it into the printer until it locks in place.

F-3-123

(9) Holding the Cassette on both sides with both hands, insert it firmly into the printer.

F-3-124

3.1.2.6 Installing the Desktop Basket

iPF5100

a. Package Contents

F-3-125

- [1] Basket Table
- [2] Basket Rod #1 (2pcs.), preinstalled
- [3] Printer Securing Bolts (2pcs.)
- [4] Basket Cloth
- [5] Basket Rod #2
- [6] Basket Rod Caps (2pcs.)
- [7] Basket Wire #2
- [8] Basket Band, preinstalled
- [9] Basket Wire #1
- [10] Allen Wrench

b. Assembling the Desktop Basket

- Moving the printer requires at least three people, one on either side. Be careful to avoid back strain and other injuries.

F-3-126

- When moving the printer, grasp the carrying handles [1] on the left and right side of the bottom. Holding other portions can drop the printer and you may be injured.

F-3-127

- Be sure to remove the Cassette and Output Tray before installing the printer. Grasp the handle on the front of the Cassette and pull it forward a little. Holding the Cassette on both sides with both hands, remove the Cassette. Holding the Output Tray on both sides by the far end, press the button to release the lock, and then remove the Tray.

F-3-128

- If a roll is loaded, be sure to remove the roll before this procedure. Remove the Roll Holder from the Auto Roll Feed Unit. Fasten a paper band or the like around the paper to prevent the roll from unwinding.

F-3-129

(1) Put the Basket Table [1] on a desk or other flat surface and push it against the desk to eliminate any space between the side of the Basket Table [2] and the edge of the desk.

F-3-130

(2) Assemble the Output Stacker, referring to steps (4) - (10) in "Installing the Stand" > "Assembling the Output Stacker".

F-3-131

(3) Holding the printer on both sides by the Carrying handles, set it on top of the black parts [2] of the Basket Table [1]. Slide the printer gently back to load it into the Basket Table. Align the printer with the diagonal line [3] on the left side of the black part [2].

F-3-132

Be careful to avoid pinching your fingers between the Basket Table and Stand.

(4) With the printer resting on the Basket Table [1], slide the Basket Table to the right. Align the side [3] of the Basket Table [1] with the edge of the desk so that the holes [2] are visible.

F-3-133

- (5) Insert the Main Unit Securing Bolt [1] in the hole [3] of the Basket Table [2] from below and tighten it with the Allen Wrench [4] to secure the printer.

F-3-134

- (6) Repeat steps (4) and (5) to secure the printer to the Basket Table on the left side the same way.

F-3-135

- (7) Return the Basket Table [1] to the original position and push it against the desk to eliminate any space between its side [2] and the edge of the desk.

F-3-136

- (8) Hold the Output Tray on both sides by the near end. Aligning the Output Tray with the guides, insert it into the printer until it locks in place.

F-3-137

(9) Holding the Cassette on both sides with both hands, insert it firmly into the printer.

F-3-138

3.1.3 Checking the Images/Operations

3.1.3.1 Checking the Images /Operations

iPF5000 / iPF5100

Do the paper set and the driver installation, and do the test print.

3.2 Transporting the Printer

3.2.1 Transporting the Printer

3.2.1.1 Transporting the Printer

iPF5000 / iPF5100

When transporting the printer, the printhead must be capped and stay in the carriage. In spite of this precaution, shocks incurred during transportation can damage the printhead. Print the nozzle check pattern before making preparations for transporting the printer, print the nozzle check pattern again after installing the printer at the new location, and then compare the two printouts. If any problem such as nozzle clogging cannot be resolved by printhead cleaning, replace the printhead with a new one.

a. Moving the printer on the same floor having no step

- (1) Turn off the Power button on the printer and check that the head is capped.
- (2) Open the top cover and mount the belt stopper.
When mounting the belt stopper, be careful not to move the carriage by applying too much pressure to the carriage. If the carriage moves with the head capped, the rubber part of the cap may touch the nozzles on the head and damage the printhead.
- (3) Close the upper cover.
- (4) Remove the roll holder from the roll holder slot.
- (5) Remove the interface cable, power cord from the printer.
- (6) Hold the carrying handles at the bottom, and then slowly move the printer.
If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage and damage to the printhead. Be sure to move the printer slowly and carefully.

b. Moving the printer on the same floor having a step(s)

When the printer is operating properly, follow the instructions described in "When the printer is not operating".

When the printer is operating properly

To prevent the waste ink from leaking, drain the ink, wait about 15 minute, and then remove the maintenance cartridge. Package the removed maintenance cartridge so that the waste ink does not leak.

- (1) Turn on the Power button on the printer.
- (2) Remove the roll holder from the roll holder slot
- (3) Enter the Main menu, and then select "Maintenance" > "Move Printer". Remove all ink tanks following the displayed messages.
Put the removed ink tanks in the plastic bag with the ink port up and close the opening. It takes about 4 minutes to complete the "Move Printer" operation.

* "Move Printer" cannot be selected when "MT Cartridge Full Soon" is displayed.

In this case, replace the maintenance cartridge first.

* Never disconnect the power cord or open any cover while the "Move Printer" operation is in progress since this can cancel the operation.

If the "Move Printer" operation is canceled while in progress, the printer will remain in the offline mode and will not return to the online mode.

The "Ink Filling" operation is performed when the power is turned back on after canceling, so repeat the "Move Printer" operation from the beginning.

* The "Move Printer" operation will drain about 38 g of ink per color from the printer to the maintenance cartridge.

- (4) When the "Move Printer" operation is completed, turn off the Power button.
- (5) Open the top cover to check that the head is capped, and then secure the carriage with the belt stopper.
- (6) Close the top cover.
- (7) Disconnect the interface cable, power cord, and ground cable from the printer.
- (8) Wait about 15 minutes after completion of the "Move Printer" operation, remove the maintenance cartridge, and then package it so that waste ink does not leak.
Check that waste ink is no longer leaking after removing the maintenance cartridge. If it is leaking, install the maintenance cartridge and wait until waste ink no longer leaks.
- (9) Attach the cushioning materials and tape.
- (10) Pack the printer in the packing box, and then put the roll media, ink tank, and optional devices in another packing box for moving.
Use the original packing materials for the printer and other optional devices. If they are not available, pack them with a sufficient amount of cushioning materials.

When the printer is not operating properly

- (1) Make sure that the printer is turned off.
- (2) Disconnect the interface cable, power cord, and ground cable from the printer.
- (3) Remove the roll holder from the roll holder slot.
- (4) Drain ink from the printer.
- (5) Manually cap the printhead.

* Manual capping is an emergency measure used when the printer does not operate properly, so it can damage the printhead.

- (6) Remove the maintenance cartridge, and then package it so that waste ink does not leak.
- (7) Attach all external covers.
- (8) Open the top cover, and then secure the carriage with the belt stopper.
- (9) Close the top cover.
- (10) Attach the cushioning materials and tape.
- (11) Pack the printer in the packing box, and then put the roll media, ink tank, and optional devices in another packing box for moving.
Use the original packing materials for the printer and other optional devices. If they are not available, pack them with a sufficient amount of cushioning materials.

Before transporting the printer, be sure to go through the following steps to protect the internal mechanism. For the printer packaging work and the installation work after transportation, refer to the "Quick Start Guide".

* When "Check Free Space in Maintenance C" or "Replace Maintenance Cartridge" is shown on the display, you cannot make preparations for transportation. First replace the maintenance cartridge, and then make preparations for transportation.

* Do not incline the printer during transportation. The internal ink may leak and the surrounding area may be stained. If it is necessary to place the printer with either side up or down or to incline the printer, contact your sales agent.

3.2.2 Reinstalling the Printer

3.2.2.1 Reinstalling the Printer

iPF5000 / iPF5100

When installing the printer after moving it on the same floor having no step

If you have moved the printer to the installation site on the same floor having no step without draining ink, check the operation test pattern.

When installing the printer after moving it on the same floor having a step(s)

If you have moved the printer to the installation site on the same floor having a step(s) with ink drained, install it again in the same manner as that for initial installation after reception of the delivered printer.

- 1) Unpack the printer.
- 2) Remove the cushioning materials and tape from the printer.
- 3) Install the maintenance cartridge.
- 4) Remove the belt stopper.
- 5) Connect the power cord.
- 6) Turn on the Power button and install ink tanks according to the displayed messages. Ink filling will start.
Load paper and check for normal operation.

4.1 Service Parts

4.1.1 Service Parts

iPF5000 / iPF5100

The service parts indicated below require careful handling.

1. Keep all packages with the warning not to turn over.

Pay careful attention to all individually packaged service part (carriage unit, purge unit, ink tank unit, and other parts) boxes marked "This side up" and handle appropriately.

F-4-1

4.2 Disassembly/Reassembly

4.2.1 Disassembly/Reassembly

iPF5000

For the procedure for disassembly/reassembly of the components excluding the major components, refer to the parts catalog.

For the major components, the disassembly flow and detailed disassembly procedures are shown below.

there are the following four major units:

1. Carriage unit
2. Purge unit
3. Cutter unit
4. Ink tank unit

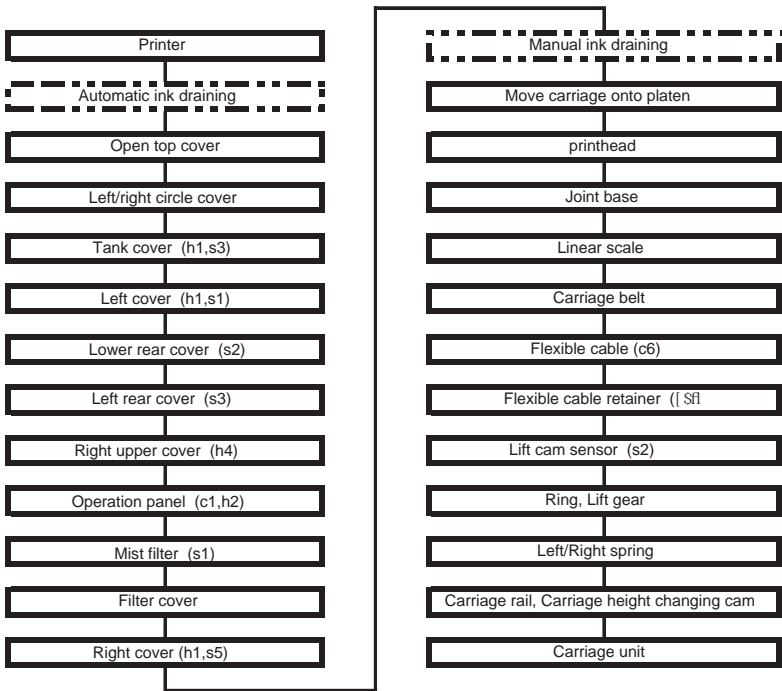

Illustrations in the parts catalog are assigned illustration numbers according to the order in which parts are disassembled.

Major Units Disassembly Flow

* The ink drain operation enclosed in a dashed line must be carried out either manually or automatically.

1) Carriage unit disassembly flow

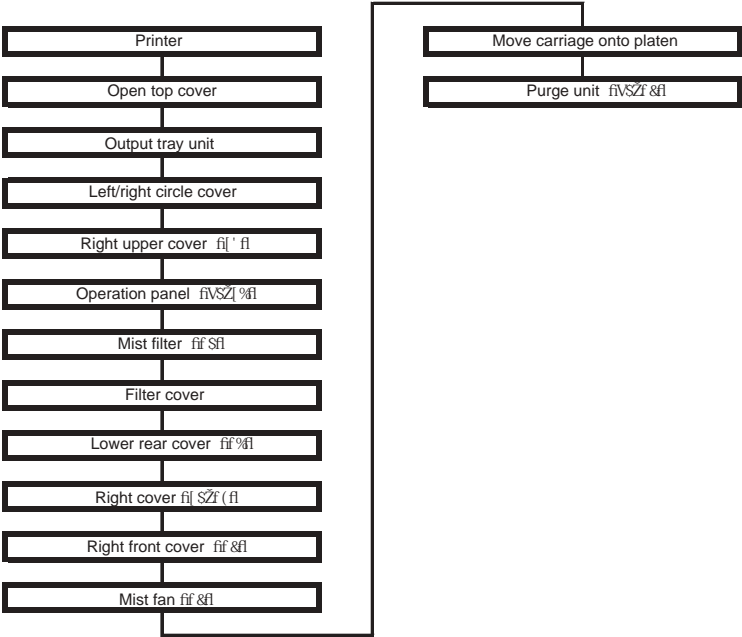

<Meanings of symbols> c:Connector h:Hook s:screw

F-4-2

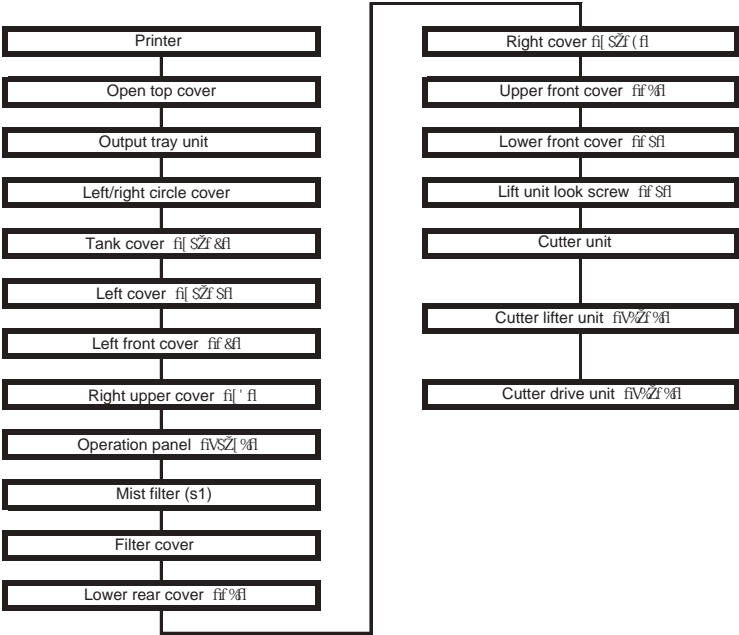

2) Purge unit disassembly flow

<Meanings of symbols> c:Connector h:Hook s:screw

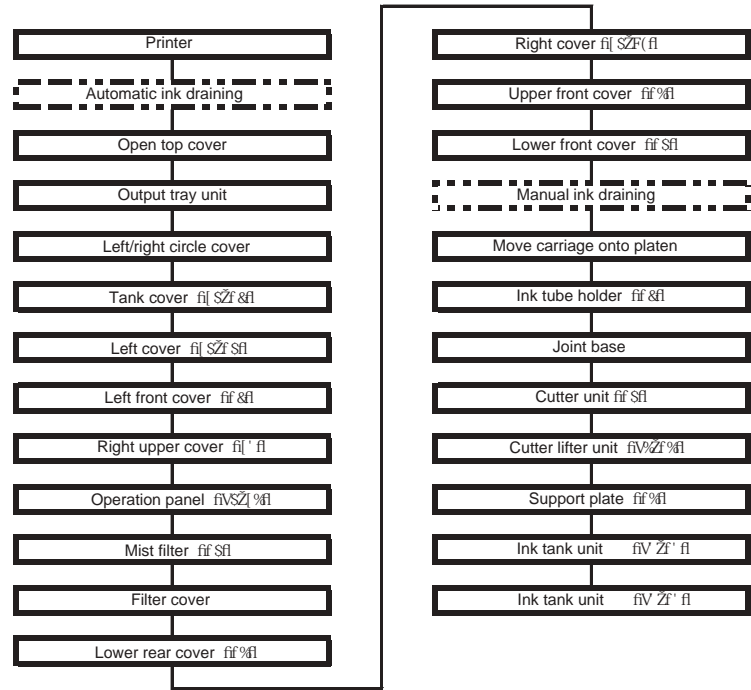

F-4-3

3) Cutter unit disassembly flow
<Meanings of symbols> c:Connector h:Hook s:screw

F-4-4

4) Ink tank unit disassembly flow
<Meanings of symbols> c:Connector h:Hook s:screw

F-4-5

4.2.2 Disassembly/Reassembly

iPF5100

For the procedure for disassembly/reassembly of the components excluding the major components, refer to the parts catalog. Illustrations in the parts catalog are assigned illustration numbers according to the order in which parts are disassembled.

4.3 Points to Note on Disassembly and Reassembly

4.3.1 Note on assemblies (or units) prohibited from disassembly

iPF5000 / iPF5100

Assemblies that are prohibited from disassembly and their adjustment outside the factory cannot be conducted are indicated by red screws. Don't never loosen or remove the red screw, because normal operation and print can't be done if it is loosened or removed.

F-4-6

4.3.2 Moving the carriage manually

iPF5000 / iPF5100

Move the carriage as required during disassembly/reassembly to prevent the carriage from contacting the parts to be removed. The carriage does not move when capped. When uncapping moving the carriage, refer to the procedures in DISASSEMBLY/REASSEMBLY>Points to Note on Disassembly and Reassembly>Opening the Cap/Moving the Wiper Unit.

4.3.3 Units requiring draining of ink

iPF5000 / iPF5100

When disassembling the following units of the ink passage, drain ink completely to prevent it from leaking. For how to drain ink, refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Draining the Ink.

[1] Carriage unit

Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Carriage Unit.

[2] Ink tank unit

Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Ink Tank Unit.

F-4-7

4.3.4 External Covers

iPF5000

a) Left/right circle cover

Removing the left/right circle cover

- 1) When removing the left circle cover [1], turn it in the direction of the arrow.

- 2) When removing the right circle cover [1], turn it in the direction of the arrow.

Attaching the left/right circle cover

- 1) When attaching the left circle cover, fit it in place with the three hooks [1] up and turn it toward the rear side of the printer. when attaching the right circle cover, fit it in place with the two hooks [2] up and turn it toward the rear side of the printer.

b) Tank cover

Removing the left cover

- 1) When removing the tank cover[4], remove the left circle cover and then open the top cover.
- 2) Open the tank cover, remove the three screws[1], and then release the three hooks[2] while opening the hook[3] outward.

F-4-11

c) Left cover

Removing the left cover

- 1) When removing the left cover[3], remove the left circle cover, open the top cover, and then remove the tank cover.
- 2) Remove the screw[1], remove the hook[2], and slide the tank cover in the direction of arrow 2, and then slide it in the direction of arrow 3.

F-4-12

d) Lower rear cover

Removing the lower rear cover

- 1) When removing the lower rear cover[2], remove the two screws[1] and then remove it.

F-4-13

e) Left rear cover

Removing the left rear cover

- 1) When removing the left rear cover[2], open the top cover, and then remove the left circle cover, tank cover, and left rear cover.

2) Remove the three screws[1], and then remove the left rear cover[2].

F-4-14

f) Left front cover

Removing the left front cover

- 1) When removing the left front cover[2], open the top cover, and then remove the left circle cover, tank cover, cassette, and output tray unit.
- 2) Remove the three screws[1], and then remove the left front cover[2].

F-4-15

g) Right upper cover

Removing the right upper cover

- 1) When removing the right upper cover[2], open the top cover, and then remove the right circle cover.
- 2) Release the two hooks[1], and then remove the right upper cover[2].

F-4-16

h) Operation panel

Removing the operation panel

- 1) When removing the operation panel[3], open the top cover and right upper cover.
- 2) Release the two hooks[1] and the flexible cable[2].

F-4-17

i) Filter cover

Removing the filter cover

- 1) When removing the filter cover [1], push it in the direction of the arrow while pressing on the handhold.

F-4-18

j) Mist filter

Removing the mist filter

- 1) When removing the mist filter [2], open the top cover, and then remove the right circle.
- 2) Removing the screw [1], and then remove the mist filter [2].

F-4-19

k) Right cover

Removing the right cover

- 1) When removing the right cover [2], open the top cover, and then remove the right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, and lower rear cover.
- 2) Remove the five screws [1] and hook [A], and then remove the right cover [2].

F-4-20

l) Right front cover

Removing the right front cover

- 1) When removing the right front cover[2], open the top cover, output tray unit, right circle cover, operation panel, mist filter, filter cover, filter, and right cover.
- 2) Remove the two screws[1], and then remove the right front cover[2].

F-4-21

m) Upper rear cover

Removing the upper rear cover

- 1) When removing the upper rear cover[2], open the top cover, left circle cover, tank cover, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, right cover, and rear lower cover.
- 2) Remove the three screws[1], and then remove the upper rear cover[2].

F-4-22

n) Upper front cover

Removing the upper front cover

- 1) When removing the upper front cover[3], open the top cover, left circle cover, tank cover, right circle cover, right upper cover, and operation panel.
- 2) Remove the two screws[1], and then remove the upper front cover while releasing the three hooks[2].

F-4-23

o) Lower front cover

Removing the lower front cover

- 1) When removing the lower front cover[3], open the top cover, left circle cover, tank cover, right circle cover, right upper cover, operation panel, and upper front cover.
- 2) Remove the screw[1], and then remove the lower front cover[2].

F-4-24

p) Rear cover

Removing the rear cover

- 1) When removing the rear cover[2], open the top cover, left circle cover, tank cover, left cover, left rear cover, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, right cover, and lower rear cover.
- 2) Remove the three screws[1], and then remove the rear cover[2].

F-4-25

q) Lower back cover

Removing the lower back cover

- 1) When removing the lower back cover[2], open the top cover, left circle cover, tank cover, left cover, left rear cover, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, right cover, and lower rear cover.
- 2) Remove the two screws[1], and then remove the lower back cover[2].

r) Cover guide

Removing the cover guide

- 1) When removing the cover guide[2], open the top cover, left circle cover, tank cover, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, right cover, and lower rear cover.
- 2) Remove the two screws[1], and then remove the cover guide[2].

s) Cover support plate (right)

Removing cover support plate (right)

- 1) When removing the cover support plate(right)[2], open the top cover, left circle cover, tank cover, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, right cover, lower rear cover, cover guide, and upper rear cover.
- 2) Remove the three screws[1], and then remove the cover support plate(right)[2].

t) Cover support plate (left)

Removing the cover support plate (left)

- 1) When removing the cover support plate (left)[2], open the top cover, left circle cover, tank cover, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, right cover, lower rear cover, and upper rear cover.
- 2) Remove the three screws[1], and then remove the cover support plate (left)[2].

4.3.5 External Covers

iPF5100

a) Left/right circle cover

Removing the left/right circle cover

1) When removing the left circle cover[1], turn it in the direction of the arrow.

2) When removing the right circle cover[1], turn it in the direction of the arrow.

Attaching the left/right circle cover

1) When attaching the left circle cover, fit it in place with the three hooks[1] up and turn it toward the rear side of the printer. when attaching the right circle cover, fit it in place with the two hooks[2] up and turn it toward the rear side of the printer.

F-4-32

b) Roll Feed Unit

Removing the roll feed unit

1) Remove two coin screws[1] to remove roll feed unit[2].

F-4-33

c) Tank cover

Removing the tank cover

- 1) When removing the tank cover[4], open the top cover, and then remove the left circle cover.
- 2) Open the tank cover, remove the three screws[1], and then release the three hooks[2] while opening the hook[3] outward.

F-4-34

d) Left cover

Removing the left cover

- 1) When removing the left cover[3], open the top cover, and then remove the left circle cover and tank cover.
- 2) Remove the screw[1] and the hook[2], and slide the left cover in the direction of arrow 2, and then slide it in the direction of arrow 3.

F-4-35

e) Lower rear cover

Removing the lower rear cover

- 1) When removing the lower rear cover[2], remove the two screws[1] and then remove it.

F-4-36

f) Left rear cover

Removing the left rear cover

- 1) When removing the left rear cover[2], open the top cover, and then remove the roll feed unit, left circle cover, tank cover, left cover, lower rear cover, and lower rear left cover.
- 2) Remove the three screws[1], and then remove the left rear cover[2].

F-4-37

g) Left front cover

Removing the left front cover

- 1) When removing the left front cover[2], open the top cover, and then remove the roll feed unit, left circle cover, tank cover, cassette, and output tray unit.
- 2) Remove the three screws[1], and then remove the left front cover[2].

F-4-38

h) Right upper cover

Removing the right upper cover

- 1) When removing the right upper cover[2], open the top cover, and then remove the right circle cover.
- 2) Release the two hooks[1], and then remove the right upper cover[2].

F-4-39

i) Operation panel

Removing the operation panel

- 1) When removing the operation panel[3], open the top cover, and then remove the right circle cover and right upper cover.
- 2) Remove the two hooks[1] and the flexible cable[2], then remove the operation panel[3].

F-4-40

j) Exhaust Filter

Removing the exhaust filter

- 1) When removing the filter cover[1], push it in the direction of the arrow while pressing on the handhold.

F-4-41

2) Remove the exhaust filter[2] while pushing the hook[1].

F-4-42

k) Mist filter

Removing the mist filter

- 1) When removing the mist filter[2], open the top cover, and then remove the right circle cover.
- 2) Removing the screw[1], and then remove the mist filter[2].

F-4-43

l) Right cover

Removing the right cover

- 1) When removing the right cover[3], open the top cover, and then remove the roll feed unit, right circle cover, right upper cover, operation panel, exhaust filter, and lower rear cover.
- 2) Remove the six screws[1] and hook[2], and then remove the right cover[3].

F-4-44

Note on attaching the right cover

Be careful in attaching the right cover not to press the ink tubes with the edges of the cover.

F-4-45

m) Right front cover

Removing the right front cover

- 1) When removing the right front cover[2], open the top cover, and then remove the roll feed unit, output tray unit, right circle cover, operation panel, exhaust filter, right cover, and lower rear cover.
- 2) Remove the two screws[1], and then remove the right front cover[2].

F-4-46

n) Rear cover

Removing the rear cover

- 1) When removing the rear cover[2], open the top cover, and then remove the roll feed unit, left circle cover, tank cover, left circle cover, right upper cover, operation panel, exhaust filter, right cover, lower rear cover, left cover, and left rear cover.
- 2) Remove the three screws[1], and then remove the rear cover[2].

F-4-47

o) Upper rear cover

Removing the upper rear cover

- 1) When removing the upper rear cover[2], open the top cover, and then remove the roll feed unit, left circle cover, tank cover, left cover, right circle cover, right upper cover, operation panel, exhaust filter, right cover, and lower rear cover.
- 2) Remove the three screws[1], and then remove the upper rear cover[2].

F-4-48

p) Upper front cover

Removing the upper front cover

- 1) When removing the upper front cover[3], open the top cover, and then remove left circle cover, tank cover, left cover, right circle cover, right upper cover, operation panel, right cover, and exhaust filter.
- 2) Remove the two screws[1], and then remove the upper front cover[3] while releasing the three hooks[2].

F-4-49

q) Lower front cover

Removing the lower front cover

- 1) When removing the lower front cover[3], open the top cover, and then remove the left circle cover, tank cover, right circle cover, right upper cover, operation panel, upper front cover, right cover, and exhaust filter.
- 2) Remove the three screws[1], and then remove the lower front cover[2].

F-4-50

r) Lower back cover

Removing the lower back cover

- 1) When removing the lower back cover[2], open the top cover, and then remove the roll feed unit, left circle cover, tank cover, left cover, lower rear cover, lower rear left cover, left rear cover, right circle cover, right upper cover, operation panel, exhaust filter, and right cover.
- 2) Remove the two screws[1], and then remove the lower back cover[2].

F-4-51

s) Cover guide

Removing the cover guide

- 1) When removing the cover guide[2], open the top cover, and then remove the roll feed unit, left circle cover, tank cover, left cover, right circle cover, right upper cover, operation panel, exhaust filter, lower rear cover, lower rear left cover, left lower cover, rear cover, upper rear cover, and upper front cover.
- 2) Remove the two screws[1], and then remove the cover guide[2].

F-4-52

t) Cover support plate (right)

Removing cover support plate (right)

- 1) When removing the cover support plate (right)[2], open the top cover, and then remove the roll feed unit, left circle cover, tank cover, left cover, right circle cover, right upper cover, operation panel, exhaust filter, right cover, lower rear cover, left rear cover, rear cover, upper rear cover, upper front cover, and cover guide.
- 2) Remove the three screws[1], and then remove the cover support plate (right)[2].

F-4-53

u) Cover support plate (left)

Removing the cover support plate (left)

1) When removing the cover support plate (left)[2], open the top cover, and then remove the roll feed unit, left circle cover, tank cover, left front cover, left cover, right circle cover, right upper cover, operation panel, exhaust filter, right cover, lower rear cover, rear cover, upper rear cover, upper front cover, and lower front cover.

2) Remove the three screws[1] and two connectors[3], and then remove the cover support plate (left)[2].

F-4-54

4.3.6 Driving Unit

iPF5000 / iPF5100

a) Feed motor

Removing the feed motor

1) When removing the feed motor[1], remove the main controller support plate.

Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > PCBs

2) Loosen the two screws[2], and then remove the timing belt[3] from the pulley.

3) Remove the two screws[4] and connector[5], and then remove the feed motor[1].

Note on mounting the feed motor

When mounting the feed motor, attach the timing belt[3] on the pulley, and then tighten the two screws[2].

4.3.7 Cutter

iPF5000 / iPF5100

a) Removing the cutter unit

- 1) When removing the cutter unit, open the top cover, and then remove the cassette, output tray unit, left and right circle covers, tank cover, lower rear cover, left and right covers, right upper cover, operation panel, left and right front cover, upper front cover, mist filter, filter cover, filter, and lower front cover. Refer to **DISASSEMBLY/REASSEMBLY > Points to note on Disassembly and Reassembly > External Covers**.
- 2) Turn the motor pulley[1] in the direction of the arrow to lower the cutter unit[2].

F-4-56

- 3) Remove the screw[1], shift the stopper[2] to the left, and then slide the cutter unit[3] to upper left to remove it.

F-4-57

b) Points to note on Disassembly and Reassembly of Cutter unit

- 1) When disassembling or reassembling the cutter unit, align the cutter unit roller with the grooves[1] in the cutter lifter unit and cutter drive unit.

F-4-58

c) Removing the cutter lifter unit

- 1) Remove the cutter unit.
- 2) Remove the belt[1], two screws[2], and harness, and then remove the cutter lifter unit[3].

F-4-59

d) Removing the cutter drive unit

- 1) Remove the cutter unit.
- 2) Remove two screws[1] and two connectors[2] and free the harness from harness guide [3] to remove cutter drive unit[4].

F-4-60

4.3.8 Carriage Unit

iPF5000

a) Removeing the carriage unit

- 1) Drain the ink. Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Draining the Ink.
- 2) Turn off the power, and then move the carriage over the platen. **Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Opening the Caps and Moving the Wiper Unit.**
- 3) Remove the printhead.
- 4) Remove the joint of the ink tube unit. Wrap the removed joint with a plastic bag or other covering so that ink does not splashes, then close the plastic bag.

F-4-61

- 5) Remove the linear scale[1] from the right clamp plate's spring, and then remove it rightward.

F-4-62

When removing the linear scale, take care not to damage or stain it. The stained or damaged liner plate can cause malfunction.

- 6) While sliding the pulley[2] to the left, remove the carriage belt. Tie the removed belt lightly on the unit.

F-4-63

- 7) Disconnect the two connectors[1] and four connectors[2] of the flexible cables on the main controller PCB.

F-4-64

The flexible cable connectors[2] are provided with a locking mechanism. When disconnecting or reconnecting the flexible cable, be sure to release the lock. Otherwise, the flexible cable can damage, resulting in malfunction.

- 8) Release the hook[2], and then remove the flexible cable retainer[1].

F-4-65

- 9) Turn the gear [1] so that the sensor flag of the lift gear [2] leaves the interrupt position of the lift cam sensor [3], then remove the ring [4], the lift gear [2] and the lift cam [5]. Disconnect the connector [6], remove the two screws [7], and then remove the lift cam sensor [3]. Remove the two torsion springs [8], pull out the carriage rail [9] from the right side of the printer, and then remove the carriage.

F-4-66

b) Points to Note on disassembly and Reassembly of Carriage Unit

- 1) Align the mark on the gear[3] with the mark on the bushing[4]. Align the mark on the lift gear[1] with the mark on the gear[2] to remove the ring[5].

F-4-67

2) Mount the flexible cable holder retainer hooks at [A] [C] and [G].

F-4-68

c) Multi Sensor Recalibration

Since multi sensors have individual electrical specificity, the following are recalibrated at the factory, namely, the optical axis of the sensor, the sensor gain for measuring the printhead height and color reproduction. Accordingly, carry out the following adjustments in the service mode whenever replacing the carriage unit or multi sensor.

* The multi sensor reference plate must be replaced at the same time whenever the carriage or the multi sensor is being replaced.

- Service mode : SERVICE MODE > ADJUST > GAP CALIB

- Service mode : SERVICE MODE > ADJUST > SENSOR CALIB
Test chart : CL-7(Tool No. : FY9-9323 Use anew chart.)

- Service mode : SERVICE MODE > ADJUST > PRINT PATTERN > OPTICAL AXIS
Media type : Photo glossy paper
Media size : Media having a width equal to or larger than that of A2-size paper

d) Adjusting the wire roller

To prevent the wire roller mounted on the carriage from contacting the duct and others during carriage operation, perform the following adjustment whenever you have removed or replaced the carriage unit. This adjustment is not required when you have replaced only the multi sensor.

* Make adjustments with the carriage lock released.

* Make adjustments with the tube disconnected from the tube guide.

(1) Loosen the two screws [1].

(2) Turn the gear [2] until the lift cam flag [3] reaches the position shown below.

* Bottom position where the sensor [4] light is blocked by the flag (lowest position to which the carriage unit descends).

F-4-69

(3) Place the scale[5] on the mist fan as shown below, adjust the wire guide height so that the wire roller[6] touches the top surface of the scale, and then tighten the screw loosened in step (1).

F-4-70

- * To prevent the wire roller from being disengaged, install the right cover with the carriage moved onto the platen.
- * After installing the right cover, check that the wire roller has not been disengaged.

4.3.9 Carriage Unit

iPF5100

a) Removeing the carriage unit

1) Drain the ink.

Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Draining the Ink.

2) Turn off the power, and then move the carriage over the platen.

Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Opening the Cap/Moving the Wiper Unit.

3) Remove the printhead.

4) Remove the joint of the ink tube unit. Wrap the removed joint with a plastic bag or other covering so that ink does not splashes, then close the plastic bag.

F-4-71

5) Remove the linear scale[1] from the right clamp plate's spring, and then remove it rightward.

F-4-72

When removing the linear scale, take care not to damage or stain it. The stained or damaged liner plate can cause malfunction.

6) While sliding the pulley[2] to the left, remove the carriage belt[1]. Tie the removed belt lightly on the unit.

F-4-73

7) Disconnect the two connectors[1] and four connectors[2] of the flexible cables on the main controller PCB.

F-4-74

The flexible cable connectors[2] are provided with a locking mechanism. When disconnecting or reconnecting the flexible cable, be sure to release the lock. Otherwise, the flexible cable can damage, resulting in malfunction.

- 8) Insert flat-head screwdriver[3] into the part shown to release hook[2] and then remove flexible cable retainer[1]. (If flexible cable retainer[1] is marked with index[A], insert the flat-head screw driver to meet the index.)

F-4-75

- 9) Turn the gear[1] so that the sensor flag of the lift gear[2] leaves the interrupt position of the lift cam sensor[3], then remove the ring[4], the lift gear[2] and the lift cam[5]. Disconnect the connector[6], remove the two screws[7], and then remove the lift cam sensor[3]. Remove the two torsion springs[8], pull out the carriage rail[9] from the right side of the printer, and then remove the carriage.

F-4-76

b) Points to Note on disassembly and Reassembly of Carriage Unit

1) Align the mark on the gear[3] with the mark on the bushing[4]. Align the mark on the lift gear[1] with the mark on the gear[2] to remove the ring[5].

F-4-77

2) Install the linear scale with its R-mark [1] located on the right side of the unit.

F-4-78

3) Install left right lift cam [1] so its circular dent comes in the direction as shown (right side of the unit).

F-4-79

c) Note on attaching the flexible cable

1) Insert flexible cable[2] through three claws[1] in the flexible cable retainer.

F-4-80

2) Lightly fold the flexible cable in its marked area[1] and pass it through claws[2].

F-4-81

3) Insert folded flexible cable [1] through three claws [2].

4) Pull flexible cable [1] lightly from both sides to remove slacks in it.

F-4-82

5) Having installed the flexible cable retainer, align and flatten the flexible cables.

6) Attach flexible guide sheet [1] over flexible cable [2] with its left end aligned with the limit position shown and its rear kept in contact with the side plate.

F-4-83

d) Multi Sensor Recalibration

Since multi sensors have individual electrical specificity, the following are recalibrated at the factory, namely, the optical axis of the sensor, the sensor gain for measuring the printhead height and sensor reproduction. Accordingly, carry out the following adjustments in the service mode whenever replacing the carriage unit or multi sensor.

* The multi sensor reference plate must be replaced at the same time whenever the carriage or the multi sensor is being replaced.

- Service mode : SERVICE MODE > ADJUST > GAP CALIB.

- Service mode : SERVICE MODE > ADJUST > PRINT PATTERN > OPTICAL AXIS

Media type : Photo glossy paper

Media size : Media having a width equal to or larger than that of A2-size paper

e) Adjusting the wire roller

To prevent the wire roller mounted on the carriage from contacting the duct and others during carriage operation, perform the following adjustment whenever you have removed or replaced the carriage unit. This adjustment is not required when you have replaced only the multi sensor.

* Make adjustments with the carriage lock released.

* Make adjustments with the tube disconnected from the tube guide.

1) Remove the ink tube from the wire guide.

2) Loosen the two screws[1]

3) Turn the gear[2] until the lift cam flag[3] reaches the position shown below.

* Bottom position where the sensor[4] light is blocked by the flag (lowest position to which the carriage unit descends)

F-4-84

4) Remove clip [1] and roller retainer [2] from the carriage wire tool.

F-4-85

5) Install carriage wire tool [1] in position with its leaf spring being attached to the top of mist fan [2].

F-4-86

6) Moving the carriage, adjust the height of the wire guide to bring its roller [1] into contact with the top of carriage wire tool [2].

F-4-87

7) Secure roller retainer [1] with clip [3] in contact with the top of roller [2].

F-4-88

8) Retighten two screws [1] loosened in Step 2) to secure the wire guide.

F-4-89

9) Pass the ink tubes through the wire guides.

4.3.10 Feeder Unit

iPF5000 / iPF5100

a) Removing the pinch roller

- 1) Remove the rear cover.
- 2) When removing the pinch roller, press down the pinch roller unit[1] in the direction of the arrow.

F-4-90

- 3) Remove the pinch roller[1].

F-4-91

b) Removing the cassette pick-up roller

- 1) When removing the cassette pick-up roller, first remove the back cover and cassette.
- 2) Then the gear[1] so that the pick-up cam[2] presses down the arm[3] to the lowest position. Release the hook[A], and then remove the cassette pick-up roller[4] while sliding it in the direction of the arrow.

F-4-92

c) Precaution for mounting the roller

When mounting the cassette pick-up roller, fit the projection[A] on the cassette pick-up roller holder[1] in the grooves in the cassette pick-up roller.

F-4-93

d) Removing the cassette separation roller

1) When removing the cassette separation roller, first open the top cover, and then remove the back cover, left and right covers, tank cover, right upper cover, operation panel mist filter, filter cover, filter, left and right covers, lower rear cover, and lower back cover.

2) Remove the cassette pick-up sensor[3] by removing the screw[1] and connector[2].

F-4-94

3) Then the gear[1] to make sure that the pick-up cam[2] is at the position shown below (the arm[3] is raised).

F-4-95

4) Remove one ring[1] and two gears[2].

F-4-96

5) Press up the guide[1] in the direction of the arrow.

F-4-97

6) Remove the bearing[1] and ring[3], and then remove the separation roller shaft[2].

F-4-98

7) Remove the lever[1] while turning it in the direction of the arrow.

F-4-99

8) Remove the two springs[1], and then remove the cassette separation roller[2].

F-4-100

e) Precaution for mounting the cassette separation roller

1) Align the mark on the gear[1] with the mark on the gear[2].

**f) Removing the spur unit**

1) When removing the spur unit, first open the top cover, and then remove the left and right circle covers, tank cover, right upper cover, operation panel, lower rear cover, right cover, right front cover, upper front cover, lower front cover, cover guide, upper rear cover, and left and right cover mounting plates. Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > External Covers.

2) Remove the three screws[1], and then remove the mist fan[2].

3) Remove the three screws[2], and then remove the two tube guides[1]. Remove the ink tube[3] from the front duct[4].

4) Remove the front duct[2] by removing the four screws[1].

F-4-104

5) Turn the pulley[1] in the direction of the arrow so that the spur unit[2] is at the top position.

F-4-105

6) While pressing down the protrusion[A], slide the spur unit[1] in the direction of the arrow to remove it.

F-4-106

g) Handling the Feed Roller

The feed roller is an important mechanical component of the printer. Follow the precaution below when handling it.

- * Do not touch the feed roller surface (coated surface).
- * Do not scratch or dent the feed roller.

4.3.11 Roll Feed Unit

iPF5000 / iPF5100

a) Removing the roll motor

1) When removing the roll motor, remove the roll feed unit[2] from the main body, and then remove the right cover[3] by removing the two screws[1]

2) Remove the four screws[1], and then remove the left cover[2] and paper tray[3].

3) Remove the three screws[1], and then remove the right inner cover[2].

4) Remove the two screws[1], and then remove the roll motor[2].

F-4-110

b) Removing the roll feed unit

1) When removing the roll motor, remove the roll feed unit[2] from the main body, and then remove the right cover[3] by removing the two screws[1].

F-4-111

2) Remove the four screws[1], and then remove the left cover[2] and paper tray[3].

F-4-112

3) Remove the three screws[1], and then remove the right inner cover[2].

F-4-113

4) Remove the two screws[1], and then remove the roll feed unit PCB[2].

F-4-114

4.3.12 Purge Unit

iPF5000

a) Removing the purge unit

1) Turn the gear[1] of the purge unit[3] in the direction of the arrow to unlock and uncap the carriage. Next, move the carriage[2] onto the platen.

F-4-115

2) Disconnect the connector[1], and then remove the harness from the harness guide.

F-4-116

3) Remove the three screws[3], remove the waste ink tube joint[1] by turning it in the direction of the arrow, and then remove the purge unit[2].

F-4-117

b) Precaution for mounting the purge unit

When mounting the purge unit, pull out the waste ink tube[1] from the back of the printer to the position where the marking is visible. If the waste ink tube is not pulled out to the marking position, it may bend and cause ink leakage.

F-4-118

4.3.13 Purge Unit

iPF5100

a) Removing the purge unit

1) Turn the gear[1] of the purge unit[3] in the direction of the arrow to unlock and uncage the carriage. Next, move the carriage[2] onto the platen.

F-4-119

2) Remove connector[1] from the rear of the unit to free the harness from the harness guide.

F-4-120

3) Remove three screws[3] and press two claws[1] in the joint of the waste ink tube in the arrow direction to remove purge unit 2].

F-4-121

b) Precaution for mounting the purge unit

1) When mounting the purge unit, pull out the waste ink tube[1] from the back of the printer to the position where the marking is visible. If the waste ink tube is not pulled out to the marking position, it may bend and cause ink leakage.

Make sure that there is no break or the twist of the waste ink tube from the front of the printer.

F-4-122

2) Check waste ink tube[1] from the front of the unit to make sure that it is not broken or twisted.

F-4-123

3) Check that waste ink tube[1] is inserted in the hole in the absorber.

F-4-124

4.3.14 Waste Ink Collection Unit

iPF5000 / iPF5100

a) Removing the waste ink box

- 1) When removing the waste ink box, first remove the cassette and output tray.
- 2) Remove the two screws[1] and connector cover[2].

F-4-125

- 3) Disconnect the connector[2], and then remove the waste ink box[1].

F-4-126

b) Removing the mist fan

- 1) When removing the mist fan, first open the top cover, and then remove the output tray, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, right cover, and right front cover.

Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > External Cover.

- 2) Remove the three screws[1] and disconnect the connector, and then remove the mist fan[2].

F-4-127

c) Removing the platen duct

1) When removing the platen duct, first open the top cover, and then remove the output tray, maintenance cartridge, waste ink box, left and right circle cover, tank cover, right upper cover, operation panel, mist filter, filter cover, filter, right cover, right front cover, and mist fan. Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > External Cover.

2) Remove the three screws[2], and then remove the two tube guide[1]. Remove the ink tube[3] from the guide of the front duct[4].

3) Remove the front duct[2] by removing the four screws[1].

4) Remove four screws [1] and, while lifting the spur unit, remove two platens (front)[2].

5) Remove the three screws[1] and three bushings[2].

F-4-131

6) Disconnect the two waste ink tubes[1], and then remove the platen duct[6] by removing the seven screws[2] and five bushings[3] and bushing cover[4] and spring[5].

F-4-132

4.3.15 Ink Tank Unit

iPF5000 / iPF5100

a) Removing the ink tank unit

- 1) Drain the ink. Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Draining the ink.
- 2) Remove the output tray, left and right circle covers, tank cover, left and right covers, left and right front covers, right upper cover, operation panel, mist filter, filter cover, filter, lower rear cover, upper front cover, and lower front cover. Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > External Cover.
- 3) Move the carriage unit to the center. Refer to "Removing the Purge Unit".
- 4) Remove the three screws[2], and then remove the two tube guide[1].

- 5) Remove the four link levers[2] from the carriage unit[1], and then remove the joint base[3].

Put the removed joint base in a plastic bag so that ink does not splash.

F-4-135

6) Remove the cutter unit and cutter lifter unit.

Refer to DISASSEMBLY/REASSEMBLY > Point to Note on Disassembly and Reassembly > Cutter

7) Remove the two screws[1], and then remove the support plate[2].

F-4-136

8) Remove the four screws[1] and one joint[3], and then remove the two ink tank unit R[2].

F-4-137

9) Remove the four screws[1] and one joint[3], and then remove the two ink tank unit F[2].

F-4-138

b) Removing the valve motor unit.

1) When removing the valve motor unit, remove the ink tank cover.

2) Remove the two screws[1], disconnect the the two connectors[2], and then remove the valve motor unit[3].

F-4-139

4.3.16 Head Management Sensor

iPF5000 / iPF5100

a) Removing the head management sensor

1) Remove the screw[1], disconnect the connector[2], and then remove the head management sensor[3].

F-4-140

b) Procedure after replacing the head management sensor

Since the distance between the head management sensor and the carriage unit varies among printers, the optical axis is factory-adjusted to adjust the non-discharging detection position. When you have replaced the head management sensor or performed assembly/reassembly of surrounding parts that can change the distance between the head management sensor and the carriage unit, readjustment is required. Perform the readjustment in the service mode.

Service mode : SERVICE MODE > ADJUST > NOZZLE CHK POS.

4.3.17 Multi Sensor

iPF5000 / iPF5100

a) Removing the multi sensor

1) Remove the screw[1], disconnect the flexible cable[2], and then remove the multi sensor[3].

F-4-141

Since multi sensors have individual electrical specificity, the following are recalibrated at the factory, namely, the optical axis of the sensor, the sensor gain for measuring the printhead height and sensor reproduction. Accordingly, carry out the following adjustments in the service mode whenever replacing the carriage unit or multi sensor.

- * The multi sensor reference plate must be replaced at the same time whenever the carriage or the multi sensor is being replaced.
- * When replacing the carriage unit, refer to Adjustment and Setup > Procedure after Removing or Replacing the Carriage Unit.

- Service mode : SERVICE MODE > ADJUST > GAP CALIB.

- Service mode : SERVICE MODE > ADJUST > PRINT PATTERN > OPTICAL AXIS

Media type : Photo glossy paper

Media size : Media having a width equal to or larger than that of A2-size paper

4.3.18 PCBs

iPF5000 / iPF5100

Do not replace the main controller PCB and maintenance cartridge relay PCB(ROM board) at the same time.

These PCBs store important data such as settings and carriage drive time. Before replacement of either PCB, the data stored in it is moved to the other PCB through internal communication so that it can be taken over to the new PCB automatically. This is the reason why the two PCBs should not be replaced at the same time. If you want to replace both PCBs at the same time, first carry out the procedure "a" and then carry out the procedure "b".

After replacing with the maintenance controller PCB or maintenance cartridge relay PCB which are supplied as service parts, check that the firmware is the latest version.

a) Removing the main controller PCB

1) To remove the main controller PCB, open the top cover and remove the roll feed unit, left circle cover, tank cover, left cover, lower rear cover, lower rear left cover and left rear cover.

See DISASSEMBLY/REASSEMBLY > Points to note on Disassembly and Reassembly > External Covers.

2) Remove all connectors from the main controller PCB.

3) Remove two coin screws[1], interface cover[2] and screw[3] in this order.

F-4-142

4) Remove the ten screws[4] and free the harness from harness guide[5] to remove the main controller PCB[1].

F-4-143

b) Removing the main controller mounting plate

- 1) Remove the main controller PCB.
- 2) Free the harness from the harness guide.
- 3) Remove screw [1] and remove the flexible guide [2].

F-4-144

- 4) Remove the four screws [1] and two hooks [2] from the harness guide and remove main controller mounting plate [3].

F-4-145

c) Note on installing the cable holder

In installing the cable holder, secure ferrite core [1] to the flexible cable on the carriage with the cable holder before hooking the flexible cable from the operation panel at three claws [2].

F-4-146

d) Removing the power supply PCB

1) To remove the power supply PCB, open the top cover and remove the roll feed unit, left circle cover, tank cover, left cover, lower rear cover, lower rear left cover and left rear cover.

See DISASSEMBLY/REASSEMBLY > Points to note on Disassembly and Reassembly > External Covers.

2) Disconnect the two connectors[2] from power supply PCB[1].

3) Remove the five screws[3] and remove the power supply PCB[1] together with the mounting plate.

F-4-147

e) Procedure for replacing the maintenance cartridge relay PCB(ROM board)

1) Turn off the printer and unplug the power cord.

2) Replace the maintenance cartridge relay PCB.

3) Plug the power cord to the outlet, and then turn on the printer with the PAPER SOURCE button and INFORMATION button pressed down. (The printer will start up in the PCB Replacement mode.)

4) Check that "Initializing" appears on the display, and then release the buttons. (When the printer enters the PCB Replacement mode, the message lamp goes on.)

5) Wait until "REPLACE MODE" appears on the display.

6) Select "MC BOARD", and then press the ok button

7) Check that "TURN POWER OFF" appears on the display, and then turn off the printer.

8) Turn on the printer.

9) Check the firmware version. If the firmware is not the latest version, update.

f) Procedure for replacing the main controller PCB

1) Turn off the printer and unplug the power cord.

2) Replace the main controller PCB.

3) Plug the power cord to the outlet, and then turn on the printer with the PAPER SOURCE button and INFORMATION button pressed down. (The printer will start up in the PCB Replacement mode.)

4) Check that "Initializing" appears on the display, and then release the buttons. (When the printer enters the PCB Replacement mode, the message lamp goes on.)

5) Wait until "REPLACE MODE" appears on the display.

6) Select "MC BOARD", and then press the ok button

7) Check that "TURN POWER OFF" appears on the display, and then turn off the printer.

8) Turn on the printer.

9) Check the firmware version. If the firmware is not the latest version, update.

4.3.19 Opening the Cap/Moving the Wiper Unit

iPF5000

This section explains how to open the cap and ink supply valve manually.
To move the carriage with the power off, you need to release the carriage lock pin and cap manually.

1. Opening the Cap/Releasing the Carriage Lock Pin

- 1) Open the top cover, and then remove the output tray, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, and right cover. **Refer to DISASSEMBLY/REASSEMBLY > points to Note on Disassembly and Reassembly > External Cover.**
- 2) Turn the gear[1] of the purge unit[3] in the direction of the arrow. The cap[5] and lock pin[4] move down, allowing you to move the carriage[2].

F-4-148

2. Moving the Wiper Unit

- 1) Open the top cover, and then remove the output tray, right circle cover, right upper cover, operation panel, mist filter, filter cover, filter, and right cover. **Refer to DISASSEMBLY/REASSEMBLY > points to Note on Disassembly and Reassembly > External Cover.**
- 2) To move the wiper unit[3], turn the gear[1] of the purge unit[2] in the direction of the arrow.

F-4-149

4.3.20 Opening the Cap/Moving the Wiper Unit

iPF5100

This section explains how to open the cap and ink supply valve manually.

To move the carriage with the power off, you need to release the carriage lock pin and cap manually.

1. Opening the Cap/Releasing the Carriage Lock Pin

- 1) Remove the right circle cover, mist filter. Refer to **DISASSEMBLY/REASSEMBLY > points to Note on Disassembly and Reassembly > External Cover**.
- 2) Turn the gear [1] of the purge unit [3] in the direction of the arrow from the hole [6] of the right cover. The cap [5] and lock pin [4] move down, allowing you to move the carriage [2].

F-4-150

F-4-151

2. Moving the Wiper Unit

- 1) Open the top cover, and then remove the roll feed unit, output guide, right circle cover, right upper cover, operation panel, mist filter, exhaust filter, right cover, right front cover, cover guide, cover plate(right). Refer to **DISASSEMBLY/REASSEMBLY > points to Note on Disassembly and Reassembly > External Cover**.
- 2) To move the wiper unit [3], turn the gear [1] of the purge unit [2] in the direction of the arrow.

F-4-152

4.3.21 Opening/Closing the Ink Supply Valve

iPF5000 / iPF5100

- 1) Open the top cover, and then remove the left circle cover and tank cover.
- 2) To open the ink supply valve, turn the cam [2] in the direction of the arrow and press the link [1].

F-4-153

- If the tube is full of ink, releasing the printhead lock lever with the ink supply valve open can cause the ink to flow back to the ink supply unit, resulting in leakage of ink from the ink supply needle.
 - If the ink supply valve is held open due to a problem such as a valve motor error(E02D06), remove the valve motor unit(refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Ink Tank Unit) and close the ink supply valve.
-

4.3.22 Draining the Ink

iPF5000 / iPF5100

There are two methods of removing the ink, a manual method and an automatic method.

When the ink is drained, the ink inside the ink passage totaling about 72g (about 6g x 12 colors) is drained as waste ink.

To prevent ink leakage, be sure to drain the ink inside the ink passage before transporting the printer again.

1. Automatic ink drainage

To perform "automatic ink drainage", select "Main Menu" > "Maintenance" > "Move Printer".

Perform automatic ink drainage again if a power outage or other cause shuts off the power during the operation for automatic ink drainage.

2. Manual Ink Drainage

Perform manual ink drainage when the printer cannot be powered due to a printer's electrical part failure, firmware error, or power supply problem.

Manual Ink Drainage Procedure

- 1) Open the top cover, and then remove the left and right circle covers, tank cover, right upper cover, operation panel, mist filter, filter cover, filter, and right cover.
Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > External Cover.
- 2) Move the carriage onto the platen. **Refer to DISASSEMBLY/REASSEMBLY > Points to Note on Disassembly and Reassembly > Opening the Cap/Move the Wiper Unit.**
- 3) Turn the cam [2] in the direction of the arrow, and then press the link [1] to open the ink supply valve.

F-4-154

- 4) Release both printhead fixer levers [1] to flow the ink from inside the ink tube to the sub-buffer of the ink tank unit.

F-4-155

The sub-buffer can contain 22g of ink. About 6g of ink flows into the sub-buffer each time manual ink drainage is performed.

- 5) Make sure that the ink has been drained completely, turn the cam to close the ink supply valve.

4.4 Applying the Grease

4.4.1 Applying the Grease

iPF5000 / iPF5100

Some parts require application of grease when replaced. Apply the grease(special tool) listed below.

Smear the grease lightly and evenly with a flat brush or the like.

For the printer disassembly/reassembly method, refer to "DISASSEMBLY/REASSEMBLY" and "parts catalog".

Do not apply the grease to locations in which not designated grease may cause poor print quality. Take particular care that grease do not get onto the wiper, cap, and linear scale.

No.	Location	Grease type	Quantity
1	Joint base	Molykote PG-641	Approx.6/12mg
2	Shaft cleaner/oil pad	EU-1	soaks enough.
3	Eject roller bearing	Molykote PG-641	Approx.12mg
4	Eject roller center bearing	Molykote PG-641	Approx.12mg
5	Spur cam	Molykote PG-641	Approx.20mg
6	Pick-up cam	Molykote PG-641	Approx.12mg
7	Separation cam gear	Molykote PG-641	Approx.20mg
8	Release lever	Molykote PG-641	Approx.12mg
9	Return lever arm	Molykote PG-641	Approx.12mg
10	Paper feed inner guide	Molykote PG-641	Approx.12mg
11	Pinch roller unit release shaft	Molykote PG-641	Approx.12mg

4.5 Adjustment and Setup Items

4.5.1 Adjustment Item List

iPF5100

The following adjustment procedures need to be performed when parts have been replaced or removed and then reinstalled:

T-4-1

Adjustment item	Adjustment timing
Multi sensor recalibration	Multi sensor replacement/removal
	Carriage unit replacement/removal
Adjusting wire roller	Wire guide replacement/removal
	Carriage unit replacement/removal
Head management sensor recalibration	Head management sensor replacement/removal
	Carriage unit replacement/removal

4.5.2 Procedure after Replacing the Feed Roller HP Sensor or Feed Roller Encoder

iPF5000

Procedure after replacing the feed roller HP sensor or feed roller encoder

Feed roller eccentricity is factory-adjusted (correction of variation in the paper feed amount per rotation). It is necessary to adjust feed roller eccentricity after replacing the feed roller HP sensor or feed roller encoder.

In the service mode, perform automatic adjustment of feed roller eccentricity.

Service mode : SERVICE MODE > ADJUST > PRINT PATTERN > LF TYNING

Media type : Photo glossy paper

Media size : Media having a width equal to or larger than that of A2-size paper

4.5.3 Procedure after Replacing the Carriage Unit or Multi Sensor

iPF5000 / iPF5100

a) Multi Sensor Recalibration

Since multi sensors have individual electrical specificity, the following are recalibrated at the factory, namely, the optical axis of the sensor, the sensor gain for measuring the printhead height and sensor reproduction. Accordingly, carry out the following adjustments in the service mode whenever replacing the carriage unit or multi sensor.

- Service mode : SERVICE MODE > ADJUST > GAP CALIB.

- Service mode : SERVICE MODE > ADJUST > PRINT PATTERN > OPTICAL AXIS

Media type : Photo glossy paper

Media size : Media having a width equal to or larger than that of A2-size paper

The multi sensor reference plate must be replaced at the same time whenever the carriage or the multi sensor is being replaced.

b) Adjusting the wire roller

To prevent the wire roller mounted on the carriage from contacting the duct and others during carriage operation, perform the following adjustment whenever you have removed or replaced the carriage unit. This adjustment is not required when you have replaced only the multi sensor.

- * Make adjustments with the carriage lock released.
- * Make adjustments with the tube disconnected from the tube guide.

- 1) Remove the ink tube from the wire guide.
- 2) Loosen the two screws[1]
- 3) Turn the gear[2] until the lift cam flag[3] reaches the position shown below.
 - * Bottom position where the sensor[4] light is blocked by the flag (lowest position to which the carriage unit descends)

F-4-166

- 4) Remove clip [1] and roller retainer [2] from the carriage wire tool.

F-4-167

- 5) Install carriage wire tool [1] in position with its leaf spring being attached to the top of mist fan [2].

F-4-168

- 6) Moving the carriage, adjust the height of the wire guide to bring its roller [1] into contact with the top of carriage wire tool [2].

F-4-169

- 7) Secure roller retainer [1] with clip [3] in contact with the top of roller [2].

F-4-170

8) Retighten two screws [1] loosened in Step 2) to secure the wire guide.

F-4-171

9) Pass the ink tubes through the wire guides.

4.5.4 Procedure after Replacing the Head Management Sensor

iPF5000 / iPF5100

Since the distance between the head management sensor and the carriage unit varies among printers, the optical axis is factory-adjusted to adjust the non-discharging detection position. When you have replaced the head management sensor or performed assembly/reassembly of surrounding parts that can change the distance between the head management sensor and the carriage unit, readjustment is required. Perform the readjustment in the service mode.

Service mode : SERVICE MODE > ADJUST > NOZZLE CHK POS.

- After supplies have been replaced, execute [INITIALIZE] > [PARTS COUNTER] > [PARTS xx] in service mode to initialize (clear) the parts counter information.

5.3 Periodic Maintenance

5.3.1 Periodic Maintenance

iPF5000

T-5-4

Level	Periodic maintenance
User	Cleaning of ink mist and other substances
Service personnel	None

5.3.2 Periodic Maintenance

iPF5100

T-5-5

Level	Periodic maintenance
User	Cleaning of ink mist and other substances(about once each month)
	Spur cleaning
Service personnel	None

a) Printer cleaning

To keep up with print quality and prevent troubles, clean the printer about once each month.

- 1) Wipe the external surfaces of the printer with a cloth moistened with water and then wrung tight and then dry them finally with a dry cloth.

F-5-1

- 2) Press the [MENU] button to display the main menu.
- 3) Press the ▲ and ▼ buttons to select [Maintenance] and then press the ► button.
- 4) Press the ▲ and ▼ buttons to select [Platen Cleaning] and press the ► button.
- 5) Press the ▲ and ▼ buttons to select [Yes] and press [OK] button.
- 6) Open the top cover.
- 7) If chad has deposited on suction port [1] on the platen or in borderless printing ink receiving channel [2], wipe it off with the cleaner brush.

F-5-2

MEMO:

Rinse the cleaner brush with water when it gets dirty.

- 8) Wipe off dirt inside the top cover with a cloth moistened with water and then wrung tight. Wipe off ink smears from the entire surface of the platen, the pinch roller unit, borderless printing ink receiving channel and else.

F-5-3

- Do not dry the interiors of the top cover with a dry cloth. Electrostatic charges could make the internal components susceptible to dirt, resulting in degraded print quality.
- Do not use flammable solvents, such as thinner and benzine, on the printer. Solvents coming into contact with any electrical parts inside the printer could result in fires or electrical shock hazards.
- Do not touch linear scale [1] and carriage shaft [2].

F-5-4

- 9) Remove the roll feed unit and fold plain paper [1] two to three times and then insert through the printer rear into the underside [2] of the pinch roller unit to wipe off dirt on the pinch roller unit.

F-5-5

b) Spur cleaning

If white dots appear about 1mm apart in the paper feed direction, clean the spur[1].
To clean the spur[1], use the cleaning sheet bundled with the unit.

F-5-6

- Do not fold the cleaning sheet.
- Do not use a cleaning sheet with rugged edges or a significantly folded cleaning sheet.
- If the cleaning sheet is warped, flatten it before use.
- To cancel cleaning, press the [STOP] button.

- 1) Press the [MENU] button to display the main menu.
 - 2) Press the ▲ and ▼ buttons to select [Maintenance] and press the ► button.
 - 3) Press the ▲ and ▼ buttons to select [Spur Cleaning] and press the ► button.
 - 4) Press the ▲ and ▼ buttons to select [Yes] and press the [OK] button.
- If roll media are fed, they are ejected automatically.
- 5) Open the paper tray cover.
 - 6) Pinching width guide [1], move it to the leftmost end.

F-5-7

- 7) Take the cleaning sheet out of the bag.

Keep the bag in a safe place, because it is used for cleaning sheet.

8) Set a cleaning sheet at the cleaning point at paper tray top loading port, in landscape direction, blank side up. Insert the cleaning sheet into position until it lightly hits the end.

F-5-8

MEMO:

If the cleaning position exceeds the sheet size, perform cleaning in several sessions, each with a varied cleaning sheet setting position.

F-5-9

9) Press the [OK] button to start cleaning.

Cleaning takes about 1 minute 30 seconds to complete.

10) When the cleaning session completes, store the cleaning sheet in the bag.

11) Close the paper tray cover.

6.4 Service Tools.....	6-57
6.4.1 Tool List.....	6-57

6.1 Troubleshooting

6.1.1 Outline

6.1.1.1 Outline of Troubleshooting

iPF5000 / iPF5100

1. Outline

Troubles subject to troubleshooting are classified into those shown on the display (warning, error, and service call) and those not shown on the display.

2. Precautions for Troubleshooting

- 1) Check the environmental conditions and the media used for printing.
- 2) Before performing troubleshooting, make sure that all connectors and cables are connected properly.
- 3) When servicing the printer with the external cover removed and the AC power supplied, be extremely careful to avoid electric shock and shorting electrical devices.
- 4) In the following sections, the troubleshooting steps are described such that the component related to the most probable cause of the problem will be repaired or replaced first, being followed by components with less problem probability. If multiple components have the same problem probability, the steps are described begging with the easiest one.
After performing each step, check to see if the problem has been resolved by making test prints. If the problem persists, proceed to the next step.
- 5) After completion of the troubleshooting, check that all connectors and cables have been reconnected and screws have been tightened firmly.
- 6) Whenever you have performed replacement or repair services, make test prints to check whether the problem has been resolved.

6.1.2 Troubleshooting When Warnings Occur

6.1.2.1 Ink Lvl: Chk XX (1000,1001,1002,1003,1004,1005,1006,1008,1009,100A,100B,100C)

iPF5000

XX stands for an ink name.

When a warning occurs, no code number is displayed. To view the warning history, select SERVICE MODE > DISPLAY > WARNING.

<Cause>

The electrodes attached to the hollow needle in the ink tank unit has detected that the ink level lowered below the specified one.

<Probable problem locations>

Ink tank, ink tank unit, main controller

<Remedy>

1. Check the ink level.
2. Replace the ink tank.
3. Check the connector of the ink tank unit.
4. Replace the ink tank unit.
5. Replace the main controller.

6.1.2.2 MTCart Full Soon (1100)

iPF5000

<Cause>

The maintenance cartridge is nearly full of waste ink (about 80% of the total capacity of the maintenance cartridge).

<Probable problem locations>

Maintenance cartridge, main controller

<Remedy>

1. Maintenance cartridge
Select SERVICE MODE > COUNTER > PRINTER > 1-INK to check the free space in the maintenance cartridge. If there is almost no free space, replace the maintenance cartridge.
2. Replace the main controller

6.1.2.3 Mist Full Soon (1101)

iPF5000

<Cause>

The waste ink in the waste ink box is nearly full (about 97% of the total capacity).

<Probable problem locations>

waste ink box, main controller

<Remedy>

1. Replace the waste ink box.
After replacing the waste ink box, select SERVICE MODE > INITIALIZE > PARTS COUNTER > PARTS VI to reset the waste ink counter.
2. Replace the main controller

6.1.2.4 GARO W12xx: xx stands for digits (1221,1222,1223,1225,1231,1232,1233,1234,1235)

iPF5000

<Cause>

The GARO command was erroneous during data reception.

<Probable problem locations>

Operation error, main controller

<Remedy>

1. Check the operation method and print again.
2. Replace the main controller.

6.1.2.5 Feed Limit... (100F)

iPF5000

<Cause>

The main controller has detected that the roll media was fed by the maximum amount in the manual feed mode.
Maximum feed amount in reverse feed mode: Printing standby position (on feed roller)

<Probable problem locations>

Main controller

<Remedy>

1. Replace the main controller.

6.1.2.6 Check printed document.(1010)

iPF5000

<Cause>

Many nozzle on printhead did not eject ink.

<Probable fault location>

Printhead

<Countermeasure>

1. The printhead is cleaned.
2. Replace the printhead.

6.1.3 Troubleshooting When Errors Occur

6.1.3.1 01800500-1012/01800500-1013 Defective printhead nozzle

iPF5000

<Cause>

Many non-discharging nozzles of the printhead(L) were detected.
Many non-discharging nozzles of the printhead(R) were detected.

<Probable fault location>

Printhead or head management sensor

<Countermeasure>

1. Clean the printhead.
2. Replace the printhead.
3. Replace the head management sensor.

6.1.3.2 03010000-200C/03010000-2017/03010000-2018/03016000-2010 Multi sensor error

iPF5000

<Cause>

When media was fed, the multi sensor could not detect the media width.
When the right edge of media was detected, the multi sensor detected that the media had been loaded at a wrong position.
When the leading edge of media was to be detected, the multi sensor could not detect the leading edge of media.
When media was fed, the multi sensor detected media smaller than the specified size.
When media was fed, the multi sensor detected media larger than the specified size.
When media was fed, the multi sensor detected skew greater than the specified one.
When media was fed, the multi sensor could not detect the right edge of media.
When media was fed, the multi sensor could not detect the left edge of media.

<Probable fault location>

Media, media loading method, paper path, multi sensor, carriage PCB, or main controller PCB

<Countermeasure>

1. Media check
If there is any print or stain in the detection area on the media or the media size is not the specified one, replace the media.
2. Media loading position check
If the media loading position is wrong, load the media again.
3. Visual check
Remove foreign substances from multi sensor if any.
4. Multi sensor
Select [SERVICE MODE]>[DISPLAY]>[SYSTEM]>[SIZE CR] to check the value read by the multi sensor. If the value is wrong, replace the multi sensor.
5. Cable continuity check
If continuity of the cable between the head relay PCB and the carriage relay PCB is abnormal, replace the cable.
6. Replace the Carriage PCB
7. Cable continuity check
If continuity of the cable between the carriage PCB and the main controller PCB is abnormal, replace the cable.
8. Replace the main controller PCB.

6.1.3.3 03010000-200D Cut sheet end cannot be detected

iPF5000

<Cause>

When cut media was fed by the specified length, the media sensor could not detect the trailing edge of the cut media.
During printing, the media sensor detected the trailing edge of the cut media at the position different from that detected during cut media feed.

<Probable fault location>

Paper path, media sensor, or main controller PCB

<Countermeasure>

1. Visual check
Remove foreign substances from the paper path and media sensor if any.
If the paper feed surface or moving part of the paper path is damaged or deformed, replace the paper path.
2. Media sensor
Check the media sensor for normal operation. If the operation is abnormal, replace the media sensor.
3. Cable continuity check
If continuity of the cable between the media sensor and the main controller PCB is abnormal, replace the cable.
4. Replace the main controller PCB.

6.1.3.4 03010000-2820/03010000-2821/03010000-2822/03010000-2823/03130031-2F32/03010000-2F33 Adjustment error

iPF5000

<Cause>

Auto head alignment selected from the user menu could not be carried out because the alignment pattern read result was NG.
Auto LF adjustment selected from the user menu or in the service mode could not be carried out because the adjustment pattern read result was NG.
Decentering correction selected in the service mode cannot be carried out because the correction pattern read result was NG.
Auto LF adjustment selected from the user menu or in the service mode could not be carried out because the head check pattern read result was NG.

When adjustment has been carried after selecting [SERVICE MODE]>[ADJUST]>[PRINT PATTERN]>[OPTICAL AXIS] or [SERVICE MODE]>[ADJUST]>[PRINT PATTERN]>[LF TUNING] in the service mode, check that photo glossy paper is used.

<Probable fault location>

Operation method, printhead, multi sensor, carriage PCB, or main controller PCB

<Countermeasure>

1. Check whether the media type selected on the operation panel is the same as the type of the media used to print the adjustment pattern.
If they are different, retry adjustment using the media of the type selected on the operation panel.
2. If ink bleeds greatly, change the media.
3. Carry out head cleaning, and retry adjustment. If the adjustment result is poor, replace the printhead.
4. Replace the multi sensor, and then retry adjustment.
5. Cable continuity check
If continuity of the cable between the multi sensor and the main controller PCB is abnormal, replace the cable.
6. Replace the carriage PCB.
7. Cable continuity check
If continuity of the cable between the carriage PCB and the main controller PCB is abnormal, replace the cable.
8. Replace the main controller PCB.

6.1.3.5 03010000-2E1F/03060000-2E14/03061000-2E15/03060000-2E16/03060200-2E03/03060200-2E0B/03060A00-2E00/03060A00-2E01/03860002-2E0A Path mismatch error

iPF5000

<Cause>

The size of the media used to print the adjustment pattern was smaller than the specified one.
No roll media was loaded when data was received with roll media specified as a media type.
No roll media was loaded when test printing.
No cut sheet was loaded in the cassette when data was received with cut sheet specified as a media type.
Data requiring roll media was received when cut sheet was loaded.
Data requiring cut sheet was received when roll media was loaded.
No roll media was loaded when data was different from the size of the actually loaded media.
The type of the loaded media was different from the media type specified using the driver.
The size of the loaded media in the cassette was different from the media size specified using the driver.

<Probable fault location>

Media type or main controller PCB

<Countermeasure>

1. Media check
Check the loaded media. If the media type is different from that required by the send data, no media is loaded, or the size of the loaded media is not the specified one, load correct media.
2. Replace the main controller PCB.

6.1.3.6 03010000-2E25/03010000-2E27 Paper feed/delivery jam error

iPF5000

<Cause>

During paper feed or delivery, paper jammed or paper was fed improperly.
During printing, paper was fed out of the way.

<Probable fault location>

paper path, media sensor, or main controller

<Countermeasure>

1. Visual check
Remove foreign substances from the paper path and media sensor if any.
If the paper feed surface or moving part of the paper path is damaged or deformed, replace the paper path.
2. Media sensor

- Select [SERVICE MODE]>[I/O DISPLAY] to check the media sensor for normal operation. If the operation is abnormal, replace the media sensor.
3. Cable continuity check
If continuity of the cable between the media sensor and the main controller PCB is abnormal, replace the cable.
 4. Replace the main controller PCB.

6.1.3.7 03030000-2E21 IEEE1394 error

iPF5000

<Cause>

The IEEE1394 interface is faulty.

<Probable fault location>

IEEE1394 interface board or main controller PCB.

<Countermeasure>

1. Turn off the printer, and then turn it on again.
2. IEEE1394 interface board
Remove the IEEE1394 interface board, nstall it again, and then turn on the printer, If the trouble persists, replace the IEEE1394 interface board.
3. Replace the main controller PCB.

6.1.3.8 03060A00-2E0E Roll media unit uninstallation

iPF5000

<Cause>

The auto roll feed unit cannot be detected.

<Probable fault location>

Roll feed unit PCB, connector, or main controller PCB

<Countermeasure>

1. Cable continuity check
If continuity of the cable between the roll feed unit PCB and the connector is abnormal, replace the cable.
2. Cable continuity check
If continuity of the cable between the connector and the main controller PCB is abnormal, replace the cable.
3. Replace the roll feed unit PCB.
4. Replace the connector.
5. Replace the main controller PCB.

6.1.3.9 03060A00-2E1B Roll media end error

iPF5000

<Cause>

During printing or roll media feed, the media sensor detected the end of the roll media.

<Probable fault location>

Roll media, roll media sensor, roll feed unit PCB, or main controller PCB.

<Countermeasure>

1. Roll media
If roll media is used up, load new roll media.
2. Roll media sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the media sensor.
3. Cable continuity check
If continuity of the cable between the roll media sensor and the roll feed unit PCB is abnormal, replace the cable.
4. Replace the roll feed unit PCB.
5. Cable continuit check
If continuity of the cable between the roll feed unit PCB and the main controller PCB is abnormal, replace the cable.
6. Replace the main controller PCB.

6.1.3.10 03130031-291B Lift home position error

iPF5000

<Cause>

The Lift home position could not be detected within the specified time.

<Probable fault location>

Lift drive unit, lift cam sensor, lift motor, or main controller PCB

<Countermeasure>

1. Visual check
Remove foreign substances from the lift drive unit if any.
2. Lift cam sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the lift cam sensor
3. Cable continuity check
If continuity of the cable between the lift cam sensor, lift motor and main controller PCB is abnormal, replace the cable.
4. Replace the lift motor.
5. Replace the main controller PCB.

6.1.3.11 03130031-291D Supr cam sensor error

iPF5000

<Cause>

It failed in the detection of the spur cam sensor.

<Probable fault location>

Spur unit, spur cam sensor, or main controller PCB

<Countermeasure>

1. Visual check
Remove foreign substances from the spur unit if any.
2. Spur cam sensor
Select [SEVECE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the feed roller HP sensor.
3. Cable continuity check
If continuity of the cable between the spur cam sensor and the main controller PCB is abnormal, replace the cable.
4. Replace the spur motor.
5. Replace the spur unit.
6. Replace the main controller PCB.

6.1.3.12 03130031-2E23 Cutter unit breakdown

iPF5000

<Cause>

Abnormality occurred in the cutter unit.

<Probable fault location>

Cutter unit, Cutter HP sensor, cutter right position sensor, cutter lift sensor, cutter motor, cutter driver PCB, or main controller PCB

<Countermeasure>

1. Visual check
Remove foreign substances from the cutter unit if any.
2. Cutter home position sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the cutter home position sensor.
3. Cutter right position sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the cutter right position sensor.
4. Cutter lift sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the cutter lift sensor.
5. Cable continuity check
If continuity of the cable between the cutter HP sensor, cutter right position sensor, cutter lift sensor, cutter motor and cutter driver PCB is abnormal, replace the cable.
6. Replace the cutter motor.
7. Replace the cutter driver PCB.
8. Replace the cutter unit.
9. Cable continuity check
If continuity of the cable between the cutter driver PCB and the main controller PCB is abnormal, replace the cable.
10. Replace the main controller PCB.

6.1.3.13 03130031-2F13 A/D Converter external trigger output stopped

iPF5000

<Cause>

Defective main controller PCB

<Probable fault location>

Main controller PCB

<Countermeasure>

1. main controller PCB

6.1.3.14 03130031-2F14 ASIC Register cannot be written.

iPF5000

<Cause>

A main controller PCB firm ware error occurred.

<Probable fault location>

main controller PCB

<Countermeasure>

1. Turn off the printer, and then turn it off again.
2. Replace the main controller PCB.

6.1.3.15 03130031-2F16 Mist fan error

iPF5000

<Cause>

Mist fan rotation could not be detected during mist fan rotation.

<Probable fault location>

Mist fan or main controller PCB

<Countermeasure>

1. Replace the mist fan.
2. Cable continuity check
If continuity of the cable between the mist fan and the main controller PCB is abnormal, replace the cable.
3. Replace the main controller PCB.

6.1.3.16 03130031-2F17 Suction fan error

iPF5000

<Cause>

When the suction fan was driven, the lock signal was detected for more the specified time.

<Probable fault location>

Suction fan or main controller PCB

<Countermeasure>

1. suction fan
Select [SERVICE MODE]>[FUNCTION]>[PLATEN FAN] to check the suction fan for normal operation. If the operation is abnormal, replace the suction fan.
2. Cable continuity check
If continuity of the cable between the suction fan and the main controller PCB is abnormal, replace the cable.
3. Replace the main controller PCB.

6.1.3.17 03130031-2F20/03130031-2F28/03130031-2F22/03130031-2F23 Defective sensor in purge unit

iPF5000

<Cause>

The pump cam sensor in the purge unit could not detect the home position of the purge motor within the specified time.

<Probable fault location>

Purge unit or main controller PCB

<Countermeasure>

1. Cable continuity check
If continuity of the cable between the pump cam sensor, pump motor and main controller PCB is abnormal, replace the cable.
2. Replace the purge unit.
3. Replace the main controller PCB.

6.1.3.18 03130031-2F24 Cutter drive time-out error

iPF5000

<Cause>

After the cutter motor was driven of the cutter unit, cutter right detection sensor or cutter HP sensor ON was not able to be detected in the regulation time.

<Probable fault location>

Cutter right position sensor, cutter HP sensor, cutter motor, cutter unit, cutter driver PCB, or main controller PCB

<Countermeasure>

1. Visual check
Remove foreign substances from the cutter unit if any.
2. Cutter right position sensor and cutter HP sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the feed roller HP sensor.
3. Cable continuity check
If continuity of the cable between the cutter right position sensor, the cutter HP sensor, the cutter motor and the cutter driver PCB is abnormal, replace the cable.
4. Replace the cutter motor.
5. Replace the cutter unit.
6. Replace the cutter driver PCB.
7. Cable continuity check
If continuity of the cable between the cutter driver PCB and the main controller PCB is abnormal, replace the cable.
8. Replace the main controller PCB.

6.1.3.19 03130031-2F25 Carriage home position error

iPF5000

<Cause>

The carriage home position could not be detected within the specified time.

<Probable fault location>

Carriage stopper, linear scale, linear encoder, carriage PCB, or main controller PCB.

<Countermeasure>

1. Visual check
Remove foreign substances from the carriage stopper, the linear scale and linear encoder if any.
2. Replace the linear scale.
3. Replace the linear encoder.
4. Cable continuity check
If continuity of the cable between the linear encoder and the carriage PCB is abnormal, replace the cable.
5. Replace the carriage PCB.
6. Cable continuity check
If continuity of the cable between the carriage PCB and the main controller PCB is abnormal, replace the cable.
7. Replace the main controller PCB.

6.1.3.20 03130031-2F26/03130031-2F27 Carriage motor error

iPF5000

<Cause>

The carriage did not operate because the carriage motor was overloaded due to a physical cause such as a jam.
The carriage motor did not reach the specified time.

<Probable fault location>

Carriage path way, carriage rail, carriage belt, linear scale, linear encoder, carriage motor, carriage PCB, or main controller PCB.

<Countermeasure>

1. Carriage pathway check
Remove foreign substances(jammed paper) from the carriage pathway if any.
2. Carriage rail
Visually check whether the carriage rail is dirty. If the carriage rail is dirty, clean it using rail cleaner.
3. Carriage belt
Visually check whether the carriage belt is loose.If the carriage belt is loose, remove it and then reinstall it.
4. Replace linear scale
5. Replace liner encoder
6. Cable continuity check
If continuity of the cable between the linear encoder and the main controller PCB is abnormal, replace the cable.
7. Replace carriage motor
8. Cable continuity check
If continuity of the cable between the carriage motor and the main controller PCB is abnormal, replace the cable.
9. Replace the carriage PCB
10. Cable continuity check
If continuity of the cable between the carriage PCB and the main controller PCB is abnormal, replace the cable.
11. Replace the main controller PCB.

6.1.3.21 03130031-2F2A Feed roller home position error

iPF5000

<Cause>

During power-on, the feed roller HP sensor could not detect that the reference of Scale that exists on encoder film area color change from transparent to black.

<Probable fault location>

Feed roller encoder film, feed roller HP sensor, feed motor, or main controller PCB

<Countermeasure>

1. Visual check
If the feed roller encoder film is damaged, replace it. Remove foreign substances from the feed roller encoder film if any.
2. Feed roller HP sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the feed roller HP sensor.
3. Cable continuity check
If continuity of the cable between the feed roller HP sensor, feed motor and the main controller PCB is abnormal, replace the cable.
4. Replace the feed motor.
5. Replace the main controller PCB.

6.1.3.22 03130031-2F2D The cassette cannot work.

iPF5000

<Cause>

The cassette cannot work.

<Probable fault location>

pressure plate arm, cassette cam sensor, cassette motor, or main controller PCB

<Countermeasure>

1. Visual check
If the pressure plate arm is abnormal, replace the pressure plate arm.
2. Cassette cam sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation, If the operation is abnormal, replace the valve motor.
3. Cable continuity check
If continuity of the cable between the cassette cam sensor, cassette motor and the main controller PCB is abnormal, replace the cable.
4. Replace the cassette motor.
5. Replace the main controller PCB.

6.1.3.23 03130031-2F2E Roll drive time-out error

iPF5000

<Cause>

The roll cam sensor home position in roll feed unit could not be detected within the specified time.

<Probable fault location>

roll cam drive unit, roll cam sensor, roll motor, Connector, roll feed unit PCB, or main controller PCB

<Countermeasure>

1. Visual check
If the gear in roll cam drive unit is abnormal, replace the gear.
2. Roll cam sensor

- Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the roll cam sensor.
3. Cable continuity check
If continuity of the cable between the roll cam sensor, roll motor and roll feed unit PCB is abnormal, replace the cable.
 4. Replace the roll motor.
 5. Replace the roll feed unit PCB.
 6. Cable continuity check
If continuity of the cable between the roll feed unit PCB and main controller PCB is abnormal, replace the cable.
 7. Replace the connector.
 8. Replace the main controller PCB.

6.1.3.24 03130031-2F3A Valve open/close error

iPF5000

<Cause>

When the ink supply valve opened or closed, valve open/closed detection sensor could not detect the valve cam rotation.

<Probable fault location>

Valve open/closed detection sensor, valve motor, or main controller PCB

<Countermeasure>

1. Visual check
Remove foreign substances from the motor, gear, and sensor of the valve open/close mechanism if any.
2. Valve open/close detection sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the valve open/close detection sensor.
3. Valve motor
Select [SERVICE MODE]>[FUNCTION]>[INK VALVE] to check for normal operation. If the operation is abnormal, replace the valve motor.
4. Cable continuity check
If continuity of the cable between the valve open/close detection sensor, valve motor and main controller PCB is abnormal, replace the cable.
5. Replace main controller PCB.

6.1.3.25 03180003-2E22 MIT error

iPF5000

<Cause>

When set to cassette paper feed "No" with MIT, the job of the cassette specification was received.

<Probable fault location>

Main controller PCB

<Countermeasure>

1. Replace the main controller PCB.

6.1.3.26 03180101-2E17 Cassette uninstallation

iPF5000

<Cause>

The cassette has come off.

<Probable fault location>

Cassette detection sensor or main controller PCB

<Countermeasure>

1. Cassette detection sensor
Select [SERVICE MODE]>[I/O DISPLAY] to check for normal operation. If the operation is abnormal, replace the cassette detection sensor.
2. Cable continuity check
If continuity of the cable between the cassette detection sensor and the main controller PCB is abnormal, replace the cable.
3. Replace the main controller

6.1.3.27 03800200-2802/03800400-2803/03800300-2801/03800201-280A/03800401-280B/03800301-2809/03800200-2804/ 03800202-2807 Printhead error

iPF5000

<Cause>

Improper installation of the printhead(L) was detected.
A checksum error was detected in the EEPROM of the printhead(L).
Unable to correct printhead(L) DI.
Printhead(L) was installed right and left and oppositely.
Improper installation of the printhead(R) was detected.
A checksum error was detected in the EEPROM of the printhead(R).
Unable to correct printhead(R) DI.
Printhead(R) was installed right and left and oppositely.

<Probable fault location>

Printhead, carriage PCB, carriage unit, or main controller PCB.

<Countermeasure>

1. Replace the printhead.
2. Cable continuity check
If continuity of the cable between the carriage PCB and the main controller PCB is abnormal, replace the cable.
3. Replace the carriage PCB.
4. Replace the carriage unit.

5. Replace the main controller PCB.

6.1.3.28 03800500-2F2F/03800500-2F30 Head management sensor error

iPF5000

<Cause>

The head management sensor detected an ink discharge error.

A sensor sensitivity error was detected during head management sensor position adjustment.

<Probable fault location>

Printhead, head management sensor, or main controller PCB

<Countermeasure>

1. Replace the printhead.

2. Visual check

Remove foreign substances from the head management sensor if any.

3. Replace the head management sensor.

4. Cable continuity check

If continuity of the cable between the head management sensor and the main controller PCB is abnormal, replace the cable.

5. Replace the main controller PCB.

6.1.3.29 03810101-2501/03810102-2502/03810103-2503/03810104-2500/03810105-2508/03810106-2506/03810107-250A/ 03810108-250C/03810109-250B/03810112-2504/03810113-2505/03810115-2509 No ink error

iPF5000

<Cause>

No ink status was detected in the ink tank.

<Probable fault location>

Ink tank, ink tank unit, or main controller PCB

<Countermeasure>

1. Replace the ink tank.

2. Replace the ink tank unit.

3. Replace the main controller PCB.

6.1.3.30 03810201-2581/03810204-2580/03810202-2582/03810203-2583/03810212-2584/03810213-2585/03810206-2586/ 03810205-2588/03810215-2589/03810207-258A/03810209-258B/03810208-258C Tank level error 1

iPF5000

<Cause>

When head cleaning was executed automatically at ink level 1, insufficiency of ink was detected.

Opening the ink tank cover recovers this error. The error recovery operation is continued until it is cancelled using the STOP key.

<Probable fault location>

Ink tank, ink tank unit, or main controller PCB

<Countermeasure>

1. Replace the ink tank.

2. Cable continuity check

If continuity of the cable between the ink tank unit and the main controller PCB is abnormal, replace the cable.

3. Replace the ink tank unit.

4. Replace the main controller PCB.

6.1.3.31 03810201-2591/03810204-2590/03810202-2592/03810203-2593/03810212-2594/03810213-2595/03810206-2596/ 03810205-2598/03810215-2599/03810207-259A/03810209-259B/03810208-259C Tank level error 2

iPF5000

<Cause>

Ink shortage was detected while printing it.

Opening the ink tank cover recovers this error. The error recovery operation is continued until it is cancelled using the STOP key.

<Probable fault location>

Ink tank, ink tank unit, or main controller PCB

<Countermeasure>

1. Replace the ink tank.

2. Cable continuity check

If continuity of the cable between the ink tank unit and the main controller PCB is abnormal, replace the cable.

3. Replace the ink tank unit.
4. Replace the main controller PCB.

6.1.3.32 03830101-2521/03830104-2520/03830102-2522/03830103-2523/03830112-2524/03830113-2525/03830106-2526/03830105-2528/03830115-2529/03830107-252A/03830109-252B/03830108-252C Ink tank is not installed.(This error occurs when the ink tank is replaced.)

iPF5000

<Cause>

When the ink tank was replaced, the closed state of the ink cover was detected with the ink tank removed.

<Probable fault location>

Operation method, ink tank, ink tank cover sensor, ink tank unit, or main controller PCB

<Countermeasure>

1. Operation check
Install the ink tank.
2. Visual check
Remove foreign substances from the ink tank contacts and ink cover sensor if any.
3. Replace the ink tank.
4. Ink tank cover sensor
Check for normal operation. If the operation is abnormal, replace the ink tank cover sensor.
5. Cable continuity check
If continuity of the cable between the ink tank cover sensor and the main controller PCB is abnormal, replace the cable.
6. Replace the ink tank unit.
7. Cable continuity check
If continuity of the cable between the ink tank unit and the main controller PCB is abnormal, replace the cable.
8. Replace the main controller PCB.

6.1.3.33 03830201-2541/03800204-2540/03830202-2542/03830203-2543/03830212-2544/03830213-2545/03830206-2546/03830205-2548/03830215-2549/03830207-254A/03830209-254B/03830208-254C Invalid ink tank ID

iPF5000

<Cause>

The installed ink tank is wrong

<Probable fault location>

Ink tank, ink tank unit, or main controller PCB

<Countermeasure>

1. Replace the ink tank.
2. Replace the ink tank unit.
3. Replace the main controller PCB.

6.1.3.34 03830301-2561/03830304-2560/03830302-2562/03830303-2563/03830312-2564/03830313-2565/03830306-2566/03830305-2568/03830305-2568/03830315-2569/03830307-256A/03830309-256B/03830308-256C Ink tank EEPROM error

iPF5000

<Cause>

An ink tank EEPROM checksum error was detected.

<Probable fault location>

Ink tank, ink tank unit, or main controller PCB

<Countermeasure>

1. Replace the ink tank.
2. Replace the ink tank unit.
3. Cable continuity check
If continuity of the cable between the ink tank unit and the main controller PCB is abnormal, replace the cable.
4. Replace the main controller PCB.

6.1.3.35 03841001-2819/03841201-2816/03841201-2817/03841101-2818/01841001-281B Maintenance cartridge error

iPF5000

<Cause>

The maintenance cartridge is full.
The maintenance cartridge does not have the free space for various types of cleaning.
No maintenance cartridge is installed.
The EEPROM of the maintenance cartridge is abnormal.
A maintenance cartridge ID error occurred.

<Probable fault location>

Maintenance cartridge, maintenance cartridge relay PCB, or main controller PCB

<Countermeasure>

1. Replace the maintenance cartridge.
2. Replace the maintenance cartridge relay PCB.
3. Cable continuity check
If continuity of the cable between the maintenance cartridge relay PCB and the main controller PCB is abnormal, replace the cable.
4. Replace the main controller PCB.

6.1.3.36 03861001-2405/03861001-2406 Borderless printing error

iPF5000

<Cause>

The position where the media is loaded is not suitable for borderless printing.
The received data is not suitable for borderless printing.

<Probable fault location>

Operation method

<Countermeasure>

1. Check the operation method and retry printing.

6.1.3.37 03862000-2E09 Insufficient roll media error

iPF5000

<Cause>

The machine detected that the remaining roll media was insufficient.

<Probable fault location>

Roll media, feed roller HP sensor, feed roller encoder film, feed roller encoder, or main controller PCB

<Countermeasure>

1. Replace the roll media.
2. Feed roller HP sensor
Check for normal operation. If the operation is abnormal, replace the feed roller HP sensor.
3. Replace the feed roller encoder film.
4. Replace the feed roller encoder.
5. Replace the main controller PCB.

6.1.3.38 03870001-2015 Cut error

iPF5000

<Cause>

After roll media cutting, the multi sensor could not detect the media end.

<Probable fault location>

Media, multi sensor, cutter unit, cutter lifter unit, cutter drive unit, cutter driver PCB, carriage PCB, or main controller PCB

<Countermeasure>

1. Media check
If there is any print or stain in the detection area on the media or the media size is not the specified one, replace the media.
2. Multi sensor
Select [SERVICE MODE]>[DISPLAY]>[SYSTEM]>[SIZE CR] to check the value read by the multi sensor. If the value is wrong, replace the multi sensor.
3. Visual check
Remove foreign substances from the multi sensor, the cutter unit, the cutter lifter unit, and the cutter drive unit if any.
If the cutter unit, the cutter lifter unit, and the cutter drive unit is damaged or deformed, replace it.
4. Cable continuity check
If continuity of the cable between the multi sensor and the carriage PCB is abnormal, replace the cable.
5. Cable continuity check
If continuity of the cable between the cutter lifter unit, the cutter drive unit, and the cutter driver PCB is abnormal, replace the cable.
6. Replace the cutter driver PCB.
7. Replace the carriage PCB.
8. Replace the main controller PCB.

6.1.3.39 E194-4034 Sensor calibration error

iPF5000

<Cause>

Sensor calibration failed.

<Probable fault location>

Multi sensor, multi sensor base, carriage PCB, or main controller PCB

<Countermeasure>

1. Retry calibration in the service mode.
2. Visual check
Remove foreign substances from the multi sensor base if any.
3. Replace the multi sensor.
4. Cable continuity check
If continuity of the cable between the multi sensor and the carriage PCB is abnormal, replace the cable.
5. Replace the carriage PCB.
6. Cable continuity check
If continuity of the cable between the carriage PCB and the main controller PCB is abnormal, replace the cable.
7. Replace the main controller PCB.

6.1.4 Troubleshooting When Service Call Errors Occur

6.1.4.1 Outline

iPF5000

When a service call error occurs, turning off the Power button will not recover the error. (Occurrence of a service call is displayed again when the power is turned back on.)

This measure is taken to prevent user's recovery of the service call error and damages to the printer.

To view the service call history, select SERVICE MODE > DISPLAY > ERROR.

6.1.4.2 E141-4046 Recovery system rotation count reached 50,000.

iPF5000

<Cause>

The machine detected that the rotation count of the purge unit reached the specified value.

<Probable fault location>

Purge unit or main controller PCB

<Countermeasure>

1. Replace Purge unit.
After replacing the purge unit, select [SERVICE MODE]>[INITIALIZE]>[PARTS COUNTER] to reset the counter.
2. Replace main controller PCB.

6.1.4.3 E144-4047 Supply system's count error

iPF5000

<Cause>

The machine detected that the carriage scan count reached the specified value.

<Probable fault location>

Ink tank or main controller PCB

<Countermeasure>

1. Replace the ink tank unit.
After replacing the ink tank unit select [SERVICE MODE]>[INITIALIZE]>[PARTS COUNTER] to reset the counter.
2. Replace the main controller PCB.

6.1.4.4 E146-4001 Borderless/idle ejection/mist collection count full

iPF5000

<Cause>

The machine detected that the waste ink box, the mist fan unit or platen duct became full of ink.

<Probable fault location>

Waste ink box, mist fan unit, platen duct or main controller PCB

<Countermeasure>

1. Replace the waste ink box, mist fan unit or platen duct.
After replacing the waste ink box, mist fan unit or platen duct, select [SERVICE MODE]>[INITIALIZE]>[PARTS COUNTER] to reset the counter.
2. Replace main controller PCB.

6.1.4.5 E194-404A Non-discharge detection count error

iPF5000

<Cause>

The machine detected that the Non-discharge count error

<Probable fault location>

Head management sensor or main controller PCB

<Countermeasure>

1. Replace the head management sensor.
After replacing the head management sensor, select [SERVICE MODE]>[INITIALIZE]>[PARTS COUNTER] to reset the counter.
2. Replace the main controller PCB.

6.1.4.6 E161-403E/E196-403F Abnormally high head temperature

iPF5000

<Cause>

The printhead temperature became abnormally high.

<Probable fault location>

Printhead, carriage PCB or main controller PCB.

<Countermeasure>

1. Start up the printer in the service mode, and then replace the printhead.

- 2. Replace the carriage PCB.
- 3. Replace the main controller PCB.

6.1.4.7 E196-4040/E196-4041/E196-4042/E196-4045/E196-4049 main controller PCB error

iPF5000

<Cause>
The main controller PCB is defective.

<Probable fault location>
Firmware or main controller PCB

<Countermeasure>
1. Upgrade the firmware.
2. Replace the main controller PCB.

6.1.4.8 E198-401C/E198-401D/E198-401E RTC error

iPF5000

<Cause>
The RTC of the main controller is not found.
The battery capacity is low.

<Probable fault location>
Lithium battery or main controller PCB.

<Countermeasure>
1. Start up the printer in the service mode, and then turn off the power.
2. Replace the lithium battery.
3. Replace the main controller.

8	ROLL_OUTBM	OUT	Roll motor power supply BM

6.3 Version Up

6.3.1 Firmware Update Tool

iPF5000 / iPF5100

Use of the following tools allows you to update the firmware of the main controller incorporated in the printer.

- GARO Firmware Update Tool
- L Printer Service Tool

1. GARO Firmware Update Tool

GARO Firmware Update Tool is the same as that for user.

Procedure:

- 1) Start CARO Firmware Update Tool.
- 2) Place the printer in the online mode.
- 3) Transfer the firmware data to the printer according to the instructions shown on the display.
- 4) The data shown on the LCD on the operation panel changes and the firmware is updated automatically.
- 5) When firmware update is completed, the printer will start again.

File transfer route:

USB, IEEE1394, network

2. L Printer Service Tool

Procedure:

- 1) Start L Printer Service Tool.
- 2) Place the printer in the online mode.
- 3) Specify the firmware file(jdl) and then transfer it.
- 4) The data shown on the LCD on the operation panel changes and the firmware is updated automatically.
- 5) When firmware update is completed, the printer will start again.

File transfer route:

USB, IEEE1394, network

6.4 Service Tools

6.4.1 Tool List

iPF5000 / iPF5100

T-6-81

General-purpose tools	Remarks
Long Phillips screwdriver	Inserting and removing screws
Phillips screwdriver	Inserting and removing screws
Flat-head screwdriver	Removing the E-ring
Needle-nose pliers	Inserting and removing the spring parts
Hex key wrench	Inserting and removing hexagonal screws
Flat brush	Applying grease
Lint free paper	Wiping off ink
Rubber gloves	Preventing ink stains

T-6-82

Special-purpose tools	Remarks
Carriage Wire Tool (AY3-4493-000)	Adjusting carriage wire height
Grease MOLYKOTE PG-641 (CK-0562-000)	Applying to specified locations
EU-1 (QY9-0037-000)	Soaks to specified locations

Chapter 7 SERVICE MODE

Contents

7.1 Service Mode	7-1
7.1.1 Service Mode Operation	7-1
7.1.2 Map of the Service Mode.....	7-2
7.1.3 Details of Service Mode.....	7-7
7.1.4 Sample Printout.....	7-15
7.2 Special Mode.....	7-19
7.2.1 Special Modes for Servicing.....	7-19

7.1 Service Mode

7.1.1 Service Mode Operation

iPF5000 / iPF5100

a) How to enter the Service mode

Enter the Service mode following the procedure below.

- 1) Turn off the printer.
- 2) Turn on the printer while holding down the [Paper Source] button and [Information] button.
* Keep pressing the above buttons until "Initializing" appears on the display.
- 3) "S" is displayed in the upper right corner of the display showing the version.
- 4) After display of "Online", pressing the [Menu] button displays the SERVICE MODE top menu and the MESSAGE LED flashes.

* The Service mode is added to the options in the Main menu. The Service mode can be entered even in the error status (when an error message is shown on the display) by turning the power off and then using the above key operation.

b) How to exit the Service mode

Turn off the printer.

c) Key operation in the service mode

- Selecting menus and parameters: [◀] or [▶] button
- Going to the next lower-level menu: [▲] button
- Going to the next higher-level menu: [▼] key
- Determining a selected menu or parameter: [OK] button

7.1.2 Map of the Service Mode

iPF5000 / iPF5100

The hierarchy of menus and parameters in the Service Mode is as shown below.

7.1.3 Details of Service Mode

iPF5000 / iPF5100

This section provides details of the Service mode menu.

a) DISPLAY

Displays and prints the printer information.

1) PRINF INF

Prints adjustment values in the User menu, [DISPLAY] and [COUNTER] parameters on A4-size or larger paper. When a roll media is used, the layout is optimized according to the media width.

2) SYSTEM

Displays the printer information shown below.

T-7-6

Display	Description	Unit
S/N	Serial number of printer	-
TYPE	Type setting on main controller PCB * iPF6100 is represented by 24.	-
LF TYPE	Feed roller type: 0 or 1	-
TMP	Ambient temperature	degrees C
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	mm
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	inch
SIZE CR	Detected size of loaded media (carriage scan direction)	mm
SIZE CR	Detected size of loaded media (carriage scan direction)	inch

3) HEAD

Displays the following EEPROM information of the printhead.

T-7-7

Display	Description
S/N R	Serial number of printhead R
S/N L	Serial number of printhead L
LOT R	Lot number of printhead R
LOT L	Lot number of printhead L

4) INK

Displays the numbers of days passed since installation of the following ink tanks.

T-7-8

Display	Description	Unit
BK	Number of days passed since the BK ink tank was installed	Day(s)
MBK	Number of days passed since the MBK ink tank was installed	Day(s)
C	Number of days passed since the C ink tank was installed	Day(s)
M	Number of days passed since the M ink tank was installed	Day(s)
Y	Number of days passed since the Y ink tank was installed	Day(s)
PC	Number of days passed since the PC ink tank was installed	Day(s)
PM	Number of days passed since the PM ink tank was installed	Day(s)
GY	Number of days passed since the GY ink tank was installed	Day(s)
PGY	Number of days passed since the PGY ink tank was installed	Day(s)
R	Number of days passed since the R ink tank was installed	Day(s)
G	Number of days passed since the G ink tank was installed	Day(s)
B	Number of days passed since the B ink tank was installed	Day(s)

5) WARNING

Displays the warning history (up to 20 events). The newest event has the smallest history number.

6) ERROR

Displays the error history (up to 20 events). The newest event has the smallest history number.

7) INK CHECK

Displays the history of execution of turning off the remaining ink level detection (by using the refilled ink tank) in the order of Y, PC, C, PGY, GY, BK, PM, M, MBK, R, G, and B.

0: No execution

1: Executed at least once

c) ADJUST

Performs adjustments and prints the adjustment and check patterns necessary for adjusting the printer parts.

1) PRINT PATTERN

T-7-12

Display	Description
NOZZLE 1	Prints the nozzle check pattern by single direction/ single pass without using the non-discharging back up. It is used to check for the non-discharging nozzles. - Media size: A4 - Media type: any
OPTICAL AXIS	Prints the pattern and adjusts the optical axis of the multi sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the carriage unit or multi sensor". - Media type: photo glossy paper
LF & HAKUSHA	* For Factory
SENSOR CHECK	* For Factory

LF & HAKUSYA and SENSOR CHECK are intended for factory adjustment purposes.
No adjustment by service personnel is required.

2) HEAD ADJ.

Set or initialize the registration adjustment values of each printheads.

T-7-13

Display		Description
AUTO HEAD ADJ	ROUGH	Prints the pattern for auto head adjustment (rough adjustment).
MANUAL HEAD ADJ	DETAIL	Prints the detail patterns for the manual head adjustment. After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
	BASIC	Prints the basic patterns for the manual head adjustment. After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
ADJ. SETTING	A to F	This mode is to input the registration adjustment values. It is possible to return the values to the former one by printing the status print before changing the value.
	A-1 to F-1	
	SAVE SETTINGS	Save the registration adjustment values that has been input.
RESET SETTINGS		Initialize the registration adjustment values (to 0).

3) NOZZLE CHK POS.

This mode for adjusting the optical axis of the head management sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the head management sensor".

4) GAP CLIB.

This mode measures the gap between the printhead and media by multi sensor and corrects the calibration value.

d) REPLACE**1) CUTTER**

This mode is for replacing the cutter unit.

2) L&R PRINTHEADS

Replaces printheads L and R.

e) COUNTER

Displays the life (operation frequency and time) of each unit, print counts for each media type, and else. The count values can be printed from [PRINT INF].

1) PRINTER: Counters related to product life

T-7-14

Display	Description	Unit
LIFE TTL	Cumulative number of printed media (equivalent of A4)	sheets
LIFE ROLL	Cumulative number of printed roll media (equivalent of A4)	sheets
LIFE CUTSHEET	Cumulative number of printed cut sheets (equivalent to A4)	sheets
LIFE CASSETTE	Cumulative number of printed cut sheets at cassette pick-up (equivalent to A4)	sheets
LIFE A-F	Cumulative number of printed media for environments A to F	sheets
POWER ON	Cumulative power-on time (excluding the sleep time)	Hours
W-INK	Remaining capacity of the maintenance cartridge	%
CUTTER	Number of cutting operations (count as 1 by moving back and forth)	Times
WIPE	Number of wiping operations	Times

2) CARRIAGE: Counters related to carriage unit

T-7-15

Display	Description	Unit
PRINT	Cumulative printing time	Hours
CR COUNT	Cumulative carriage scan count (count as 1 by moving back and forth)	Times
CR DIST.	Cumulative carriage scan distance (count as 1 by moving 210mm)	Times
PRINT COUNT	Cumulative print end count (count as 1 by capping)	Times

3) PURGE: Counters related to purge unit

T-7-16

Display	Description	Unit
CLN-A-1	Cumulative number of automatic cleaning 1 (normal suction) operations	Times
CLN-A-2	Cumulative number of automatic cleaning 2 (ink level adjusting) operations	Times
CLN-A-3	Cumulative number of automatic cleaning 3 (initial filling) operations	Times
CLN-A-6	Cumulative number of automatic cleaning 6 (strong normal suction) operations	Times
CLN-A-7	Cumulative number of automatic cleaning 7 (aging) operations	
CLN-A-10	Cumulative number of automatic cleaning 10 (ink filling after secondary transportation) operations	Times
CLN-A-11	Cumulative number of automatic cleaning 11 (ink filling after head replacement) operations	Times
CLN-A-15	Cumulative number of automatic cleaning 15 (dot count small suction) operations	Times
CLN-A-16	Cumulative number of automatic cleaning 16 (sedimented ink agitation) operations	Times
CLN-A-17	Cumulative number of automatic cleaning 17 (small suction) operations	Times
CLN-A-TTL	Total number of automatic cleaning operations	Times
CLN-M-1	Cumulative number of manual cleaning 1 (normal suction) operations	Times
CLN-M-4	Cumulative number of manual cleaning 4 (ink draining from head after head replacement) operations	Times
CLN-M-5	Cumulative number of manual cleaning 5 (ink draining from head and tube before transportation) operations	Times
CLN-M-6	Cumulative number of manual cleaning 6 (normal strong suction) operations	Times
CLN-M-TTL	Total number of manual cleaning operations	Times

4) CLEAR: Counters related to counter initialization

T-7-17

Display	Description	Unit
CLR-INK CONSUME	Cumulative count of ink section consumption amount clearing	Times
CLR-CUTTER EXC.	Cumulative count of cutter replacement count clearing	Times
CLR-MTC EXC.	Cumulative count of maintenance cartridge replacement count clearing	Times
CLR-HEAD L EXC.	Cumulative count of printhead L replacement count clearing	Times
CLR-HEAD R EXC.	Cumulative count of printhead R replacement count clearing	Times
CLR-UNIT A EXC.	Cumulative count of unit A(waste ink system) replacement count clearing	Times
CLR-UNIT B EXC.	Cumulative count of unit B(platen duct) replacement count clearing	Times
CLR-UNIT D EXC.	Cumulative count of unit D(carriage unit) replacement count clearing	Times
CLR-UNIT F EXC.	Cumulative count of unit F(ink supply system) replacement count clearing	Times
CLR-UNIT H EXC.	Cumulative count of unit H(purge) replacement count clearing	Times
CLR-UNIT L EXC.	Cumulative count of unit L(head management sensor) replacement count clearing	Times
CLR-UNIT P EXC.	Cumulative count of unit P(feed motor) replacement count clearing	Times
CLR-UNIT Q EXC.	Cumulative count of unit F(cassette pick-up system) replacement count clearing	Times
CLR-UNIT R EXC.	Cumulative count of unit R(spur cam) replacement count clearing	Times
CLR-UNIT V EXC.	Cumulative count of unit V(mist fan unit) replacement count clearing	Times
CLR-UNIT X EXC.	Cumulative count of unit X(multi sensor) replacement count clearing	Times
CLR-FACTORY CNT.	For factory	Times

5) EXCHANGE: Counters related to parts replacement

T-7-18

Display	Description	Unit
CUTTER EXC.	Cutter replacement count (Count of executing cutter replacement mode)	Times
MTC EXC.	Maintenance cartridge replacement count	Times
HEAD R EXC.	Printhead R replacement count	Times
HEAD L EXC.	Printhead L replacement count	Times
BOARD EXC.(M/B)	Main controller PCB replacement count	Times
UNIT A EXC.	Unit A (waste ink system) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS A])	Times
UNIT B EXC.	Unit B (waste ink system) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS B])	Times
UNIT D EXC.	Unit D (carriage unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS D])	Times
UNIT F EXC.	Unit F (ink supply system) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS F])	Times
UNIT H EXC.	Unit H (purge unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS H])	Times
UNIT L EXC.	Unit L (head management sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS L])	Times
UNIT P EXC.	Unit P (feed unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS P])	Times
UNIT Q EXC.	Unit Q (cassette pick-up system) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Q])	Times
UNIT R EXC.	Unit R (pick-up system) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS R])	Times
UNIT V EXC.	Unit V (mist fan unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS V])	Times
UNIT X EXC.	Unit V (multi sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS X])	Times

6) DETAIL-CNT: Other counters

T-7-19

Display	Description	Unit
MOVE PRINTER	Count of [Move Printer] operations	Times
N-INKCHK(XX)	XX: Ink color Count of turning off the ink remaining level detection for each color	Times
MEDIACONFIG-CNT	Count of media registered by media editor	Times

7) INK-USE1: Counters related to ink consumption

T-7-20

Display	Description	Unit
INK-USE1(XX)	XX: Ink color Cumulative consumption amount of generic ink	ml
INK-USE1(TTL)	Total amount of the cumulative consumption of generic ink	ml
N-INK-USE1(XX)	XX: Ink color Cumulative consumption amount of refilled ink	ml
N-INK-USE1(TTL)	Total amount of the cumulative consumption of refilled ink	ml

8) INK-USE2: Counters related to ink consumption

T-7-21

Display	Description	Unit
INK-USE2(XX)	XX: Ink color Consumption amount of generic ink of the currently installed ink tank.	ml
INK-USE2(TTL)	Total consumption amount of generic ink of the currently installed ink tanks	ml
N-INK-USE2(XX)	XX: Ink color Consumption amount of refilled ink of the currently installed ink tank	ml
N-INK-USE2(TTL)	Total consumption amount of refilled ink of the currently installed ink tanks	ml

9) INK-EXC: Counters related to ink tank replacement

T-7-22

Display	Description	Unit
INK-EXC(XX)	XX: Ink color Cumulative count of generic ink tank replacement	ml
INK-EXC(TTL)	Total amount of the cumulative count of generic ink tank replacement	ml
N-INK-EXC(XX)	XX: Ink color Cumulative count of refilled ink tank replacement	ml
N-INK-EXC(TTL)	Total amount of the cumulative count of refilled ink tank replacement	ml

10) MEDIA x (x: 1 to 7): Counters related to media

One to seven media types are displayed individually in order with large cumulative print area.

T-7-23

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	m2
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	m2
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	m2
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f
CASSETTE	Cumulative print area of cut sheet at cassette pick-up (metric)	m2
CASSETTE	Cumulative print area of cut sheet at cassette pick-up (inch)	Sq.f

11) MEDIA OTHER: Counters related to media

Displays the total amount of cumulative print area of the other media type than the above-mentioned

T-7-24

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	m2
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	m2
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	m2
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f
CASSETTE	Cumulative print area of cut sheet at cassette pick-up (metric)	m2
CASSETTE	Cumulative print area of cut sheet at cassette pick-up (inch)	Sq.f

12) MEDIASIZE1 ROLL: Counters related to roll media printing

T-7-25

Display	Description	Unit
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

13) MEDIASIZE2 ROLL: Counters related to roll media printing

T-7-26

Display	Description	Unit
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

14) MEDIASIZE1 CUT: Counters related to cut sheet printing

T-7-27

Display	Description	Unit
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

15) MEDIASIZE2 CUT: Counters related to cut sheet printing

T-7-28

Display	Description	Unit
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

16) HEAD DOT CNT.1: Counter related to dot count

T-7-29

Display	Description	Unit
XX	XX: Ink color Dot counts of each colors of the currently installed printhead	(x 1,000,000) dots
TTL	Total dot counts of each colors of the currently installed printhead	(x 1,000,000) dots

17) HEAD DOT CNT.2: Counter related to dot count

T-7-30

Display	Description	Unit
XX	XX: Ink color Cumulative dot counts of each colors	(x 1,000,000) dots
TTL	Total cumulative dot counts of each colors	(x 1,000,000) dots

18) PARTS CNT. : Counter related to consumable parts

T-7-31

Display	Description	Unit
COUNTER x	x: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" > "Consumable Parts") Display the status and the days passed since the counter resetting. - Status OK: Use rate (until part replacement) of all consumable parts included in each unit are below 90%. W1: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 90% or more. W2: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, but no need to stop the printer. E : Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, and the printer needs to be stopped.	Day(s)
PARTS yy	1: yy: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" > "Consumable Parts") Counter of the consumable part (current)	
	2: Life of the consumable part	
	3: Use rate until part replacement	%
	4: Counter of the consumable part (accumulate)	

f) SETTING

Make various settings.

1) Pth

Turn on or off the head pulse rank control function.

Default: OFF

2) RTC

Set RTC (real time clock) after replacing the lithium battery on the main controller PCB.

T-7-32

Display		Description
DATE	yyyy/mm/dd	Set date
TIME	hh:mm	Set time

3) PV AUTO JUDGE

Sets ink saver mode.

Default: OFF

4) CAS. PRE PRINT

Turn on to perform preprinting on cassette pickup.

Default: OFF

g) INITIALIZE

Clear the [DISPLAY] histories, [ADJUST] settings, [COUNTER] values, and other parameters.

T-7-33

Display		Description
WARNING		Initialize the history of WARNING. (All displayed contents of [DISPLAY] > [WARNING] will be initialized.)
ERROR		Initialize the history of ERROR. (All displayed contents of [DISPLAY] > [ERROR] will be initialized.)
ADJUST		Initialize the value of band adjustment (by user) and head adjustment. The automatically adjusted value will not be initialized.
W-INK		Initialize the remaining capacity (%) of the maintenance cartridge. (Clear [COUNTER] > [PRINTER] > [W-INK])
PURGE		Initialize the counter related to purge unit. (Clear [COUNTER] > [PURGE])
INK-USE CNT		Initialize the consumption amount of ink. (Clear [COUNTER] > [INK-USE2], and count up [COUNTER] > [CLEAR] > [CLR-INK CONSUME])
CUTTER-CHG CNT		Initialize the cutter unit replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [CUTTER EXC.], and count up [COUNTER] > [CLEAR] > [CLR-CUTTER EXC.])
W-INK-CHG CNT		Initialize the maintenance cartridge replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [MTC EXC.], and count up [COUNTER] > [CLEAR] > [CLR-MTC EXC.])
HEAD-CHG R CNT		Initialize the printhead R replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD R EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD R EXC.])
HEAD-CHG L CNT		Initialize the printhead L replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD L EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD L EXC.])
PARTS-CHG CNT	PARTS xx	xx: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the consumable part replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [UNIT x EXC], and count up [COUNTER] > [CLEAR] > [CLR-UNIT x EXC.])
PARTS COUNTER	PARTS xx	xx: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the counter amount of the consumable parts. (Clear [COUNTER] > [PARTS CNT.] > [PARTS x]) * After replacing the consumable part, be sure to execute this menu.

7.1.4 Sample Printout

iPF5100

a) PRINTINF

A sample printout that is produced by executing [SERVICE MODE] > [DISPLAY] > [PRINTINF] is shown below, along with instructions about how to interpret it.

7.2 Special Mode

7.2.1 Special Modes for Servicing

iPF5000 / iPF5100

This printer supports the following special modes in addition to the service mode:

- **PCB replacement mode**
 - **Download mode**
 - **Counter display mode**

1. PCB replacement mode

This mode is used when replacing the main PCB or MC relay PCB.

By executing this mode,

- Backup data of the settings and counter values stored in the MC relay PCB are moved to the new main PCB.
- The data such as the settings and counter values are copied to the MC relay PCB.

a) Entering the PCB replacement mode

Follow the same procedure as that for entering the service mode.

(With the "Paper Source" button and "Information" button pressed down, turn on the "Power" button.)

When the printer starts up, compare the serial number memorized in the main PCB's EEPROM with that memorized in the MC relay PCB's EEPROM. If they do not match, or no serial number is memorized in either EEPROM, enter the PCB replacement mode.

While you are in the PCB replacement mode, the MESSAGE LED, roll media LED, and ONLINE LED are lit.

b) Procedure

Select "CPU BOARD" or "MC BOARD" using the [◀] and [▶] buttons, and then press the [OK] button to determine it.

- CPU BOARD

Select this after replacing the main PCB.

The data in the MC relay PCB is copied to the main PCB.

- MC BOARD

Select this before replacing the main PCB.

The data in the main PCB is copied to the MC relay PCB.

Use this when the MC relay PCB is a new one.

c) Exiting the PCB replacement mode

Turning off the Power button of the printer allows you to exit the PCB replacement mode.

For details on how to replace the PCB, see Parts Replacement Procedure > Disassembly/Reassembly > Points to Note on Disassembly and Reassembly > Boards.

2. Download mode

Use this mode only when updating the firmware without performing initialization.

a) Entering the download mode

1) Turning off the Power button of the printer.

2) With the "Stop" and "Information" buttons pressed down, turn on the Power button of the printer.

* Keep pressing the above buttons until "Initializing" appears on the display.

b) Procedure

When "Download Mode/Send Firmware" is shown on the display, transfer the firmware.

When downloading of the firmware is completed, the printer is turned off automatically.

3. Counter display mode

Use this mode to view only printer counter information.

a) Invoking counter display mode

1) Press the [MENU] button to keep [Information] > [System Info] selected.

2) Press the [▲] button while holding down the [MENU] button + [OK] button to invoke counter display mode.

b) How to view counter display mode

- S/N: Unit serial number

- CNT: Number of copies printed in A4 terms (unit: copies)

Chapter 8 ERROR CODE

Contents

8.1 Outline..... 8-1

 8.1.1 Outline..... 8-1

8.2 Error Table 8-1

 8.2.1 Error Code List 8-1

8.3 Sevice Call Table 8-4

 8.3.1 Service Call Errors..... 8-4

8.1 Outline

8.1.1 Outline

iPF5000 / iPF5100

The printer indicates errors using the display and LEDs.

If an error occurs during printing, the printer status is also displayed on the status monitor of the printer driver.

The following three types of errors are displayed on the display:

- Warning

Status where the print operation can be continued without remedying the cause of the problem. This can, however, adversely affect the printing results.

- Error

Status where the print operation is stopped, and the regular operation cannot be recovered until the cause of the problem is remedied.

- Service call error

When a service call error occurs, the error is not cleared and the error indication remains on the operation panel even if the printer is powered off and on again. (Occurrence of the service call error is indicated again at power-on.)

This measure is taken to prevent user's recovery of the service call error and damages to the printer.

Service call errors can be cleared, however, by starting up the printer in the service mode.

For how to take actions against warnings and errors, refer to "Troubleshooting".

Overview of warnings and error codes

T-8-1

Code*	Diagnosis
0181010x-100x	Ink warning
01841001-1100	Waste ink warning
0134122x-103x	GARO warning
01800500-1010	Printhead warning
03xxxxxx-20xx,24xx	Media feeding error Data mismatch error
03xxxxxx-2Exx	Cover open error
03xxxxxx-25xx	Ink error
03xxxxxx-280x	Printhead error
03xxxxxx-281x	Maintenance cartridge error
03xxxxxx-282x	Adjustment error
03xxxxxx-2Fxx,26xx	Head management sensor unit error Other errors
Exxx-40xx	Service call error

* "x" stands for a numeric or letter.

8.2 Error Table

8.2.1 Error Code List

iPF5000 / iPF5100

*The codes correspond to the numbers shown on the DISPLAY in the service mode.

T-8-2

Code*	Description
01800500-1012	Many nozzle on printhead(R) did not inject ink
01800500-1013	Many nozzle on printhead(L) did not inject ink
03010000-200C	Media leading edge not detected
03010000-200D	Cut sheet end cannot be detected
03010000-2017	Media right edge not detected
03010000-2018	Media left edge not detected
03010000-2820	Head resistration improper adjustment
03010000-2821	LF improper adjustment
03010000-2822	Eccentricity improper adjustment
03010000-2823	Printhead check error
03010000-2E1F	To print internal, a small form was set.
03010000-2E25	Feed error
03010000-2E27	Media became misaligned during printing
03010000-2F33	Transparent media was loaded and cannot adjust
03016000-2010	Media skewed
03030000-2E21	IEEE1394 error
03060000-2E14	Media width mismatch
03060000-2E16	Form kind and size mismatch(Only the cassette)
03060200-2E03	The cut sheet is not set in the cassette though the data of the cassette specification was received.

Code*	Description
03060200-2E0B	When hand difference cut sheet had been loaded, the data of the cassette specification was received.
03060A00-2E00	Roll media was not loaded even though the received data indicated roll media.
03060A00-2E01	When the test is printed, roll paper none.
03060A00-2E0E	Roll paper unit uninstallation
03060A00-2E1B	End of roll media
03061000-2E15	Media type mismatch
03130031-291B	Lift movement time-out
03130031-291D	Lift cam sensor detection failure
03130031-2E23	Cutter unit breakdown
03130031-2F13	A/D converter outside trigger output stop
03130031-2F14	ASIC register writing error
03130031-2F16	Mist fan error
03130031-2F17	Platen fan error
03130031-2F20	Purge motor error
03130031-2F22	Pump movement time-out
03130031-2F23	Pump cannot operate
03130031-2F24	Cutter movement time-out
03130031-2F25	Unable to detect carriage motor home position
03130031-2F26	Carriage motor driving error
03130031-2F27	Carriage motor time-out
03130031-2F28	Purge sensor error
03130031-2F2A	Feed roller HP sensor error
03130031-2F2D	Cassette driving error
03130031-2F2E	Roll media feeding motor time-out
03130031-2F32	Multi sensor error
03130031-2F3A	Valve motor error
03180003-2E22	MIT error
03180101-2E17	Cassette uninstallation
03800200-2802	Incorrect printhead(R) was installed
03800200-2804	Printhead(R) was installed right and left and oppositely.
03800201-280A	Incorrect printhead(L) was installed
03800202-2807	Printhead(L) was installed right and left and oppositely.
03800300-2801	Unable to correct Printhead(R) DI
03800301-2809	Unable to correct Printhead(L) DI
03800400-2803	Printhead(R) EEPROM error
03800401-280B	Printhead(L) EEPROM error
03800500-2F2F	No ink ejection detection error
03800500-2F30	No ink ejection detection position adjustment error
03810101-2501	No ink (Y)
03810102-2502	No ink (M)
03810103-2503	No ink (C)
03810103-2504	No ink (PM)
03810103-2505	No ink (PC)
03810104-2500	No ink (BK)
03810105-2508	No ink (GY)
03810106-2506	No ink (MBK)
03810107-250A	No ink (R)
03810108-250C	No ink (G)
03810109-250B	No ink (B)
03810115-2509	No ink (PGY)
03810201-2581	Remaining ink low (Y)
03810201-2591	Remaining ink low (Y)
03810202-2582	Remaining ink low (M)
03810202-2592	Remaining ink low (M)
03810203-2583	Remaining ink low (C)

03830213-2545	Ink tank ID error (PC)
03830215-2549	Ink tank ID error (PGY)
03830301-2561	Ink tank EEPROM error (Y)
03830301-2574	Remaining ink low (PM)
03830302-2562	Ink tank EEPROM error (M)
03830303-2563	Ink tank EEPROM error (C)
03830303-2572	Remaining ink low (M)
03830304-2560	Ink tank EEPROM error (BK)
03830304-2570	Remaining ink low (BK)
03830305-2568	Ink tank EEPROM error (GY)
03830305-2578	Remaining ink low (GY)
03830306-2566	Ink tank EEPROM error (MBK)
03830306-2576	Remaining ink low (MBK)
03830307-256A	Ink tank EEPROM error (R)
03830307-257A	Remaining ink low (R)
03830308-256C	Ink tank EEPROM error (G)
03830308-257C	Remaining ink low (G)
03830309-256B	Ink tank EEPROM error (B)
03830309-257B	Remaining ink low (B)
03830312-2564	Ink tank EEPROM error (PM)
03830312-2571	Remaining ink low (Y)
03830313-2565	Ink tank EEPROM error (PC)
03830313-2573	Remaining ink low (C)
03830315-2569	Ink tank EEPROM error (PGY)
03830315-2579	Remaining ink low (PGY)
03841001-2819	Maintenance cartridge tank full
03841001-281B	Empty capacity of the maintenance cartridge when cleaning it various is insufficient.
03841101-2818	Maintenance cartridge not installed
03841201-2816	Maintenance cartridge RRPROM error
03841201-2817	Maintenance cartridge ID error
03860002-2E0A	Manually fed cut sheet was already loaded even though received data indicated roll media
03861001-2405	The form set position is unsuitable to the print of edge none.
03861001-2406	Data is unsuitable to the print of edge none.
03862000-2E09	Roll paper running out
03870001-2015	Cut error

Code*	Description
E194-4034	Sensor calibration error(not generated in the user mode.)

8.3 Service Call Table

8.3.1 Service Call Errors

iPF5000 / iPF5100

*Codes correspond to the numbers shown on the DISPLAY in the service mode.

T-8-3

Code*	Condition detected	Action
E141-4046	Number of recovery rotations reaching 50,000 or more	Replace the purge kit.
E144-4047	Supply count error	Replace the ink supply unit.
E146-4001	Borderless/flow idle ejection/mist recovery counter full	Replace the platen duct unit.
E161-403E	Abnormal temperature rise in printhead R	Replace the printhead.
E196-4034	Multi sensor unit version error	Replace the multi sensor unit
E194-404A	Non-discharging nozzle count error	Replace the head management sensor unit
E196-403F	Abnormal temperature rise printhead L	Replace the printhead
E196-4040	Checksum error	Replace the main controller PCB
E196-4041	Flash memory erase error	Replace the main controller PCB
E196-4042	Flash memory write error	Replace the main controller PCB
E196-4045	EEPROM write error	Replace the main controller PCB
E196-404C	Serial number mismatch between boards	Retry PCB replacement mode.

Code*	Condition detected	Action
E196-404D	Machine ID mismatch between boards	Check the main controller PCB.
E198-401C	RTC error	Replace the lithium battery/Replace the main controller PCB.
E198-401D	RTC low battery error	Replace the lithium battery/Replace the main controller PCB.
E198-401E	RTC clock stop	Replace the lithium battery/Replace the main controller PCB.
E199-404B	Temperature/humidity sensor board connector out of position	Restart in service mode.
