

# Service Manual

iPF8000 series

**Canon**

## Application

This manual has been issued by Canon Inc. for qualified persons to learn technical theory, installation, maintenance, and repair of products. This manual covers all localities where the products are sold. For this reason, there may be information in this manual that does not apply to your locality.

## Corrections

This manual may contain technical inaccuracies or typographical errors due to improvements or changes in products. When changes occur in applicable products or in the contents of this manual, Canon will release technical information as the need arises. In the event of major changes in the contents of this manual over a long or short period, Canon will issue a new edition of this manual.

The following paragraph does not apply to any countries where such provisions are inconsistent with local law.

## Trademarks

The product names and company names used in this manual are the registered trademarks of the individual companies.

## Copyright

This manual is copyrighted with all rights reserved. Under the copyright laws, this manual may not be copied, reproduced or translated into another language, in whole or in part, without the written consent of Canon Inc.

***COPYRIGHT © 2001 CANON INC.***

# Symbols Used

---

This documentation uses the following symbols to indicate special information:

Symbol	Description
	Indicates an item of a non-specific nature, possibly classified as Note, Caution, or Warning.
	Indicates an item requiring care to avoid electric shocks.
	Indicates an item requiring care to avoid combustion (fire).
	Indicates an item prohibiting disassembly to avoid electric shocks or problems.
	Indicates an item requiring disconnection of the power plug from the electric outlet.
 Memo	Indicates an item intended to provide notes assisting the understanding of the topic in question.
 REF.	Indicates an item of reference assisting the understanding of the topic in question.
	Provides a description of a service mode.
	Provides a description of the nature of an error indication.

The following rules apply throughout this Service Manual:

1. Each chapter contains sections explaining the purpose of specific functions and the relationship between electrical and mechanical systems with reference to the timing of operation.

In the diagrams,  represents the path of mechanical drive; where a signal name accompanies the symbol, the arrow  indicates the direction of the electric signal.

The expression "turn on the power" means flipping on the power switch, closing the front door, and closing the delivery unit door, which results in supplying the machine with power.

2. In the digital circuits, '1' is used to indicate that the voltage level of a given signal is "High", while '0' is used to indicate "Low". (The voltage value, however, differs from circuit to circuit.) In addition, the asterisk (\*) as in "DRMD\*" indicates that the DRMD signal goes on when '0'.

In practically all cases, the internal mechanisms of a microprocessor cannot be checked in the field. Therefore, the operations of the microprocessors used in the machines are not discussed: they are explained in terms of from sensors to the input of the DC controller PCB and from the output of the DC controller PCB to the loads.

The descriptions in this Service Manual are subject to change without notice for product improvement or other purposes, and major changes will be communicated in the form of Service Information bulletins.

All service persons are expected to have a good understanding of the contents of this Service Manual and all relevant Service Information bulletins and be able to identify and isolate faults in the machine."

---

# Contents

## Chapter 1 PRODUCT DESCRIPTION

1.1 Product Overview .....	1- 1
1.1.1 Product Overview .....	1- 1
1.1.2 Product Overview .....	1- 3
1.2 Features .....	1- 5
1.2.1 Features .....	1- 5
1.2.2 Features .....	1- 5
1.2.3 Features .....	1- 5
1.2.4 Features .....	1- 5
1.2.5 Features .....	1- 6
1.2.6 Printhead .....	1- 6
1.2.7 Ink tank .....	1- 6
1.2.8 Ink tank .....	1- 8
1.2.9 Cutter Unit .....	1- 9
1.2.10 Roll holder .....	1- 9
1.2.11 Roll Holder .....	1- 9
1.2.12 Stand .....	1- 10
1.2.13 Media Take-up Unit .....	1- 11
1.2.14 Hard Disk Drive .....	1- 12
1.2.15 Hard Disk Drive .....	1- 12
1.2.16 IEEE1394 (FireWire) Board .....	1- 12
1.2.17 Consumables .....	1- 13
1.2.18 Consumables .....	1- 14
1.2.19 Consumables .....	1- 15
1.2.20 Consumables .....	1- 16
1.3 Product Specifications .....	1- 17
1.3.1 Product Specifications .....	1- 17
1.3.2 Product Specifications .....	1- 18
1.3.3 Product Specifications .....	1- 19
1.3.4 Product Specifications .....	1- 21
1.3.5 Product Specifications .....	1- 22
1.4 Detailed Specifications .....	1- 23
1.4.1 Printing mode .....	1- 23
1.4.2 Print Speed and Direction .....	1- 24
1.4.3 Print Speed and Direction .....	1- 31
1.4.4 Interface Specifications .....	1- 37
1.4.5 Interface Specifications .....	1- 38
1.5 Names and Functions of Components .....	1- 39
1.5.1 Front .....	1- 39
1.5.2 Front .....	1- 40
1.5.3 Rear .....	1- 41
1.5.4 Rear .....	1- 42
1.5.5 Top Cover (Inside) .....	1- 43
1.5.6 Top Cover (Inside) .....	1- 44
1.5.7 Carriage .....	1- 45
1.5.8 Carriage .....	1- 45
1.5.9 Ink Tank Cover (Inside) .....	1- 45
1.5.10 Ink Tank Cover (Inside) .....	1- 47
1.5.11 Ink Tank Cover (Inside) .....	1- 48
1.6 Basic Operation .....	1- 49

1.6.1 Operation Panel .....	1- 49
1.6.2 Operation Panel .....	1- 50
1.6.3 Operation Panel .....	1- 51
1.6.4 Main Menu .....	1- 52
1.6.5 Main Menu .....	1- 73
1.6.6 Display .....	1- 88
1.6.7 Menu .....	1- 89
1.6.8 Menu .....	1- 105
1.6.9 Basket Unit .....	1- 121
1.7 Safety and Precautions .....	1- 127
1.7.1 Safety Precautions .....	1- 127
1.7.1.1 Moving Parts .....	1- 127
1.7.1.2 Adhesion of Ink .....	1- 128
1.7.1.3 Electric Parts .....	1- 130
1.7.2 Other Precautions .....	1- 131
1.7.2.1 Printhead .....	1- 131
1.7.2.2 Ink Tank .....	1- 132
1.7.2.3 Handling the Printer .....	1- 133
1.7.3 Precautions When Servicing Printer .....	1- 135
1.7.3.1 Notes on the Data Stored in the Printer .....	1- 135
1.7.3.2 Confirming the Firmware Version .....	1- 135
1.7.3.3 Precautions against Static Electricity .....	1- 135
1.7.3.4 Precautions for Disassembly/Reassembly .....	1- 135
1.7.3.5 Self-diagnostic Feature .....	1- 135
1.7.3.6 Disposing of the Lithium Battery .....	1- 135

## Chapter 2 TECHNICAL REFERENCE

2.1 Basic Operation Outline .....	2- 1
2.1.1 Printer Diagram .....	2- 1
2.1.2 Printer Diagram .....	2- 1
2.1.3 Printer Diagram .....	2- 3
2.1.4 Print Signal Sequence .....	2- 4
2.1.5 Print Signal Sequence .....	2- 5
2.1.6 Print Signal Sequence .....	2- 6
2.1.7 Print Signal Sequence .....	2- 7
2.1.8 Print Driving .....	2- 8
2.1.9 Print Driving .....	2- 10
2.1.10 Print Driving .....	2- 12
2.1.11 Print Driving .....	2- 14
2.1.12 Print Driving .....	2- 16
2.2 Firmware .....	2- 18
2.2.1 Operation Sequence at Power-on .....	2- 18
2.2.2 Operation Sequence at Power-off .....	2- 19
2.2.3 Print Control .....	2- 20
2.2.4 Print Control .....	2- 20
2.2.5 Print Control .....	2- 28
2.2.6 Print Position Adjustment Function .....	2- 35
2.2.7 Head Management .....	2- 35
2.2.8 Printhead Overheating Protection Control .....	2- 35
2.2.9 Pause between Pages .....	2- 35
2.2.10 White Raster Skip .....	2- 35
2.2.11 Sleep Mode .....	2- 35
2.2.12 Hard Disk Drive .....	2- 35
2.3 Printer Mechanical System .....	2- 37
2.3.1 Outline .....	2- 37
2.3.1.1 Outline .....	2- 37

2.3.2 Ink Passage .....	2- 38
2.3.2.1 Ink Passage .....	2- 38
2.3.2.2 Ink Tank Unit .....	2- 39
2.3.2.3 Carriage Unit .....	2- 41
2.3.2.4 Printhead .....	2- 45
2.3.2.5 Purge Unit .....	2- 46
2.3.2.6 Maintenance Cartridge .....	2- 51
2.3.2.7 Air Flow .....	2- 52
2.3.3 Paper Path .....	2- 53
2.3.3.1 Outline .....	2- 53
2.3.3.2 Paper Path .....	2- 54
2.3.3.3 Cutter Unit .....	2- 56
2.4 Printer Electrical System .....	2- 57
2.4.1 Outline .....	2- 57
2.4.1.1 Overview .....	2- 57
2.4.1.2 Overview .....	2- 57
2.4.1.3 Overview .....	2- 60
2.4.2 Main Controller .....	2- 62
2.4.2.1 Main controller PCB components .....	2- 62
2.4.2.2 Main controller PCB components .....	2- 64
2.4.2.3 Main controller PCB components .....	2- 66
2.4.3 Carriage Relay PCB .....	2- 68
2.4.3.1 Carriage relay PCB components .....	2- 68
2.4.4 Head Relay PCB .....	2- 68
2.4.4.1 Head relay PCB components .....	2- 68
2.4.4.2 Head relay PCB components .....	2- 69
2.4.5 Motor Driver .....	2- 70
2.4.5.1 Media take-up PCB components .....	2- 70
2.4.6 Maintenance Cartridge Relay PCB .....	2- 70
2.4.6.1 Maintenance cartridge relay PCB components .....	2- 70
2.4.7 Power Supply .....	2- 70
2.4.7.1 Power supply block diagram .....	2- 70
2.5 Detection Functions with Sensors .....	2- 71
2.5.1 Sensors for covers .....	2- 71
2.5.2 Ink passage system .....	2- 72
2.5.3 Ink passage system .....	2- 74
2.5.4 Carriage system .....	2- 76
2.5.5 Paper path system .....	2- 78
2.5.6 Media take-up Unit .....	2- 79
2.5.7 Others .....	2- 79

## Chapter 3 INSTALLATION

3.1 Installation .....	3- 1
3.1.1 Making Pre-Checks .....	3- 1
3.1.1.1 Making Pre-Checks .....	3- 1
3.1.1.2 Making Pre-Checks .....	3- 2
3.1.1.3 Making Pre-Checks .....	3- 3
3.1.2 Unpacking and Installation .....	3- 4
3.1.2.1 Checking the Contents .....	3- 4
3.1.2.2 Checking the Contents .....	3- 6
3.1.2.3 Assembling the Stand .....	3- 8
3.1.2.4 Installing the Printer .....	3- 11
3.1.2.5 Installing the Media Take-up Unit .....	3- 13
3.1.2.6 Installing the Basket .....	3- 19
3.1.2.7 Removing Protection Materials .....	3- 23
3.1.3 Checking the Images/Operations .....	3- 25
3.1.3.1 Checking the Image and Operation .....	3- 25
3.2 Transporting the Printer .....	3- 26

3.2.1 Transporting the Printer .....	3- 26
3.2.1.1 Transporting the Printer .....	3- 26
3.2.1.2 Transporting the Printer .....	3- 39
3.2.1.3 Transporting the Printer .....	3- 52
3.2.1.4 Transporting the Printer .....	3- 65
3.2.1.5 Transporting the Printer .....	3- 78
3.2.2 Reinstalling the Printer .....	3- 91
3.2.2.1 Reinstalling the Printer .....	3- 91

## Chapter 4 DISASSEMBLY/REASSEMBLY

4.1 Service Parts .....	4- 1
4.1.1 Service Parts .....	4- 1
4.2 Disassembly/Reassembly .....	4- 2
4.2.1 Disassembly/Reassembly .....	4- 2
4.3 Points to Note on Disassembly and Reassembly .....	4- 5
4.3.1 Note: Items that should never be disassembled .....	4- 5
4.3.2 Moving the carriage manually .....	4- 5
4.3.3 Units requiring draining of ink .....	4- 5
4.3.4 External Covers .....	4- 6
4.3.5 Drive Unit .....	4- 14
4.3.6 Carriage Unit .....	4- 15
4.3.7 Carriage Unit .....	4- 20
4.3.8 Ink Tube Unit .....	4- 25
4.3.9 Feeder Unit .....	4- 27
4.3.10 Purge Unit .....	4- 28
4.3.11 Ink Tank Unit .....	4- 29
4.3.12 Linear Encoder .....	4- 32
4.3.13 Head Management Sensor .....	4- 33
4.3.14 PCBs .....	4- 34
4.3.15 PCBs .....	4- 35
4.3.16 Opening the Cap and moving the Wiper Unit .....	4- 36
4.3.17 Draining the ink .....	4- 37
4.3.18 Opening and closing ink supply valves .....	4- 38
4.3.19 Draining the ink .....	4- 39
4.4 Applying the Grease .....	4- 40
4.4.1 Applying the Grease .....	4- 40
4.5 Adjustment and Setup Items .....	4- 43
4.5.1 Adjustment Item List .....	4- 43
4.5.2 Adjustment Item List .....	4- 43
4.5.3 Procedure after Replacing the Carriage Unit or Multi Sensor .....	4- 43
4.5.4 Procedure after Replacing the Carriage Unit or Multi Sensor .....	4- 43
4.5.5 Procedure after Replacing the Feed Roller or Feed Roller Encoder .....	4- 44
4.5.6 Procedure after Replacing the Head Management Sensor .....	4- 44

## Chapter 5 MAINTENANCE

5.1 Periodic Replacement Parts .....	5- 1
5.1.1 Periodic Replacement Parts .....	5- 1
5.2 Consumable Parts .....	5- 1
5.2.1 Consumable Parts .....	5- 1
5.2.2 Consumable Parts .....	5- 2
5.2.3 Consumable Parts .....	5- 3
5.2.4 Consumable Parts .....	5- 4
5.2.5 Consumable Parts .....	5- 5
5.3 Periodic Maintenance .....	5- 6

5.3.1 Periodic Maintenance .....	5- 6
----------------------------------	------

## Chapter 6 TROUBLESHOOTING

6.1 Troubleshooting .....	6- 1
6.1.1 Outline .....	6- 1
6.1.1.1 Outline of Troubleshooting .....	6- 1
6.1.2 Troubleshooting When Warnings Occur .....	6- 1
6.1.2.1 Ink Level: Check .....	6- 1
6.1.2.2 Check maint cartridge capacity. ....	6- 1
6.1.2.3 Ink tank is empty. Replace the ink tank. ....	6- 1
6.1.2.4 No ink tank loaded. Check ink tank.....	6- 1
6.1.2.5 Close Ink Tank Cover .....	6- 2
6.1.2.6 End of paper feed. Cannot feed paper more. ....	6- 2
6.1.2.7 Paper Type Wrong.....	6- 2
6.1.2.8 GARO W12xx .....	6- 2
6.1.2.9 Check printed document. ....	6- 2
6.1.2.10 Prepare for parts replacement. Call for service.....	6- 3
6.1.2.11 Parts replacement time has passed. Call for service. ....	6- 3
6.1.3 Troubleshooting When Errors Occur .....	6- 3
6.1.3.1 03870001-2015 Cutter error .....	6- 3
6.1.3.2 03010000-200C/03010000-200E/03010000-200F/03010000-2017/03010000-2018/03016000-2010 multi sensor .....	6- 3
6.1.3.3 03031000-2E0F Upper cover sensor error .....	6- 4
6.1.3.4 03031101-2E10 Ink tank cover switch error .....	6- 4
6.1.3.5 03031000-2E11 Carriage cover sensor error .....	6- 4
6.1.3.6 03031000-2E12 Defective paper release lever .....	6- 4
6.1.3.7 03010000-2016/03010000-2E27 Paper feed error .....	6- 5
6.1.3.8 03010000-200D Cut media end error .....	6- 5
6.1.3.9 03010000-2E1F/03060000-2E14/03060A00-2E00/03061000-2E15/03063000-2E08/03860002-2E02/03860002-2E0A/ 03860002-2E0C Path mismatch error.....	6- 5
6.1.3.10 03862000-2E09 Insufficient roll media error .....	6- 5
6.1.3.11 03890000-2920 Media take-up motor error .....	6- 6
6.1.3.12 03890000-2921 Media take-up paper detection sensor error .....	6- 6
6.1.3.13 03060A00-2E1B Roll media end error .....	6- 6
6.1.3.14 03861001-2405/03861001-2406 Borderless printing error .....	6- 6
6.1.3.15 03810104-2500/03810101-2501/03810102-2502/03810103-2503/03810112-2504/03810113-2505/03810106-2506/ 03810105-2508/03810115-2509/03810107-250A/03810109-250B/03810108-250C No ink error .....	6- 6
6.1.3.16 03830104-2520/03830101-2521/03830102-2522/03830103-2523/03830112-2524/03830113-2525/03830106-2526/ 03830105-2528/03830115-2529/03830107-252A/03830109-252B/03830108-252C Ink tank is not installed. ( This error occurs when the ink tank is replaced.).....	6- 7
6.1.3.17 03800204-2540/03830201-2541/03830202-2542/03830203-2543/03830212-2544/03830213-2545/03830206-2546/ 03830205-2548/03830215-2549/03830207-254A/03830209-254B/03830208-254C Invalid ink tank ID.....	6- 7
6.1.3.18 03830304-2560/03830301-2561/03830302-2562/03830303-2563/03830312-2564/03830313-2565/03830306-2566/ 03830305-2568/03830305-2568/03830315-2569/03830307-256A/03830309-256B/03830308-256C Ink tank EEPROM error ...	6- 7
6.1.3.19 03810204-2570/03810201-2571/03810202-2572/03810203-2573/03810212-2574/03810213-2575/03810206-2576/ 03810205-2578/03810215-2579/03810207-257A/03810209-257B/03810208-257C Ink low error (occurs when replacing the printhead) .....	6- 7
6.1.3.20 03810204-2580/03810201-2581/03810202-2582/03810203-2583/03810212-2584/03810213-2585/03810206-2586/ 03810205-2588/03810215-2589/03810207-258A/03810209-258B/03810208-258C Ink low error (occures when cleaning B is executed).....	6- 8
6.1.3.21 03810204-2590/03810201-2591/03810202-2592/03810203-2593/03810212-2594/03810213-2595/03810206-2596/ 03810205-2598/03810215-2599/03810207-259A/03810209-259B/03810208-259C Ink low error (occures when printing).....	6- 8
6.1.3.22 03800301-2801/03800201-2802/03800401-2803/03800201-2812/03800302-2809/03800202-280A/03800402-280B/ 03800202-2813 Printhead error .....	6- 8
6.1.3.23 03800101-2800/03800102-2808/03800201-2804/03800202-2807 Printhead installing error .....	6- 8
6.1.3.24 03800501-280D/03800502-280E Defective printhead nozzle .....	6- 9
6.1.3.25 03841201-2816/03841201-2817/03841101-2818/03841001-2819/03841001-281B Maintenance cartridge error.....	6- 9
6.1.3.26 03010000-2820/03010000-2821/03010000-2822/03010000-2823/03130031-2F32/03010000-2F33/ Adjustment error .....	6- 9
6.1.3.27 03130031-260E Gap detection error.....	6- 9
6.1.3.28 03130031-260F Gap adjustment error.....	6- 10
6.1.3.29 03130031-2618 VH voltage abnormality error .....	6- 10
6.1.3.30 03800500-2F2F/03800500-2F30 Head management sensor error .....	6- 10

6.1.3.31 03130031-2F16 Mist fan error.....	6- 10
6.1.3.32 03130031-2F17 Suction fan error .....	6- 10
6.1.3.33 03030000-2E21 IEEE1394 Error .....	6- 11
6.1.3.34 03130031-2F25 Carriage home position error .....	6- 11
6.1.3.35 03130031-2F26/03130031-2F27 Carriage motor error.....	6- 11
6.1.3.36 03130031-2F1F/03130031-2F20 Defective sensor in purge unit.....	6- 11
6.1.3.37 03130031-2F22/03130031-2F23/03130031-2F2D Purge motor driving error .....	6- 11
6.1.3.38 03130031-2F2A Feed roller home position error .....	6- 12
6.1.3.39 03130031-2F3A valve open/close error .....	6- 12
6.1.3.40 03130031-2F2E Roll media feeding error .....	6- 12
6.1.3.41 03130031-2F28 Lift motor time out error .....	6- 12

## 1.1 Product Overview

### 1.1.1 Product Overview

iPF8000 / iPF8000S / iPF8100

This printer is a large-format printer that prints in a maximum width of 44 inches with high-speed photographic picture quality. This printer is a stand-mounted type printer and is capable of output to either roll media or cut sheet.

## 1.2 Features

### 1.2.1 Features

iPF8000

- Media pass in widths up to 44 inches (1117.6 mm).
- Large ink tanks reduce the need for frequent ink replacement.
- Uninterrupted printing from sub tanks.
- BK and MBK inks are loaded concurrently to eliminate the need for their replacement.
- Media take-up unit (option) is supported.
- Media take-up unit (option) can be mounted concurrently with a basket.
- Durability will be added by maintenance kit.
- Large LCD panel displays more information and makes operations easier.
- High resolutions of 2400 x 1200 dpi maximum, coupled with the exceptionally light-fast, water-proof and ozone-proof 12-color pigment inks of MBK, BK, PC, C, PM, M, Y, R, G, B, GY, and PGY, deliver high-quality photographic picture quality.
- USB2.0 Hi-speed interface and 10Base-T/100Base-TX in standard support of a TCP/IP network, plus optional support of IEEE1394.
- Barcodes printed on roll media makes measuring the remaining roll length more manageable.
- Borderless four-side printing support (roll media) reduces laborious cutting work, easing the job of creating posters to a significant degree.
- High-speed printing with a 1-inch head for each color (1,280 nozzles), under bidirectional print control.

### 1.2.2 Features

iPF8100

- Media pass in widths up to 44 inches (1117.6 mm).
- Large ink tanks reduce the need for frequent ink replacement.
- Uninterrupted printing from sub tanks.
- BK and MBK inks are loaded concurrently to eliminate the need for their replacement.
- Media take-up unit (option) is supported.
- Media take-up unit (option) can be mounted concurrently with a basket.
- Durability will be added by maintenance kit.
- Large LCD panel displays more information and makes operations easier.
- High resolutions of 2400 x 1200 dpi maximum, coupled with the exceptionally light-fast, water-proof and ozone-proof 12-color pigment inks of MBK, BK, PC, C, PM, M, Y, R, G, B, GY, and PGY, deliver high-quality photographic picture quality.
- USB2.0 Hi-speed interface and 10Base-T/100Base-TX in standard support of a TCP/IP network, plus optional support of IEEE1394.
- Barcodes printed on roll media makes measuring the remaining roll length more manageable.
- Borderless four-side printing support (roll media) reduces laborious cutting work, easing the job of creating posters to a significant degree.
- High-speed printing with a 1-inch head for each color (1,280 nozzles), under bidirectional print control.

Functional enhancements new to this model include:

- Higher image quality

Use of abrasion-resistant inks (MBK, BK, PGY, GY) offers enhanced image durability.

The color calibration feature adds to the faithfulness of color reproduction.

- Enhanced ease of operation

The hard disk is installed for better print job management and for driving on night time.

### 1.2.3 Features

iPF8000S

- Media pass in widths up to 44 inches (1117.6 mm).
- Large ink tanks reduce the need for frequent ink replacement.
- Uninterrupted printing from sub tanks.
- BK and MBK inks are loaded concurrently to eliminate the need for their replacement.
- Media take-up unit (option) is supported.
- Media take-up unit (option) can be mounted concurrently with a basket.
- Durability will be added by maintenance kit.
- Large LCD panel displays more information and makes operations easier.
- High resolutions of 2400 x 1200 dpi maximum, coupled with the exceptionally light-fast, water-proof and ozone-proof 8-color pigment inks of MBK, BK, PC, C, PM, M, Y and GY, deliver high-quality photographic picture quality.
- USB2.0 Hi-speed interface and 10Base-T/100Base-TX in standard support of a TCP/IP network, plus optional support of IEEE1394.
- Barcodes printed on roll media makes measuring the remaining roll length more manageable.
- Borderless four-side printing support (roll media) reduces laborious cutting work, easing the job of creating posters to a significant degree.
- High-speed printing with a 1-inch head for each color (1,280 nozzles), under bidirectional print control.

Functional enhancements new to this model include:

- Higher image quality

The color calibration feature adds to the faithfulness of color reproduction.

- Enhanced ease of operation

The hard disk is installed for better print job management and for driving on night time.

- High printing productivity

The 8-color pigment ink system offers enhanced printing productivity.

### 1.2.4 Features

iPF8300

- Media pass in widths up to 44 inches (1117.6 mm).
- Large ink tanks reduce the need for frequent ink replacement.
- Uninterrupted printing from sub tanks.
- BK and MBK inks are loaded concurrently to eliminate the need for their replacement.
- Media take-up unit (option) is supported.
- Media take-up unit (option) can be mounted concurrently with a basket.
- Durability will be added by maintenance kit.
- High resolutions of 2400 x 1200 dpi maximum, coupled with the exceptionally light-fast, water-proof and ozone-proof 12-color pigment inks of MBK, BK, PC, C, PM, M, Y, R, G, B, GY, and PGY, deliver high-quality photographic picture quality.

- Barcodes printed on roll media makes measuring the remaining roll length more manageable.
- Borderless four-side printing support (roll media) reduces laborious cutting work, easing the job of creating posters to a significant degree.
- High-speed printing with a 1-inch head for each color (1280 nozzles), under bidirectional print control.
- The color calibration feature adds to the faithfulness of color reproduction.
- The hard disk is installed for better print job management.

Functional enhancements new to this model include:

- A newly developed 12-color pigment ink system "LUCIA EX" is used to improve rubfastness, chromogenic effect, and bronzing resistance, ensuring higher-grade printing.
- A new mode has been added to improve control of the optimum ink droplet landing order (when in the mode for the highest image quality) and the ink droplet landing accuracy, ensuring higher-grade printing.
- The network interface (10Base-T/100Base-TX/1000Base-T) compatible with 1000Base-T (Gigabit Ethernet) comes standard with the printer to cope with the high-speed LAN environment.
- A printhead having nozzles (I-shaped nozzle) with a new shape reduces ink mist, ensuring superfine printing.
- Compatibility with e-maintenance/imageWARE Remote allows centralized management of customer's printer information.
- The newly designed operation panel allows you to operate the printer intuitively.

## 1.2.5 Features

iPF8300S

- Media pass in widths up to 44 inches (1117.6 mm).
- Large ink tanks reduce the need for frequent ink replacement.
- Uninterrupted printing from sub tanks.
- BK and MBK inks are loaded concurrently to eliminate the need for their replacement.
- Media take-up unit (option) is supported.
- Media take-up unit (option) can be mounted concurrently with a basket.
- Durability will be added by maintenance kit.
- High resolutions of 2400 x 1200 dpi maximum, coupled with the exceptionally light-fast, water-proof and ozone-proof 8-color pigment inks of MBK, BK, PC, C, PM, M, Y and GY, deliver high-quality photographic picture quality.
- Barcodes printed on roll media makes measuring the remaining roll length more manageable.
- Borderless four-side printing support (roll media) reduces laborious cutting work, easing the job of creating posters to a significant degree.
- High-speed printing with a 1-inch head for each color (1280 nozzles), under bidirectional print control.
- The color calibration feature adds to the faithfulness of color reproduction.
- The hard disk is installed for better print job management.

Functional enhancements new to this model include:

- A newly developed 8-color pigment ink system "LUCIA EX" is used to improve rubfastness, chromogenic effect and bronzing resistance, ensuring higher-grade printing while keeping the high quality and high productivity.
- A new mode has been added to improve control of the optimum ink droplet landing order (when in the mode for the highest image quality) and the ink droplet landing accuracy, ensuring higher-grade printing.
- The network interface (10Base-T/100Base-TX/1000Base-T) compatible with 1000Base-T (Gigabit Ethernet) comes standard with the printer to cope with the high-speed LAN environment.
- A printhead having nozzles (I-shaped nozzle) with a new shape reduces ink mist, ensuring superfine printing.
- Compatibility with e-maintenance/imageWARE Remote allows centralized management of customer's printer information.
- The newly designed operation panel allows you to operate the printer intuitively.
- The symmetrical order of the printhead's ink nozzle color reduces uneven print.

## 1.2.6 Printhead

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The printhead that mounts on the carriage is an integrated six-color disposable printhead.

It has 2,560 nozzles for each color, comprising two trays of 1,280 nozzles each arranged in a zigzag pattern.

If print quality remains unimproved even after a specified cleaning operation, replace the printhead.

F-1-5

## 1.2.7 Ink tank

iPF8000 / iPF8100 / iPF8300

Ink tanks are disposable.

The ink tanks come with 12 colors: mat black (MBK), black (BK), photocyan (PC), cyan (C), photomagenta (PM), magenta (M), yellow (Y), red (R), blue (B), green (G), gray (GY) and photogray (PGY). Each of these inks are pigment ink.

The tanks are also available in two capacities: 330 mL and 700 mL.

Each tank is furnished with a notch for preventing incorrect installation, which will allow the tank to be installed only at the position marked in the right color.

An ink tank should be replaced when an ink tank replacement prompt message appears or when six months expire after the date of initial unpacking, whichever occurs earlier.

F-1-6

### 1.2.8 Ink tank

iPF8000S / iPF8300S

Ink tanks are disposable.

The ink tanks come with 8-colors: mat black (MBK), black (BK), photocyan (PC), cyan (C), photomagenta (PM), magenta (M), yellow (Y) and gray (GY). Each of these inks are pigment ink.

The tanks are also available in two capacities: 330 mL and 700 mL.

Each tank is furnished with a notch for preventing incorrect installation, which will allow the tank to be installed only at the position marked in the right color.

An ink tank should be replaced when an ink tank replacement prompt message appears or when six months expire after the date of initial unpacking, whichever occurs earlier.

F-1-7

### 1.2.9 Cutter Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The cutter unit that mounts on the carriage unit is disposable. Replace the cutter unit when it gets dull.

F-1-8

### 1.2.10 Roll holder

iPF8000 / iPF8000S / iPF8100

The printer comes with a roll holder for paper tubes having an inside diameter of 2 inches as standard. It supports an optional roller holder for paper tubes having an inside diameter of 3 inches.

Both roll holders clamp the paper tubes of roll media with an outside diameter of 150 mm or less from inside.

F-1-9

### 1.2.11 Roll Holder

iPF8300 / iPF8300S

The roller holder accepts paper tubes having inside diameters of both 2 and 3 inches. It is furnished with attachments for 2- and 3-inch diameter paper tubes. The roll holder clamps the paper tube of a roll not exceeding 150 mm in outside diameter from the inside.

F-1-10

[2-inch paper tube attachment]

F-1-11

[3-inch paper tube attachment 1]

F-1-12

[3-inch paper tube attachment 2]

F-1-13

**1.2.12 Stand**

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The stand is equipped with casters so that the printer can be easily moved.

F-1-14

T-1-3

[1] Stand

[2] Stopper

### 1.2.13 Media Take-up Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### Media take-up unit

The Media Take-up unit spools the 2 or 3 inch core, the roll media (17" to 44"), after it is printed by the host computer. Take-up begins once the falling paper is detected by the Media take-up paper detection sensor, attached to the weight roller. The roll media may also be manually spooled, using the button on the media take up unit. The media take-up unit has an overload protection feature to prevent accidents while spooling rolls. (This feature will disable the motor automatically when an overload occurs while spooling a roll.)

Additional features of the media take-up unit include:

- An adapter may be installed to support a 3-inch paper tube.
- Roll media can be unwound by feeding them backwards to visually check the images.
- Weight rollers varying in length to suit specific roll widths ensure added take up efficiency.
- The printer detects errors in the media take-up unit as an independent function.
- Linked with the printer's sleep mode.

- |     |                         |     |                    |

| [3] | Media take-up sensor    |     |                    |

#### Weight

This weight consists of weight roll(7 pcs.)[1], weight flange(2 sets)[2] and weight joint[3].

### 1.2.14 Hard Disk Drive

iPF8000S / iPF8100 / iPF8300

Each print job received from the host computer is saved to the 80GB hard disk drive(serial ATA connection) attached to the printer, so the printer can print the job repeatedly as needed, without having to wait for its retransmission from the host computer.

Saving print jobs will offer the following benefits:

- Eased computer workload

A print job may be automatically preserved to the hard disk when printing or may be preserved to the hard disk without printing. A print job preserved can be printed in as many copies as needed without having to use the host computer.

- Reprinting after error occurrence

If the printer encounters errors, such as paper out, while printing a print job, it can resume the print operation as soon as the errors are cleared, without needing its retransmission from the host computer.

- Higher print work efficiency

Print jobs can be printed selectively or in a specified number of copies without using a host computer. Multiple print jobs can be printed batched. Unattended print operations in the nighttime are also possible.

### 1.2.15 Hard Disk Drive

iPF8300S

Each print job received from the host computer is saved to the 160GB hard disk drive(serial ATA connection) attached to the printer, so the printer can print the job repeatedly as needed, without having to wait for its retransmission from the host computer.

Saving print jobs will offer the following benefits:

- Reduced computer workload

A print job may be automatically stored to the hard disk when printing or may be stored to the hard disk without printing. A print job stored to the hard disk may be printed multiple times without having to use the host computer.

- Reprinting after error occurrence

If the printer encounters errors, such as paper out, while printing a print job, it can resume the print operation as soon as the errors are cleared, without retransmission from the host computer.

- Higher print work efficiency

Print jobs can be printed selectively or in a specified number of copies without using a host computer. Multiple print jobs can be printed batched. Unattended print operations in the nighttime are also possible.

### 1.2.16 IEEE1394 (FireWire) Board

iPF8000 / iPF8000S / iPF8100

#### IEEE1394 (FireWire) expansion board (option)

An interface board that provides an additional IEEE1394 (FireWire) port.

F-1-17

## 1.2.17 Consumables

iPF8000 / iPF8100

### Printhead

The expendable printhead is the same as the one that comes with the printer.

F-1-18

### Ink tanks

Expendable ink tanks contain 12 colors: mat black, black, photocyan, cyan, photomagenta, magenta, yellow, red, blue, green, gray and photogray. Each tank is available in two capacities: 330 mL and 700 mL. Usable for six months after unpacking.

F-1-19

### Maintenance cartridge

The expendable maintenance cartridge (including the shaft cleaner) is the same as the one that comes with the printer.

F-1-20

## 1.2.18 Consumables

iPF8000S

### Printhead

The expendable printhead is the same as the one that comes with the printer.

F-1-21

### Ink tanks

Expendable ink tanks contain 8 colors: mat black, black, photocyan, cyan, photomagenta, magenta, yellow and gray. Each tank is available in two capacities: 330 mL and 700 mL.

Usable for six months after unpacking.

F-1-22

### Maintenance cartridge

The expendable maintenance cartridge (including the shaft cleaner) is the same as the one that comes with the printer.

F-1-23

## 1.2.19 Consumables

iPF8300

### Printhead

The expendable printhead is the same as the one that comes with the printer.

F-1-24

### Ink tanks

Expendable ink tanks contain 12 colors: mat black, black, photocyan, cyan, photomagenta, magenta, yellow, red, blue, green, gray and photogray. Each tank is available in two capacities: 330 mL and 700 mL. Usable for six months after unpacking.

F-1-25

### Maintenance cartridge

The expendable maintenance cartridge (including the shaft cleaner) is the same as the one that comes with the printer.

F-1-26

## 1.2.20 Consumables

iPF8300S

### Printhead

The expendable printhead is the same as the one that comes with the printer.

F-1-27

### Ink tanks

Expendable ink tanks contain 8 colors: mat black, black, photocyan, cyan, photomagenta, magenta, yellow and gray. Each tank is available in two capacities: 330 mL and 700 mL.

Usable for six months after unpacking.

F-1-28

### Maintenance cartridge

The expendable maintenance cartridge (including the shaft cleaner) is the same as the one that comes with the printer.

F-1-29

## 1.3 Product Specifications

### 1.3.1 Product Specifications

iPF8000

Type	Bubblejet printer (stand model)
Feeding system	Roll media: Manual (front loading) Cut media: Paper tray (front loading)
Feeding capacity	Roll media: 1 roll (up to 150 mm outside diameter) Standard roll holder: Paper tube, 50.8 mm (2") inside diameter Cut media: 1
Delivery method	Forward delivery, face up
Sheet delivery capability	1 (loaded in a basket)
Cutter	Automatic cross-cutter (round blade)
Type of media	Plain Paper, Plain Paper (High Quality), Plain Paper (High Grade), Recycled Coated Paper, Coated Paper, Heavyweight Coated Paper, Extra Heavyweight Coated Paper, Premium Matte Paper, Glossy Photo Paper, Semi-Glossy Photo Paper, Heavyweight Glossy Photo Paper, Heavyweight SemiGloss Photo Paper, Synthetic Paper, Adhesive Synthetic Paper, Backlit Film, Backprint Film, Flame-Resistant Cloth, Fabric Banner, Thin Fabric Banner, Proofing Paper, Fine Art Photo, Fine Art Heavyweight Photo, Fine Art Textured, Fine Art Watercolor, Fine Art Block Print, Canvas Matte, Canvas Semi-Glossy, Japanese Paper Washi, Colored Coated Paper, CAD Tracing Paper, CAD Translucent Matte Film, CAD Clear Film
Supported thickness	0.07 mm to 0.8 mm
Media size (Roll media)	Width: 254 mm (10") to 1117.6 mm (44") Length: 203.2 mm (8") to 18000 mm (709") * Outer diameter of roll : 150mm or less * The maximum amount of length may vary by the using operating system or the applications.
Media size (Cut sheet)	Width: 203.2 mm (8") to 1117.6 mm (44") Length: 203.2 mm (8") to 1600 mm (63")
Printable area (Roll media)	Internal area, excluding a 5-mm top, bottom and left and right margins. * The printable area may vary with each type of paper media used.
Printable area (Cut sheet)	Internal area, excluding a 5-mm top margin, a 23-mm bottom margin and 5-mm left and right margins.
Printing recommendation area (Roll media)	Internal area, excluding a 20-mm top margin, a 5-mm bottom margin and 7-mm left and right margins.
Printing recommendation area (Cut sheet)	Internal area, excluding a 20 mm top margin, a 23-mm bottom margin and 7-mm left and right margins.
Borderless printing	* Roll media only width: 254 mm (10"), 355.6 mm (14"), 406.4 mm (16"), 515 mm (20.28"), 594 mm (23.39"), 609.6 mm (24"), 841 mm (33.11"), 914.4 mm (36"), 1030 mm (40.55"), 1066.8 mm (42"),
Memory	384MB Increase of memory: none
Firmware	Flash ROM (update from USB or Ethernet, IEEE1394) - Printer description language GARO (Graphic Arts language with Raster Operation)
Emulation	None.
Interface	USB 2.0 Hi-speed Network (10BASE-T/100BASE-TX) IEEE1394 (optional)
Operation panel	LCD (160 X 128 dots), 12 keys, 5 LEDs - Panel language English - Message language English, German, French, Italian, Spanish, Chinese, Korean and Japanese
Printhead/Ink Tank type	Independent printhead/ink tanks
Printhead	PF-02 Structure: Integrated six-color assembly Number of nozzles: 2,560 for each color
Ink tank	PFI-301 MBK/BK/PC/C/PM/M/Y/R/G/B/GY/PGY PFI-701 MBK/BK/PC/C/PM/M/Y/R/G/B/GY/PGY Ink type: Pigment ink Ink tank capacity: PFI-301 330 mL, PFI-701 700 mL
Detection functions (Cover system)	Cover open/closed detection: Yes Left and right ink tank cover open/closed detection: Yes
Detection functions (Ink passage system)	Ink tank presence/absence detection: Yes Remaining ink level detection: Yes Maintenance cartridge presence/absence detection: Yes Used ink tank full detection: Yes

<b>Detection functions (Carriage system)</b>	Printhead presence/absence detection: Yes Carriage position detection: Yes Carriage home position detection: Yes Carriage cover open/closed detection: Yes Carriage temperature detection: Yes Printhead height detection: Yes Non-discharging nozzle detection: Yes Non-discharging nozzle backup feature: Yes
<b>Detection functions (Paper path system)</b>	Paper presence/absence detection: Yes Paper width detection: Yes Skew detection: Yes Paper release lever position detection: Yes Remaining roll media detection: Yes Feed roller rotation detection: Yes
<b>Operating noise</b>	Operating: Approx. 54dB (A) or less Idle: Approx. 35dB (A) or less
<b>Operating environment</b>	Operating temperature: 5oC to 35oC Relative humidity: 10% to 90%RH
<b>Print quality guaranteed environment</b>	Guaranteed print quality temperature: 15oC to 30oC Relative humidity: 10% to 80%RH
<b>Power supply</b>	AC100 to 240V, 1.9A, 50/60Hz
<b>Power consumption (Maximum)</b>	Maximum: 190W
<b>Power consumption</b>	Sleep mode: 5W or less (100 to 120V, 8W or less when IEEE1394 installed) 6W or less (220 to 240V, 9W or less when IEEE1394 installed) Powered off: 1W or less
<b>Printer unit dimensions (WxDxH)</b>	1893 mm x 975 mm x 1144 mm (including stand and basket)
<b>Weight</b>	Printer: Approx. 111kg Stand: Approx. 28kg Media take-up unit: Approx. 5kg

### 1.3.2 Product Specifications

iPF8100

<b>Type</b>	Bubble jet large-sized paper printer (stand model)
<b>Feeding system</b>	Roll media: Manual (front loading) Cut sheet: Paper tray (front loading)
<b>Feeding capacity</b>	- Roll media One roll Outer diameter of roll: 150 mm or less/Inner diameter of paper tube: 3 inches(standard roll holder ) - Cut sheet 1 sheet
<b>Delivery method</b>	Forward delivery, face up
<b>Sheet delivery capability</b>	1 sheet (using the outout stacker of the stand)
<b>Cutter</b>	Automatic cross-cutter (round blade)
<b>Type of media</b>	Plain Paper, Plain Paper (High Quality), Plain Paper (High Grade), Coated Paper, Heavyweight Coated Paper, Premium Matte Paper, Glossy Photo Paper, Semi-Glossy Photo Paper, Backlit Film, Backprint Film, Flame-Resistant Cloth, Fine Art Photo, Fine Art Heavyweight Photo, Fine Art Textured, Canvas Matte, Premium Coated Paper, Graphic Canvas, Durable Backlit Film, Durable Banner, Matt Coated Paper, Extra Matt Coated Paper, Opaque Paper, Hi Res Graphic Paper, Prem Art Paper Embossed, Prem Art Paper Smooth, Hi Res Barrier Paper, Scrim Banner, Uni Opaque Backlit Film, Roll-Up Film, Water Res Art Canvas, Adhesive Matt Vinyl Stretch
<b>Supported thickness</b>	0.07mm to 0.8mm
<b>Media size (Roll media)</b>	Width: 254mm (10") to 1118mm (44") Length: 203mm (8") to 18m (709") * Outer diameter of roll :150mm or less * The maximum amount of length may vary by the using operating system or the applications.
<b>Media size (Cut sheet)</b>	Width: 203mm (8") to 1118mm (44") Length: 203mm (8") to 1600mm (63")
<b>Printable area (Roll media)</b>	Internal area, excluding a 5-mm top, bottom and left and right margins. * The printable area may vary with each type of paper media used.
<b>Printable area (Cut sheet)</b>	Internal area, excluding a 5-mm top margin, a 23-mm bottom margin and 5-mm left and right margins. * The printable area may vary with each type of paper media used.
<b>Printing recommendation area (Roll media)</b>	Internal area, excluding a 20-mm top margin, a 5-mm bottom margin and 5-mm left and right margins.
<b>Printing recommendation area (Cut sheet)</b>	Internal area, excluding a 20-mm top margin, a 23-mm bottom margin and 5-mm left and right margins.
<b>Borderless printing</b>	* Roll media only width: 254mm(10"), 355.6mm(14"), 406.4mm(16"), 515mm, 594mm, 609.6mm(24"), 841mm, 914.4mm(36"), 1030mm, 1066.8mm(42")
<b>Memory</b>	384MB Increase of memory: none

<b>Firmware</b>	Flash ROM (update from USB or Ethernet, IEEE1394) - Printer description language GARO (Graphic Arts language with Raster Operation)
<b>Hard disk drive</b>	80GB (2.5inch, 5400rpm, S-ATA I/F)
<b>Emulation</b>	None
<b>Interface</b>	USB 2.0 Hi-Speed Network (10BASE-T/100BASE-TX) IEEE1394 (option)
<b>Operation panel</b>	LCD (160 X 128 dots), 12 keys, 5 LEDs - Panel language English - Message language English, German, French, Italian, Spanish, Chinese, Korean, Russian and Japanese
<b>Printhead/Ink Tank type</b>	Printhead and separate ink tanks
<b>Printhead</b>	PF-03 Structure: Integrated six-color assembly Number of nozzles: 2,560 for each color
<b>Ink tank</b>	PFI-301 C/M/Y/PC/PM/R/G/B PFI-701 C/M/Y/PC/PM/R/G/B PFI-302 BK/MBK/GY/PGY PFI-702 BK/MBK/GY/PGY Ink type: Pigment ink Ink tank capacity: PFI-301/302 330 ml, PFI-701/702 700 ml
<b>Detection functions (Cover system)</b>	Cover open/closed detection: Yes Left and right ink tank cover open/closed detection: Yes
<b>Detection functions (Ink passage system)</b>	Ink tank presence/absence detection: Yes Remaining ink level detection: Yes Maintenance cartridge presence/absence detection: Yes Used ink tank full detection: Yes
<b>Detection functions (Carriage system)</b>	Printhead presence/absence detection: Yes Carriage position detection: Yes Carriage home position detection: Yes Carriage cover open/closed detection: Yes Carriage temperature detection: Yes Printhead height detection: Yes Non-discharging nozzle detection: Yes Non-discharging nozzle backup feature: Yes
<b>Detection functions (Paper path system)</b>	Paper presence/absence detection: Yes Paper width detection: Yes Skew detection: Yes Paper release lever position detection: Yes Remaining roll media detection: Yes Feed roller rotation detection: Yes
<b>Operating noise</b>	Operating: Approx. 50dB (A) or less Standby: Approx. 35dB (A) or less
<b>Operating environment</b>	Temperature: 15 to 35 degrees centigrade Humidity: 10% to 90%RH
<b>Print quality guaranteed environment</b>	Temperature: 15 to 30 degrees centigrade Humidity: 10% to 80%RH
<b>Power supply</b>	100-240 VAC (50/60 Hz)
<b>Power consumption (Maximum)</b>	During printing: Max. 190 W
<b>Power consumption</b>	In power save (sleep) mode: 100-120 VAC : 5W or less (When IEEE1394 board installed, 10W or less) 220-240 VAC : 6W or less (When IEEE1394 board installed, 11W or less) During standby: 1 W or less
<b>Printer unit dimensions (WxDxH)</b>	1893mm x 975mm x 1144mm (with stand and output stacker)
<b>Weight</b>	Approx. 141 kg (with stand and output stacker)

### 1.3.3 Product Specifications

iPF8000S

<b>Type</b>	Bubble jet large-sized paper printer (stand model)
<b>Feeding system</b>	Roll media: Manual (front loading) Cut sheet: Paper tray (front loading)
<b>Feeding capacity</b>	- Roll media One roll Outer diameter of roll: 150 mm or less/Inner diameter of paper tube: 3 inches(standard roll holder ) - Cut sheet 1 sheet
<b>Delivery method</b>	Forward delivery, face up
<b>Sheet delivery capability</b>	1 sheet (using the outout stacker of the stand)
<b>Cutter</b>	Automatic cross-cutter (round blade)

Type of media	Plain Paper, Plain Paper (High Quality), Plain Paper (High Grade), Coated Paper, Heavyweight Coated Paper, Premium Matte Paper, Glossy Photo Paper, Semi-Glossy Photo Paper, Backlit Film, Backprint Film, Flame-Resistant Cloth, Fine Art Photo, Fine Art Heavyweight Photo, Fine Art Textured, Canvas Matte, Premium Coated Paper, Graphic Canvas, Durable Backlit Film, Durable Banner, Matt Coated Paper, Extra Matt Coated Paper, Opaque Paper, Hi Res Graphic Paper, Prem Art Paper Embossed, Prem Art Paper Smooth, Hi Res Barrier Paper, Scrim Banner, Uni Opaque Backlit Film, Roll-Up Film, Water Res Art Canvas, Adhesive Matt Vinyl Stretch
Supported thickness	0.07mm to 0.8mm
Media size (Roll media)	Width: 254mm (10") to 1118mm (44") Length: 203mm (8") to 18m (709") * Outer diameter of roll :150mm or less * The maximum amount of length may vary by the using operating system or the applications.
Media size (Cut sheet)	Width: 203mm (8") to 1118mm (44") Length: 203mm (8") to 1600mm (63")
Printable area (Roll media)	Internal area, excluding a 5-mm top, bottom and left and right margins. * The printable area may vary with each type of paper media used.
Printable area (Cut sheet)	Internal area, excluding a 5-mm top margin, a 23-mm bottom margin and 5-mm left and right margins. * The printable area may vary with each type of paper media used.
Printing recommendation area (Roll media)	Internal area, excluding a 20-mm top margin, a 5-mm bottom margin and 5-mm left and right margins.
Printing recommendation area (Cut sheet)	Internal area, excluding a 20-mm top margin, a 23-mm bottom margin and 5-mm left and right margins.
Borderless printing	* Roll media only width: 254mm(10"), 355.6mm(14"), 406.4mm(16"), 515mm, 594mm, 609.6mm(24"), 841mm, 914.4mm(36"), 1030mm, 1066.8mm(42")
Memory	384MB Increase of memory: none
Firmware	Flash ROM (update from USB or Ethernet, IEEE1394) - Printer description language GARO (Graphic Arts language with Raster Operation)
Hard disk drive	80GB (2.5inch, 5400rpm, S-ATA I/F)
Emulation	None
Interface	USB 2.0 Hi-Speed Network (10BASE-T/100BASE-TX) IEEE1394 (option)
Operation panel	LCD (160 X 128 dots), 12 keys, 5 LEDs - Panel language English - Message language English, German, French, Italian, Spanish, Chinese, Korean, Russian and Japanese
Printhead/Ink Tank type	Printhead and separate ink tanks
Printhead	[PF-03] - Number nozzles C, PC, PM, GY: 2560 nozzles per color X2 - Number nozzles BK, MBK, M, Y: 2560 nozzles per color
Ink tank	PFI-301 BK/MBK/C/M/Y/PC/PM/GY PFI-701 BK/MBK/C/M/Y/PC/PM/GY Ink type: Pigment ink Ink tank capacity: PFI-301 330 ml, PFI-701 700 ml
Detection functions (Cover system)	Cover open/closed detection: Yes Left and right ink tank cover open/closed detection: Yes
Detection functions (Ink passage system)	Ink tank presence/absence detection: Yes Remaining ink level detection: Yes Maintenance cartridge presence/absence detection: Yes Used ink tank full detection: Yes
Detection functions (Carriage system)	Printhead presence/absence detection: Yes Carriage position detection: Yes Carriage home position detection: Yes Carriage cover open/closed detection: Yes Carriage temperature detection: Yes Printhead height detection: Yes Non-discharging nozzle detection: Yes Non-discharging nozzle backup feature: Yes
Detection functions (Paper path system)	Paper presence/absence detection: Yes Paper width detection: Yes Skew detection: Yes Paper release lever position detection: Yes Remaining roll media detection: Yes Feed roller rotation detection: Yes
Operating noise	Operating: Approx. 50dB (A) or less Standby: Approx. 35dB (A) or less
Operating environment	Temperature: 5 to 35 degrees centigrade Humidity: 10% to 90%RH
Print quality guaranteed environment	Temperature: 15 to 30 degrees centigrade Humidity: 10% to 80%RH
Power supply	100-240 VAC (50/60 Hz)

<b>Power consumption (Maximum)</b>	During printing: Max. 190 W
<b>Power consumption</b>	In power save (sleep) mode: 100-120 VAC : 5W or less (When IEEE1394 board installed, 10W or less) 220-240 VAC : 6W or less (When IEEE1394 board installed, 11W or less) During standby: 1 W or less
<b>Printer unit dimensions (WxDxH)</b>	1893mm x 975mm x 1144mm (with stand and output stacker)
<b>Weight</b>	Approx. 135 kg (with stand and output stacker)

<b>Operating noise</b>	Operating: Approx. 50dB (A) or less Standby: Approx. 35dB (A) or less
<b>Operating environment</b>	Temperature: 15 to 35 degrees centigrade Humidity: 10% to 90%RH
<b>Print quality guaranteed environment</b>	Temperature: 15 to 30 degrees centigrade Humidity: 10% to 80%RH
<b>Power supply</b>	100-240 VAC (50/60 Hz)
<b>Power consumption (Maximum)</b>	During printing: Max. 190 W
<b>Power consumption</b>	In power save (sleep) mode: 100-120 VAC : 5W or less 220-240 VAC : 6W or less During standby: 1 W or less
<b>Printer unit dimensions (WxDxH)</b>	1893mm x 975mm x 1144mm (with stand and output stacker)
<b>Weight</b>	Approx. 143 kg (with stand and output stacker)

## 1.4 Detailed Specifications

### 1.4.1 Printing mode

### 1.4.4 Interface Specifications

iPF8300 / iPF8300S

#### a. USB (standard)

- (1) Interface type  
USB 2.0 Hi-Speed (Full speed (12 Mbits/sec), High speed (480 Mbits/sec))
- (2) Data transfer system  
Control transfer  
Bulk transfer
- (3) Signal level  
Compliant with the USB standard.
- (4) Interface cable  
Twisted-pair shielded cable, 5.0 m max.  
Compliant with the USB standard.  
Wire materials: AWG No.28, data wire pair (AWF: American Wire Gauge)  
AWG No.20 to No.28, power distribution wire pair
- (5) Interface connector  
Printer side: Series B receptacle compliant with USB standard  
Cable side: Series B plug compliant with USB standard

#### b. Network (standard)

- (1) Interface type  
Interface compliant with IEEE802.3
- (2) Data transfer system  
IEEE802.0 10Base-T, IEEE802.3u 100Base-TX/Auto-Negotiation, IEEE802.3ab 1000Base-T/Auto-Negotiation, IEEE802.3x Full Duplex
- (3) Interface cable  
Category 5 (UTP or FTP) cable, 100 m or shorter  
Compliant with ANSI/EIA/TIA-568A or ANSI/EIA/TIA-568B
- (4) Interface connector  
Printer side: Compliant with IEEE802.3, ANSI X3.263, ISO/IEC60603-7
- (5) Protocol  
IPX/SPX (Netware4.2(J), 5.1(J), 6.0(J)), SNMP, TCP/IP, AppleTalk, HTTP

### 1.4.5 Interface Specifications

iPF8000 / iPF8000S / iPF8100

#### a. USB (standard)

- (1) Interface type  
USB 2.0, Full speed (12 Mb/s), Hi-speed (480 Mb/s)
- (2) Data transfer system  
Control transfer  
Bulk transfer
- (3) Signal level  
Compliant with the USB standard.
- (4) Interface cable  
Twisted-pair shielded cable, 5.0 m max.  
Compliant with the USB standard.  
Wire materials: AWG No.28, data wire pair (AWG: American Wire Gauge)  
AWG No.20 to No.28, power distribution wire pair
- (5) Interface connector  
Printer side: Series B receptacle compliant with USB standard  
Cable side: Series B plug compliant with USB standard

#### b. Network (standard)

- (1) Interface type  
Interface compliant with IEEE802.3
- (2) Data transfer system  
10Base-T/100Base-TX
- (3) Signal level  
Input: Threshold  
10Base-T: Max. +585 mV, Min. +300 mV  
100Base-TX: Turn-on +1000 mV diff pk-pk, Turn-off +200 mV diff pk-pk  
Output:  
10Base-T: +2.2 V to +2.8 V  
100Base-TX: +0.95 to +1.05 V
- (4) Interface cable  
Category 5 (UTP or FTP) cable, 100 m or shorter  
Compliant with ANSI/EIA/TIA-568A or ANSI/EIA/TIA-568B
- (5) Interface connector  
Printer side: Compliant with IEEE802.3, ANSI X3.263, ISO/IEC60603-7

#### c. IEEE1394 (option)

- (1) Interface type  
Interface compliant with IEEE1394-1995, P1394a (Version 2.0)
- (2) Data transfer system  
Asynchronous transfer
- (3) Signal level  
Input:  
Differential input voltage:  
During S100 settlement: +173 mV to +260 mV  
During data reception: +142 mV to +260 mV  
During S200 settlement: +171 mV to +262 mV  
During data reception: +132 mV to +260 mV  
During S400 settlement: +168 mV to +265 mV  
During data reception: +118 mV to +260 mV  
Output:  
Differential output voltage: +172 mV to +265 mV
- (4) Interface cable  
Twisted-pair shielded cable, 4.5 m max.  
Compliant with IEEE1394-1995 standard or P1394a (Version 2.0) standard
- (5) Interface connector  
Printer side: 6-pin connector (socket) compliant with IEEE1394 standard  
Cable side: 6-pin connector (plug) compliant with IEEE1394 standard  
Cable side: RJ-45 type compliant with ANSI/EIA/TIA-568A or ANSI/EIA/TIA-568B

## 1.5 Names and Functions of Components

### 1.5.1 Front

iPF8000 / iPF8000S / iPF8100

F-1-30

- [1] Top Cover  
Open this cover to install the Printhead, load paper, and remove any jammed paper from inside the printer as needed.
- [2] Ink Tank Cover  
Open this cover to replace an Ink Tank.
- [3] Ejection Slot  
All printed matter is ejected from this port.
- [4] Ejection Guide  
Guides printed documents as they are ejected. Open this guide when loading a roll.
- [5] Output Stacker  
A cloth tray that catches ejected documents.
- [6] Roll Holder Slot  
Slide the Roll Holder into this slot.
- [7] Holder Stopper  
Secure the roll on the Roll Holder with this part.
- [8] Roll Holder  
Load the roll on this holder.
- [9] Paper Feed Slot  
When loading a roll, insert the edge of the roll paper here.
- [10] Ejection Support  
Prevents printed documents from winding around the Roll Holder or Paper Feed Slot.
- [11] Release Lever  
Releases the Paper Retainer. Lift this lever toward the front of the printer when loading paper.
- [12] Stand  
A stand that holds the printer. Equipped with casters to facilitate moving the printer.
- [13] Maintenance Cartridge Cover  
Open this cover to replace the Maintenance Cartridge.
- [14] Maintenance Cartridge  
Ink used for maintenance purposes such as head cleaning is absorbed. (Replace the cartridge when it is full.)
- [15] Operation Panel  
Use this panel to operate the printer and check the printer status.

## 1.5.2 Front

iPF8300 / iPF8300S

F-1-31

- [1] Top Cover  
Open this cover to install the Printhead, load paper, and remove any jammed paper from inside the printer as needed.
- [2] Ink Tank Cover  
Open this cover to replace an Ink Tank.
- [3] Ejection Slot  
All printed matter is ejected from this port.
- [4] Ejection Guide  
Guides printed documents as they are ejected. Open this guide when loading a roll.
- [5] Output Stacker  
A cloth tray that catches ejected documents.
- [6] Roll Holder Slot  
Slide the Roll Holder into this slot.
- [7] Holder Stopper  
Secure the roll on the Roll Holder with this part.
- [8] Roll Holder  
Load the roll on this holder.
- [9] Paper Feed Slot  
When loading a roll, insert the edge of the roll paper here.
- [10] Ejection Support  
Prevents printed documents from winding around the Roll Holder or Paper Feed Slot.
- [11] Release Lever  
Releases the Paper Retainer. Lift this lever toward the front of the printer when loading paper.
- [12] Stand  
A stand that holds the printer. Equipped with casters to facilitate moving the printer.
- [13] Maintenance Cartridge Cover  
Open this cover to replace the Maintenance Cartridge.
- [14] Maintenance Cartridge  
Ink used for maintenance purposes such as head cleaning is absorbed. (Replace the cartridge when it is full.)
- [15] Operation Panel  
Use this panel to operate the printer and check the printer status.

### 1.5.3 Rear

iPF8000 / iPF8000S / iPF8100

F-1-32

- [1] Expansion Board Slot  
Install an IEEE 1394 (FireWire) expansion board, as desired.
- [2] Ethernet Port  
Connect an Ethernet cable to this port. The lamp is lit if the Ethernet cable is connected correctly and communication is possible between the computer and printer.
- [3] USB Port  
Connect a USB cable to this port. This port is compatible with USB 2.0 Hi-Speed mode.
- [4] Accessory Pocket  
Holds printer manuals, assembly tools, and other items.
- [5] Media Take-up Unit Power Inlet  
Connect the power cord of the Media Take-up Unit here.
- [6] Power Supply Connector  
Connect the power cord to this connector.
- [7] Carrying handles  
When carrying the printer, have six people hold it by these handles under both sides.

### 1.5.4 Rear

iPF8300 / iPF8300S

F-1-33

- [1] Ethernet Port  
Connect an Ethernet cable to this port. The lamp is lit if the Ethernet cable is connected correctly and communication is possible between the computer and printer.
- [2] USB Port  
Connect a USB cable to this port. This port is compatible with USB 2.0 Hi-Speed mode.
- [3] Accessory Pocket  
Holds printer manuals, assembly tools, and other items.
- [4] Media Take-up Unit Power Inlet  
Connect the power cord of the Media Take-up Unit here.
- [5] Power Supply Connector  
Connect the power cord to this connector.
- [6] Carrying handles  
When carrying the printer, have six people hold it by these handles under both sides.

## 1.5.5 Top Cover (Inside)

iPF8000 / iPF8000S / iPF8100

- [1] Top Cover Roller  
Prevents paper from rising when ejected.
- [2] Carriage  
Moves the Printhead. The carriage serves a key role in printing.
- [3] Borderless Printing Ink Grooves  
These grooves catch ink outside the edges of paper during borderless printing.
- [4] Fixed Blade  
The Cutter Unit passes through this blade to cut paper.
- [5] Platen  
The Printhead moves across the platen to print. The Vacuum holes on the platen hold paper in place.
- [6] Pinch Roller  
Important in supplying the paper. This retainer holds paper as it is fed.
- [7] Carriage Shaft  
The Carriage slides along this shaft.
- [8] Paper Alignment Line  
Align paper with this line when loading it.
- [9] Cleaning Brush  
When cleaning inside of the Top Cover, use this brush to sweep away paper dust on the Platen.

## 1.5.6 Top Cover (Inside)

iPF8300 / iPF8300S

F-1-35

- [1] Top Cover Roller  
Prevents paper from rising when ejected.
- [2] Carriage  
Moves the Printhead. The carriage serves a key role in printing.
- [3] Borderless Printing Ink Grooves  
These grooves catch ink outside the edges of paper during borderless printing.
- [4] Fixed Blade  
The Cutter Unit passes through this blade to cut paper.
- [5] Platen  
The Printhead moves across the platen to print. The Vacuum holes on the platen hold paper in place.
- [6] Pinch Roller  
Important in supplying the paper. This retainer holds paper as it is fed.
- [7] Carriage Shaft  
The Carriage slides along this shaft.
- [8] Paper Alignment Line  
Align paper with this line when loading it.
- [9] Cleaning Brush  
When cleaning inside of the Top Cover, use this brush to sweep away paper dust on the Platen.
- [10] Switch  
Set the switch to the side opposite of the circle mark if the edges of printed images are blurred. Set the switch to the circle mark side before borderless printing.

### 1.5.7 Carriage

iPF8000 / iPF8000S / iPF8100

F-1-36

- [1] Printhead Fixer Cover  
Holds the Printhead in place.
- [2] Printhead  
Equipped with ink nozzles. Printheads serve a key role in printing.
- [3] Carriage Cover  
Protects the Carriage.
- [4] Cutter Unit  
A round-bladed cutter for automatic paper cutting. The cutter blade is retracted inside when not cutting.
- [5] Printhead Fixer Lever  
Locks the Printhead Fixer Cover.
- [6] Shaft Cleaner  
Prevents the Carriage Shaft from becoming dirty.

### 1.5.8 Carriage

iPF8300 / iPF8300S

F-1-37

- [1] Printhead Fixer Cover  
Holds the Printhead in place.
- [2] Printhead  
Equipped with ink nozzles. Printheads serve a key role in printing.
- [3] Carriage Cover  
Protects the Carriage.
- [4] Cutter Unit  
A round-bladed cutter for automatic paper cutting. The cutter blade is retracted inside when not cutting.
- [5] Printhead Fixer Lever  
Locks the Printhead Fixer Cover.
- [6] Shaft Cleaner  
Prevents the Carriage Shaft from becoming dirty.
- [7] Cutter Unit Detachment Lever  
Used when replacing the Cutter Unit.

### 1.5.9 Ink Tank Cover (Inside)

iPF8000 / iPF8100 / iPF8300

F-1-38

[1] Ink Tank

Cartridges of ink in each color.

[2] Ink Tank Lock Lever

A lever that locks the Ink Tank in place and protects it. Lift and press down the lever when replacing an Ink Tank. To open it, lift the stopper of the lever until it stops, and then push it down toward the front. To close it, push it down until it clicks into place.

### 1.5.10 Ink Tank Cover (Inside)

iPF8000S

[1] Ink Tank

Cartridges of ink in each color.

[2] Ink Tank Lock Lever

A lever that locks the Ink Tank in place and protects it. Lift and press down the lever when replacing an Ink Tank. To open it, lift the stopper of the lever until it stops, and then push it down toward the front. To close it, push it down until it clicks into place.

[3] Accessory Box

Holds CD-ROM included with the printer, reserved printhead, and other items.

### 1.5.11 Ink Tank Cover (Inside)

iPF8300S

F-1-40

[1] Ink Tank

Cartridges of ink in each color.

[2] Ink Tank Lock Lever

A lever that locks the Ink Tank in place and protects it. Lift and press down the lever when replacing an Ink Tank. To open it, lift the stopper of the lever until it stops, and then push it down toward the front. To close it, push it down until it clicks into place.

## 1.6 Basic Operation

### 1.6.1 Operation Panel

iPF8000S / iPF8100

This section explains the functions of the buttons and the meanings of the LEDs on the operation panel.

- F-1-41
- [1] Message lamp  
On: Indicates that a warning message is on display.  
Blinking: Indicates that an error message is on display.  
Off: The printer is normal or is turned off.
  - [2] Data lamp  
Blinking: Indicates that a print job is being received or processed if the printer is printing, or that a print job has paused or firmware data is being if the printer is not printing.  
Off: No print job is available.
  - [3] Online button  
Toggles the printer mode between online and offline.  
On: Online mode.  
Blinking: Emerging from sleep mode.  
Off: Offline mode.
  - [4] Cut sheet lamp (green)  
On: Either the paper tray or paper tray front loading port is selected as a paper source.  
Off: Roll media are selected as a paper source.
  - [5] Roll media lamp (green)  
On: Roll media are selected as a paper source.  
Off: Either the paper tray or paper tray front loading port is selected as a paper source.
  - [6] Menu button  
Displays the printer main menu.
  - [7] Paper source button  
Selects a paper source. Each time this button is pressed, the paper source toggles between roll media (roll media source) and cut sheet (paper tray or paper tray front loading port), with the paper source selector lamp illuminating.
  - [8] Color labels  
Represent ink tank colors in association with the remaining ink levels shown in the display.
  - [9] Display  
Displays the printer menu, status or messages.
  - [10] HDD lamp (Green)  
On: Indicates the printer is accessing the hard disk.  
Off: Indicates the printer is not accessing the hard disk.
  - [11] ▼ button  
Press this button when the printer is in offline mode to manually feed roll media.  
Press this button when the printer is in menu mode to view the next item or setting.
  - [12] ► button  
Press this button when the printer is in menu mode to view the menu at the lower level.  
If [NEXT -->] on display, the guidance screen can be moved forward.
  - [13] Load/Eject button  
Guidance offers a visual clue to loading (replacing)/removing paper. Press this button when no paper is loaded to view instructions on how to load (replace) paper in the display; press the button when paper is loaded to view instructions on how to remove the paper.
  - [14] Stop button  
Press for longer than 1 second to cancel the job or ink drying process in progress.  
If cut sheet loading guidance or the like is on display, hold this button for longer than 1 second to stop the guidance.
  - [15] Power button  
Turns the printer on and off.
  - [16] Information button  
Displays the printer submenu. Each time this button is pressed, information about the inks and paper is displayed.  
Hold this button depressed for 3 seconds to execute printhead cleaning ([Head Cleaning A]).
  - [17] OK button  
Press to set or set or execute a menu choice when the printer is in menu mode.  
Press this button in any other situation to transition to the next screen as directed by a message appearing in the display.
  - [18] ▲ button  
Press this button when the printer is in offline mode to manually feed roll media in the direction opposite to that of ejection.  
Press this button when the printer is in menu mode to view the last item or setting.
  - [19] ◀ button  
Press this button when the printer is in menu mode to view the menu at the upper level.  
The button is also used from one position to the next when entering a numeric value.  
If [← STOP] is on display, the guidance screen can be paused.  
If [← BACK] on display, the guidance screen can be moved backward.

## 1.6.2 Operation Panel

iPF8000

This section explains the functions of the buttons and the meanings of the LEDs on the operation panel.

F-1-42

### [1] Message lamp

- On: Indicates that a warning message is on display.
- Blinking: Indicates that an error message is on display.
- Off: The printer is normal or is turned off.

### [2] Data lamp

- Blinking: Indicates that a print job is being received or processed if the printer is printing, or that a print job has paused or firmware data is being if the printer is not printing.
- Off: No print job is available.

### [3] Online button

- Toggles the printer mode between online and offline.
- On: Online mode.
- Blinking: Emerging from sleep mode.
- Off: Offline mode.

### [4] Cut sheet lamp (green)

- On: Either the paper tray or paper tray front loading port is selected as a paper source.
- Off: Roll media are selected as a paper source.

### [5] Roll media lamp (green)

- On: Roll media are selected as a paper source.
- Off: Either the paper tray or paper tray front loading port is selected as a paper source.

### [6] Menu button

- Displays the printer main menu.

### [7] Paper source button

- Selects a paper source. Each time this button is pressed, the paper source toggles between roll media (roll media source) and cut sheet (paper tray or paper tray front loading port), with the paper source selector lamp illuminating.

### [8] Color labels

- Represent ink tank colors in association with the remaining ink levels shown in the display.

### [9] Display

- Displays the printer menu, status or messages.

### [10] ▼ button

- Press this button when the printer is in offline mode to manually feed roll media.
- Press this button when the printer is in menu mode to view the next item or setting.

### [11] ► button

- Press this button when the printer is in menu mode to view the menu at the lower level.
- If [NEXT -->] on display, the guidance screen can be moved forward.

### [12] Load/Eject button

- Guidance offers a visual clue to loading (replacing)/removing paper. Press this button when no paper is loaded to view instructions on how to load (replace) paper in the display; press the button when paper is loaded to view instructions on how to remove the paper.

### [13] Stop button

- Press for longer than 1 second to cancel the job or ink drying process in progress.
- If cut sheet loading guidance or the like is on display, hold this button for longer than 1 second to stop the guidance.

### [14] Power button

- Turns the printer on and off.

### [15] Information button

- Displays the printer submenu. Each time this button is pressed, information about the inks and paper is displayed.
- Hold this button depressed for 3 seconds to execute printhead cleaning ([Head Cleaning A]).

### [16] OK button

- Press to set or set or execute a menu choice when the printer is in menu mode.
- Press this button in any other situation to transition to the next screen as directed by a message appearing in the display.

### [17] ▲ button

- Press this button when the printer is in offline mode to manually feed roll media in the direction opposite to that of ejection.
- Press this button when the printer is in menu mode to view the last item or setting.

### [18] ◀ button

- Press this button when the printer is in menu mode to view the menu at the upper level.
- The button is also used from one position to the next when entering a numeric value.
- If [← STOP] is on display, the guidance screen can be paused.
- If [← BACK] on display, the guidance screen can be moved backward.

### 1.6.3 Operation Panel

iPF8300 / iPF8300S

This section explains the functions of the buttons and the meanings of the LEDs on the operation panel.

**[1] Display**

Printer menus, statuses, and messages are shown on this display.

**[2] [Power] button**

Use this button to turn on or off the printer.

When the printer is powered or in the sleep mode, the [Power] button lamp stays lit.

**[3] [Stop] button**

Use this button to stop execution of a job or drying ink.

**[4] [Navi] button**

Use this key to confirm the procedures for loading/unloading media, replacing an ink tank, and replacing the printhead.

**[5] Direction buttons**

- ◀ button: Pressing this button on the [tab selection screen] moves the tab. When a menu requiring you to enter a value is selected, pressing this button allows you to move to the left-hand digit.

- ▲ button: Pressing this button in a menu displays the upper item or setting value.

- ▶ button: Pressing this button on the [tab selection screen] moves the tab. When a menu requiring you to enter a value is selected, pressing this button allows you to move to the right-hand digit.

- ▼ button: Pressing this button in a menu displays the lower item or setting value.

**[6] [OK] button**

Pressing this button on the [tab selection screen] displays the menu for the displayed tab.

In the menu for a tab, pressing this button at the item preceded by [+] allows you to move to the bottom layer of menu items, where you can execute a menu item or set values. Also press this button when a message asking you to press the [OK] button is shown on the display.

**[7] [Back] button**

Pressing this button displays the preceding screen.

**[8] [Menu] button**

Pressing this button displays the [tab selection screen] screen.

**[9] [Media Cut] button**

When roll media is loaded, pressing this button cuts the media.

**[10] [Media Feed] button**

When roll media is loaded, pressing this button allows you to change the media position.

**[11] [Media Change] button**

Press this button when loading/replacing media.

**[12] [Cut Sheet] lamp (green)**

This lamp stays lit when cut sheet is selected as a media type.

**[13] [Roll Media] lamp (green)**

This lamp stays lit when roll media is selected as a media type.

**[14] Message lamp (orange)**

- Stays lit: A warning message is being displayed.

- Blinking: An error message is being displayed.

- Not lit: The printer is normal or not powered.

**[15] Data reception lamp (green)**

- Blinking: When the printer is making prints, this lamp indicates that a print job is being received or processed. When the printer is not making prints, this lamp indicates that the print job is suspended or the firmware data is being received.

- Not lit: This lamp indicates that there is no print job.

#### MEMO:

When the printer is in the sleep mode, pressing any button other than the [Power] button wakes up the printer.

## 1.6.4 Main Menu

iPF8000S / iPF8100

The printer has a Main menu which includes a menu related to maintenance such as adjustment of ink ejection position of each nozzle and head cleaning, a menu related to printing settings such as auto cutting and ink drying time, and a menu related to parameters such as a message language.

### 1. Main menu operations

#### a) How to enter the Main menu

To enter the Main menu, press the [Menu] button on the operation panel.

#### b) How to exit the Main menu

To exit the Main menu, press the [Online] button.

#### c) Buttons used with the Main menu

- Selecting menus and parameters: [ ◀ ] or [ ▶ ] button
- Going to the next lower-level menu: [ ▼ ] button
- Going to the next higher-level menu: [ ▲ ] button
- Determining a selected menu or parameter: [OK] button

## 2. Main Menu

The structure of the main menu is as follows.

\*1: Displayed if a roll is loaded.

\*2: Displayed if Chk Remain.Roll is On.

\*3: Displayed if IP Mode is Automatic.

\*4: Only these menus are displayed during printing.

\*5: For information on the types of paper the printer supports, refer to the Media Guide. The media type setting in the printer driver and related software (as well as on the Control Panel) is updated when you install Media Configuration Tool from the User Software CD-ROM or if you change paper information by using Media Configuration Tool.

\*6: Available only if Auto Detect is Off.

\*7: Available only if NetWare is On.

\*8: Follows the setting in Date Format.

\*10: Displayed if the Media Take-up Unit is attached.

\*12: Displayed if paper is loaded in the tray.

\*13: Available if: Take-up Reel is Enable, roll paper is loaded, and you have not executed Auto Feed for the loaded roll.

\*14: This menu is only displayed during printing.

\*16: Not displayed if a roll or a sheet has been fed.

### 3. Main menu during printing

The structure of the main menu during printing is as follows.

T-1-17

First Level	Second Level	Third Level	Fourth Level	Fifth Level
[Menu Durng Prtng]	[Head Cleaning]	[Head Cleaning A]		
		[Head Cleaning B]		
	[Fine Band Adj.]	-5 to 5		
	[Information]	[System Info]		
		[Error Log]	#####	
		[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name]
				[User Name]
				[Page Count]
				[Job Status]
				[Print Start Time]
				[Print End Time]
				[Print Time]
				[Print Size]

	[Psnl. BOX Ope.]	[Folder List] (Enter a password if one has been set.)	[Job List] (Choose a print job)	[Print]
				[Delete]
			[Print Job List]	[No]
				[Yes]

#### 4. Main Menu Settings

Main menu items are described in the following tables.

T-1-18

Setting Item	Description, Instructions
[Paper Cut]	Displayed if a roll is loaded. Choose Yes to cut the roll at the current position. The paper will be fed, if necessary, so that the sheet is at least 10 cm (39.4 in.) long after the cut. The paper will not be cut if there is not enough paper left to feed the paper this much.
[Rep. Ink Tank]	When replacing the Ink Tank, choose Yes and follow the instructions on the screen.
[Head Cleaning]	Specify Printhead cleaning options. Choose Head Cleaning A if printing is faint, oddly colored, or contains foreign substances. Choose Head Cleaning B if no ink is printed at all, or if printing is not improved by Head Cleaning A.
[Auto Feed]	This command is available only if Take-up Reel is set to Enable. Choose Yes to advance roll paper automatically on the Rewind Spool, up to the fastening position.
[Take-up Reel]	Choose Enable to use the Media Take-up Unit.
[Media Menu]	Specify the type and size of paper.
[Paper Details]	Specify detailed paper-related settings, including the ink drying time and borderless printing options.
[Job Management]	Manage print jobs on the printer's hard disk.
[Adjust Printer]	Adjust the Printhead alignment or amount of feed by printing a test pattern.
[Interface Setup]	Configure the EOP timer and network settings.
[Maintenance]	Access maintenance settings when replacing the Printhead or preparing to move the printer.
[System Setup]	Specify the printer system settings, including the date format and display language.
[Test Print]	Choose Status Print to print information about the printer. Choose Media Details to print the paper settings as specified in Paper Details. Choose Print Job Log to print a record of print jobs, including the paper type and size, amount of ink used, and so on. (Information on ink consumption is general, not specific in nature.) Choose Menu Map to print a list of the main menu options. Choose Nozzle Check to print a test pattern for checking the nozzles.
[Information]	Displays information about the printer and record of print jobs.

#### [Media Menu]

T-1-19

Setting Item	Description, Instructions
[Cut Sheet Type]	Choose the type of sheets.
[Roll Media Type]	Choose the type of roll.
[Chk Remain.Roll]	Choose On to print a barcode at the end of a roll before you remove it. The printed barcode can be used in managing the amount of roll paper left. Choose Off if you prefer not to print the barcode.
[Roll Length Set]	Displayed if Chk Remain.Roll is On. If a barcode is not printed on rolls, specify the roll length. The roll length is displayed in meters or feet, depending on the setting in Length Unit.

## [Paper Details]

T-1-20

Setting Item		Description, Instructions
(The paper type is displayed here.)	[Roll DryingTime]	Specify the time to wait for the ink to dry for each sheet.
	[Scan Wait Time]	Specify the time to wait for the ink to dry between each scan in bidirectional printing, in consideration of how quickly the ink dries. Note that printing will take longer if you specify a wait time.
	[Feed Priority]	Specify exact paper feeding, if desired. Normally, select Automatic. Choose Print Length if you prefer to feed the paper an exact amount. However, note that choosing Print Length may result in slight banding in the direction of Carriage scanning.
	[Adjust Length]	Displayed if Feed Priority is Print Length. Adjustment relative to the amount of stretching or shrinkage of the current paper. Enter either the adjustment results from Print Pattern or the discrepancy that you measured (as a percentage). For paper that tends to stretch, increase the feed amount by setting the adjustment value toward +. For paper that tends to shrink, decrease the feed amount by setting the adjustment value toward -.
	[Head Height]	Adjust the Printhead height.
	[Skew Check Lv.]	If you print on Japanese paper (washi) or other handmade paper that has an irregular width, choose Loose for a higher skew detection threshold, or choose Off to disable skew detection. However, if paper is loaded askew when detection is Off, note that paper jams or Platen soiling may occur.
	[VacuumStrngth]	Specify the level of suction that holds paper against the Platen.
	[Width Detection]	Make this setting when the print size is different from the media size, for example, when you want to make a print within a frame. When you select [OFF], the paper width is not detected.
	[NearEnd RollMrgn]	Specify the minimum margin at the leading edge of roll paper to ensure better printing quality at the leading edge. Note that if you choose 5mm, it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the leading edge. It may also cause the Platen to become soiled.
	[Cut Speed]	Choose the cutting speed. If you use adhesive paper, choosing Slow helps prevent adhesive from sticking to the cutter and keeps the cutter sharp.
	[Trim Edge First]	If a roll is loaded, the end of the paper will be cut.
	[Cutting Mode]	Specify whether or not to cut with the standard round-bladed cutter. Choose Automatic to have the roll cut automatically after printing. If you choose Manual, the paper will not be cut after printing. Instead, a line will be printed at the cut position. Choose Eject if you prefer not to have documents dropped immediately after printing, as when waiting for ink to dry.
	[Bordless Margin]	Adjust the margin during borderless printing. Choose Automatic to have the printer automatically detect the paper width and configure the margin settings for borderless printing. If margins are mistakenly created when Automatic is selected, choose Fixed. In this case, the paper width is not detected automatically, and the document is printed without borders, using the margin settings required by the printer.
	[CutDustReduct.]	Choose On to reduce the amount of debris generated when cutting film and similar media by printing a line at the cut position. This option reduces the amount of debris given off after cutting. It also helps prevent adhesive from sticking to the cutter and keeps the cutter sharp if you use adhesive paper.
	[NearEnd Sht Mrgn]	Specify a margin at the leading edge of sheets to ensure better printing quality at the leading edge. Note that if you choose 5mm, it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the leading edge.
	[Return Defaults]	Choose Yes to restore Paper Details to the factory default values.

**[Job Management]**

T-1-21

Setting Item				Description, Instructions
[Job Queue Ope.]	[Job List]	(Choose a print job)	[Delete]	Delete the current job or queued jobs.
			[Priority]	Print the job first after the current print job is finished printing.
[Com. BOX Ope.]	[Job List]	(Choose a print job)	[Print]	Print jobs in the Common Box.
			[Delete]	Delete jobs in the Common Box.
	[Print Job List]			Print a list of jobs in the Common Box.
[Psnl. BOX Ope.]	[Folder List]	(Enter a password if one has been set.)	[Job List]-[Print]	Print jobs in Personal Boxes.
			[Job List]-[Delete]	Delete jobs in Personal Boxes.
			[Print Job List]	Print a list of jobs in Personal Boxes.

**[Adjust Printer]**

T-1-22

Setting Item		Description, Instructions
[Auto Head Adj.]	[Standard Adj.]	Choose Yes to have the printer print and read a test pattern for the automatic adjustment of Printhead alignment relative to the printing direction.
	[Advanced Adj.]	Choose Yes to have the printer print and read a test pattern for the automatic adjustment of Printhead alignment relative to the nozzle and printing direction.
	[Auto Print]	Choose On to have the printer automatically execute the Advanced Adj. operations after you replace the Printhead.
[Manual Head Adj]		Choose Yes to print a test pattern for adjustment of Printhead alignment relative to the printing direction. Enter the adjustment value manually based on the resulting pattern.
[Auto Band Adj.]	[Standard Adj.]	Choose Yes to have the printer print and read a band adjustment test pattern for automatic adjustment of the feed amount.
	[Advanced Adj.]	Choose this option when using paper other than genuine Canon paper, or paper for purposes other than checking output. Choose Yes to have the printer print and read a band adjustment test pattern for automatic adjustment of the feed amount. Note that this function takes more time and requires more ink than Standard Adj.
[Manual Head Adj]		Choose Yes to print a test pattern for adjustment of Printhead alignment relative to the printing direction. Enter the adjustment value manually based on the resulting pattern.
[Adjust Length]		Choose Yes to print a test pattern for adjustment relative to paper stretching or shrinkage, after which you can enter the amount of adjustment.
[Calibration]	[Auto Adjust]	Select [Yes] to print a color calibration adjustment pattern and adjust the correction value automatically. This color calibration adjustment value is extended to all print tasks.
	[Execution Log]	The date of color calibration and the paper type are displayed for visual verification.
	[Use Effect Value]	Select [Disable] and press the [OK] button not to apply the color calibration correction value to printing. The printer driver setting governs. Select [Enable] and press the [OK] button to apply the color calibration correction value to printing. It is overridden by the printer driver setting, though.
	[Return Defaults]	The color calibration correction value and the execution history are cleared.

**[Interface Setup]**

T-1-23

Setting Item		Description, Instructions
[EOP Timer]		Specify the timeout period before cancellation of print jobs that cannot be received by the printer.
[TCP/IP]	[TCP/IP]	Specify the TCP/IP protocol settings. To apply your changes, choose Register Setting.
	[IP Mode]	Choose whether the printer IP address is configured automatically or a static IP address is entered manually.
	[Protocol]	Specify the protocol used to configure the IP address automatically.
	[IP Setting]	Specify the printer network information when using a static IP address.
		Enter the IP address assigned to the printer, as well as the network subnet mask and default gateway.
[NetWare]	[NetWare]	Specify the NetWare protocol. To apply your changes, choose Register Setting.
	[Frame Type]	Specify the frame type to use.
	[Print Service]	Choose the print service.
[AppleTalk]		Specify whether to use the AppleTalk protocol. To apply your changes, choose Register Setting.
[Ethernet Driver]	[Auto Detect]	Specify the communication method. To apply your changes, choose Register Setting. Choose On for automatic configuration of the LAN communication protocol. Choose Off to use settings values of Comm.Mode and Ethernet Type.
	[Comm.Mode]	Choose the LAN communication method.
	[Ethernet Type]	Choose the LAN transfer rate.
	[Spanning Tree]	Choose whether spanning-tree packets are supported over the LAN.
	[MAC Address]	Displays the MAC address.
[Ext.Interface]		When installing the expansion interface board, choose whether the expansion interface board is used.
[Init. Settings]		A confirmation message is displayed if you press the ▼ button. Choose [OK] to restore the network settings to the default values.

**[Maintenance]**

T-1-24

Setting Item	Description, Instructions
[Maint. cart.]	When exchanging the maintenance cartridge, choose Yes and follow the instructions on the screen.
[Replace P.head]	Not displayed during a warning message that the remaining Maintenance Cartridge capacity is low. When replacing the Printhead, choose Yes and follow the instructions on the screen.
[Repl. S. Cleaner]	When replacing the Shaft Cleaner, choose Yes and follow the instructions on the screen.
[Change Cutter]	When replacing the Cutter Unit, choose Yes and follow the instructions on the screen. You can also reset the cut counter after the Cutter Unit is replaced.
[Move Printer]	When transferring the printer to another location, choose the level of transfer and follow the instructions on the screen.

## [System Setup]

T-1-25

Setting Item		Description, Instructions
[Warning]	[Buzzer]	Set the buzzer. Choose On for the buzzer to sound once for warnings and three times for errors.
	[Detect Mismatch]	Choose Warning for notification (display of a warning message) during printing if the paper type specified in the printer menu does not match the paper type in the printer driver. Choose None to continue print without notification. Choose Pause to have printing paused under these circumstances. In this case, you can continue printing by pressing the Online button.
	[Skip Take-Up Err]	Choose On to continue with printing even if an error occurs with the Media Take-up Unit. Choose Off to have the printer pause before printing if a rewinding error occurs.
[Keep Media Size]		Choose On to use the paper size setting as the basis for printing instead of other settings. The margin setting of the printer menu will be used instead of the margin setting of the printer driver if the latter is smaller, which may prevent text or images in the margin from being printed. Choose Off to use the printer driver settings instead. Even if the margin setting of the printer driver is smaller than that of the printer driver, text or images will not be cut off. However, this requires longer paper because the actual margin will be equal to the margin setting of the printer driver plus the margin setting of the printer menu.
[Paper Size Basis]	[Sht Selection 1]	Select which size is to be recognized, [ISO A3+] or [13"x19"(Super B)], when the detected size of the cut sheet is between these sizes.
	[Sht Selection 2]	Select which size is to be recognized, [ISO B1] or [28"x40"(ANSI F)], when the detected size of the cut sheet is between these sizes.
[Noz. Check Freq.]		Specify the timing for automatic checks of nozzle clogging. Choose 1 page to check once per printed page. Choose 10 pages to check once per ten printed pages. Choose Automatic to have the printer automatically adjust the timing for checks based on the frequency of nozzle use.
[Sleep Timer]		Specify the period before the printer enters Sleep mode.
[Length Unit]		Choose the unit of measurement when roll length is displayed. You can switch the unit displayed for Roll Length Set and the remaining paper amount displayed in the submenu.
[Time Zone]		Specify the time zone. Time zone options indicate a main city in this time zone and the difference from Greenwich Mean Time.
[Date Format]		Specify the date format.
[Date & Time]	[Date]	Set the current date.
	[Time]	Set the current time.
[Language]		Specify the language used on the Display Screen.
[Contrast Adj.]		Adjust the Display Screen contrast level.
[Reset PaprSetngs]		Restores settings that you have changed with Media Configuration Tool to the factory default values.
[Erase HDD Data]		Erase all data on the hard disk.

## [Information]

T-1-26

Setting Item			Description, Instructions
[System Info]	[Version]	[Firmware]	Displays the version of the printer and firmware.
		[Boot]	Displays the version of the boot ROM.
		[MIT]	Displays the version of the MIT database format.
	[s/n]		Displays the printer's serial number.
	[MAC]		Displays the MAC address of the printer.
	[IP]		Displays the printer IP address.
[Error Log]	[#####-####]		Displays the most recent error messages (up to two).
[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name]	Displays the document name in the last print job.
		[User Name]	Displays the name of the user who sent the print job.
		[Page Count]	Displays the number of pages in the print job.
		[Job Status]	Displays the results of the print job processed.
		[Print Start Time]	Displays the time when the print job was started.
		[Print End Time]	Displays the time when the print job was finished.
		[Print Time]	Displays the time required to print the job.
		[Print Size]	Displays the paper size in the print job.
		[Media Type]	Displays the paper type in the print job.
		[Interface]	Displays the interface used for the print job.
[HDD Information]	[HDDSpace:]	[Ink Consumed]	Displays the ink consumption.
			Displays the space available on the printer's hard disk.

**5. Main Menu Settings (During Printing)**

Main menu items during printing are described in the following tables.

T-1-27

Setting Item	Description, Instructions
[Head Cleaning]	Specify Printhead cleaning options. Choose Head Cleaning A if printing is faint, oddly colored, or contains foreign substances. Choose Head Cleaning B if no ink is printed at all, or if printing is not improved by Head Cleaning A.
[Fine Band Adj.]	Fine-tune the feed amount manually.
[Information]	Displays information about the printer and record of print jobs.
[Job Mgmt Menu]	Perform operations related to print jobs on the printer's hard disk.

**[Information]**

T-1-28

Setting Item		Description, Instructions
[System Info]	[Version]	[Firm.] Displays the version of the printer and firmware.
		[Boot] Displays the version of the boot ROM.
		[MIT] Displays the version of the MIT database format.
	[s/n]	Displays the printer's serial number.
	[MAC]	Displays the MAC address of the printer.
	[IP]	Displays the printer IP address.
[Error Log]	[##### #####]	Displays the most recent error messages (up to two).
[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name] Displays the document name in the last print job.
		[User Name] Displays the name of the user who sent the print job.
		[Page Count] Displays the number of pages in the print job.
		[Job Status] Displays the results of the print job processed.
		[Print Start Time] Displays the time when the print job was started.
		[Print End Time] Displays the time when the print job was finished.
		[Print Time] Displays the time required to print the job.
		[Print Size] Displays the paper size in the print job.
		[Media Type] Displays the paper type in the print job.
		[Interface] Displays the interface used for the print job.
		[Ink Consumed] Displays the ink consumption.
[HDD Information]	[HDDSpace:]	Displays the space available on the printer's hard disk.

## [Job Management]

T-1-29

Setting Item			Description, Instructions
[System Info]	[Version]	[Firm.]	Displays the version of the printer and firmware.
		[Boot]	Displays the version of the boot ROM.
		[MIT]	Displays the version of the MIT database format.
	[s/n]		Displays the printer's serial number.
	[MAC]		Displays the MAC address of the printer.
	[IP]		Displays the printer IP address.
[Error Log]	[#####-####]		Displays the most recent error messages (up to two).
[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name]	Displays the document name in the last print job.
		[User Name]	Displays the name of the user who sent the print job.
		[Page Count]	Displays the number of pages in the print job.
		[Job Status]	Displays the results of the print job processed.
		[Print Start Time]	Displays the time when the print job was started.
		[Print End Time]	Displays the time when the print job was finished.
		[Print Time]	Displays the time required to print the job.
		[Print Size]	Displays the paper size in the print job.
		[Media Type]	Displays the paper type in the print job.
		[Interface]	Displays the interface used for the print job.
		[Ink Consumed]	Displays the ink consumption.
[HDD Information]	[HDDSpace:]		Displays the space available on the printer's hard disk.

6. Color calibration print chart

The following chart (sample) is printed when executing "Calibration".

F-1-44

---

## 1.6.5 Main Menu

iPF8000

The printer has a Main Menu which provides the user with access to various adjusting and configuring features, for example: adjusting print position; performing cleaning or other maintenance features; auto-cutting, ink drying time and other print settings; message language and other parameter settings.

### 1. Main menu operations

#### a) How to enter the Main menu

To enter the Main menu, press the [Menu] button on the operation panel.

#### b) How to exit the Main menu

To exit the Main menu, press the [Online] button.

#### c) Buttons used with the Main menu

- Selecting menus and parameters: [◀] or [▶] button
- Going to the next lower-level menu: [▼] button
- Going to the next higher-level menu: [▲] button
- Determining a selected menu or parameter: [OK] button

## 2. Map of the main menu

The hierarchy of menus and parameters in the Main Menu is as shown below. Values at right indicated by an asterisk "\*" are the defaults.

First Level	Second Level	Third Level	Fourth Level	Fifth Level

\*1: Available only if a roll is loaded.

\*2: Available only if Chk Remain.Roll is On .

\*3: Available if Feed Priority is Automatic or Print Length .

\*4: Available only if IP Mode is Automatic .

\*5: For information on the types of paper the printer supports, refer to the Media Guide .The paper type setting in the printer driver and related software (as well as on the Control Panel ) is updated when you install the printer driver from the User Software CD-ROM or if you change paper information by using the Media Configuration Tool .

\*6: Available only if NetWare is On .

\*7: Available only if Auto Detect is Off .

\*8: Follows the setting in Date Format .

\*10: Displayed if the Media Take-up Unit is attached.

\*12: Available after you have used Advanced Adj. in Auto Head Adj. once.

\*13: Available if: (a) Take-up Reel is Enable , (b) roll paper is loaded, and (c) you have not executed Auto Feed for the loaded roll.

\*14: Not displayed if IP Mode is Automatic .

\*16: Follows the setting in Length Unit .

**3. Main menu during printing**

The structure of the main menu during printing is as follows.

First Level	Second Level	Third Level	Fourth Level	Fifth Level
[Menu Durng Prtng]	[Head Cleaning]	[Head Cleaning A]		
		[Head Cleaning B]		
	[Fine Band Adj.]	-5 to 5		
	[Information]	[System Info]		
		[Error Log]	##### ####	
		[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name]
				[User Name]
				[Page Count]
				[Job Status]
				[Print Start Time]
				[Print End Time]
				[Print Time]
				[Print Size]
				[Media Type]
				[Interface]
				[Ink Consumed]

#### 4. Main Menu Settings

Main menu items are described in the following tables.

Setting Item	Description, Instructions
[Paper Cut]	This command is available only if a roll is loaded. Choose Yes to cut the roll at the current position. However, if paper cannot be advanced to the cut position, it will not be cut. In this case, manually advance the roll before cutting it.
[Rep. Ink Tank]	When replacing the Ink Tank , choose Yes and follow the instructions on the screen.
[Head Cleaning]	Specify Printhead cleaning options. Choose Head Cleaning A if printing is faint, oddly colored, or contains foreign substances. Choose Head Cleaning B if no ink is printed at all, or if printing is not improved by Head Cleaning A .
[Auto Feed]	This command is available only if Take-up Reel is set to Enable . Choose Yes to advance roll paper automatically on the Rewind Spool , up to the fastening position.
[Take-up Reel]	Choose Enable to use the Media Take-up Unit .
[Media Menu]	Specify the type and size of paper.
[Paper Details]	Specify detailed paper-related settings, including the ink drying time and borderless printing options.
[Adjust Printer]	Adjust the Printhead alignment or amount of feed by printing a test pattern.
[Interface Setup]	Configure the EOP timer and network settings.
[Maintenance]	Access maintenance settings when replacing the Printhead or preparing to move the printer.
[System Setup]	Specify the printer system settings, including the date format and display language.
[Test Print]	Choose Status Print to print information about the printer. Choose Media Details to print the paper settings as specified in Paper Details . Choose Print Job Log to print a record of print jobs, including the paper type and size, amount of ink used, and so on. (Information on ink consumption is general, not specific in nature.) Choose Menu Map to print a list of the main menu options. Choose Nozzle Check to print a test pattern for checking the nozzles.
[Information]	Displays information about the printer and record of print jobs.

#### [Media Menu]

Setting Item	Description, Instructions
[Cut Sheet Type]	Choose the type of sheets.
[Roll Media Type]	Choose the type of roll.
[Chk Remain.Roll]	Choose On to print a barcode at the end of a roll before you remove it. The printed barcode can be used in managing the amount of roll paper left. Choose Off if you prefer not to print the barcode.
[Roll Length Set]	Displayed if Chk Remain.Roll is On . If a barcode is not printed on rolls, specify the roll length. The roll length is displayed in meters or feet, depending on the setting in Length Unit .

## [Paper Details]

Setting Item		Description, Instructions
(The paper type is displayed here.)	[Roll DryingTime]	Specify the time to wait for the ink to dry for each sheet.
	[Scan Wait Time]	Specify the time to wait for the ink to dry between each scan in bidirectional printing, in consideration of how quickly the ink dries. Note that printing will take longer if you specify a wait time.
	[Feed Priority]	Specify exact paper feeding, if desired. Normally, select Automatic . Choose Print Length if you prefer to feed the paper an exact amount. However, note that choosing Print Length may result in slight banding in the direction of Carriage scanning.
	[Adjust Length]	Displayed if Feed Priority is Print Length . Adjustment relative to the amount of stretching or shrinkage of the current paper. Enter either the adjustment results from Print Pattern or the discrepancy that you measured (as a percentage). For paper that tends to stretch, increase the feed amount by setting the adjustment value toward +. For paper that tends to shrink, decrease the feed amount by setting the adjustment value toward -.
	[Head Height]	Adjust the Printhead height.
	[Skew Check Lv.]	If you print on Japanese paper (washi) or other handmade paper that has an irregular width, choose Loose for a higher skew detection threshold, or choose Off to disable skew detection. However, if paper is loaded askew when detection is Off , note that paper jams or Platen soiling may occur.
	[VacuumStrngth]	Specify the level of suction that holds paper against the Platen .
	[Width Detection]	If you print on Japanese paper (washi) or other handmade paper that has an irregular width, choose Off to disable width detection. If you choose Off , after specifying the paper type, you must specify the paper width as follows. If the width is not specified correctly, it may cause Platen soiling.
	[NearEnd RollMrgn]	Specify the minimum margin at the leading edge of roll paper to ensure better printing quality at the leading edge. Note that if you choose 5mm , it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the leading edge. It may also cause the Platen to become soiled.
	[Cut Speed]	Choose the cutting speed. If you use adhesive paper, choosing Slow helps prevent adhesive from sticking to the cutter and keeps the cutter sharp.
	[Trim Edge First]	If a roll is loaded, the end of the paper will be cut.
	[Cutting Mode]	Specify whether or not to cut with the standard round-bladed cutter. Choose Automatic to have the roll cut automatically after printing. If you choose Eject , the paper is cut after you hold down the Stop button for a second or more. If you choose Manual , the paper will not be cut after printing. Instead, a line will be printed at the cut position.
	[Bordless Margin]	Adjust the margin during borderless printing. Choose Automatic to have the printer automatically detect the paper width and configure the margin settings for borderless printing. If margins are mistakenly created when Automatic is selected, choose Fixed . In this case, the paper width is not detected automatically, and the document is printed without borders, using the margin settings required by the printer.
	[CutDustReduct.]	Choose On to reduce the amount of debris generated when cutting film and similar media by printing a line at the cut position. This option reduces the amount of debris given off after cutting. It also helps prevent adhesive from sticking to the cutter and keeps the cutter sharp if you use adhesive paper.
	[NearEnd Sht Mrgn]	Specify a margin at the leading edge of sheets to ensure better printing quality at the leading edge. Note that if you choose 5mm , it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the leading edge.
	[Return Defaults]	Choose Yes to restore Paper Details to the factory default values.

## [Adjust Printer]

Setting Item		Description, Instructions
[Auto Head Adj.]	[Standard Adj.]	Choose Yes to have the printer print and read a test pattern for the automatic adjustment of Printhead alignment relative to the printing direction.
	[Advanced Adj.]	Choose Yes to have the printer print and read a test pattern for the automatic adjustment of Printhead alignment relative to the nozzle and printing direction.
	[Auto Print]	Choose On to have the printer automatically execute the Advanced Adj. operations after you replace the Printhead .
[Manual Head Adj]		Choose Yes to print a test pattern for adjustment of Printhead alignment relative to the printing direction. Enter the adjustment value manually based on the resulting pattern.
[Auto Band Adj.]	[Standard Adj.]	Choose Yes to have the printer print and read a band adjustment test pattern for automatic adjustment of the feed amount.
	[Advanced Adj.]	Choose this option when using paper other than genuine Canon paper, or paper for purposes other than checking output. Choose Yes to have the printer print and read a band adjustment test pattern for automatic adjustment of the feed amount. Note that this function takes more time and requires more ink than Standard Adj.
[Manual Band Adj]		Choose Yes to print a test pattern for adjusting the feed amount based on the paper type.
[Adjust Length]		Choose Yes to print a test pattern for adjustment relative to paper stretching or shrinkage, after which you can enter the amount of adjustment.

**[Interface Setup]**

Setting Item			Description, Instructions
[EOP Timer]			Specify the timeout period before cancellation of print jobs that cannot be received by the printer.
[TCP/IP]	[TCP/IP]		Specify the TCP/IP protocol settings. To apply your changes, choose Register Setting .
	[IP Mode]		Choose whether the printer IP address is configured automatically or a static IP address is entered manually.
	[Protocol]	[DHCP]	Specify the protocol used to configure the IP address automatically.
		[BOOTP]	
		[RARP]	
	[IP Setting]	[IP Address]	Specify the printer network information when using a static IP address. Enter the IP address assigned to the printer, as well as the network subnet mask and default gateway.
		[Subnet Mask]	
		[Default G/W]	
[NetWare]	[NetWare]		Specify the NetWare protocol. To apply your changes, choose Register Setting .
	[Frame Type]		Specify the frame type to use.
	[Print Service]		Choose the print service.
[AppleTalk]			Specify whether to use the AppleTalk protocol. To apply your changes, choose Register Setting .
[Ethernet Driver]	[Auto Detect]		Specify the communication method. To apply your changes, choose Register Setting . Choose On for automatic configuration of the LAN communication protocol. Choose Off to use settings values of Comm.Mode and Ethernet Type .
	[Comm.Mode]		Choose the LAN communication method.
	[Ethernet Type]		Choose the LAN transfer rate.
	[Spanning Tree]		Choose whether spanning-tree packets are supported over the LAN.
[Init. Settings]			Displays the MAC address.
			A confirmation message is displayed if you press the ▼ button. Choose [OK] to restore the network settings to the default values.

**[Maintenance]**

Setting Item	Description, Instructions
[Maint. cart.]	When replacing the Maintenance Cartridge , choose Yes and follow the instructions on the screen.
[Replace P.head]	Not displayed during a warning message that the remaining Maintenance Cartridge capacity is low. When replacing the Printhead , choose Yes and follow the instructions on the screen.
[Repl. S. Cleaner]	When replacing the Shaft Cleaner , choose Yes and follow the instructions on the screen.
[Change Cutter]	When replacing the Cutter Unit , choose Yes and follow the instructions on the screen. You can also reset the cut counter after the Cutter Unit is replaced.
[Move Printer]	When transferring the printer to another location, choose the level of transfer and follow the instructions on the screen.

**[System Setup]**

Setting Item		Description, Instructions
[Warning]	[Buzzer]	Set the buzzer. Choose On for the buzzer to sound once for warnings and three times for errors.
	[Detect Mismatch]	Choose Warning for notification (display of a warning message) during printing if the paper type specified in the printer menu does not match the paper type in the printer driver. Choose None to continue print without notification. Choose Pause to have printing paused under these circumstances. In this case, you can continue printing by pressing the Online button.
	[Skip Take-Up Err]	Choose On to continue with printing even if an error occurs with the Media Take-up Unit. Choose Off to have the printer pause before printing if a rewinding error occurs.
[Keep Media Size]		Choose On to use the paper size setting as the basis for printing instead of other settings. The margin setting of the printer menu will be used instead of the margin setting of the printer driver if the latter is smaller, which may prevent text or images in the margin from being printed. Choose Off to use the printer driver settings instead. Even if the margin setting of the printer driver is smaller than that of the printer driver, text or images will not be cut off. However, this requires longer paper because the actual margin will be equal to the margin setting of the printer driver plus the margin setting of the printer menu.
[Paper Size Basis]	[Sht Selection 1]	If sheet size detection is activated, choose whether ISO A3+ or ANSI B Super is applied when an intermediate size is detected.
	[Sht Selection 2]	If sheet size detection is activated, choose whether ISO B1 or ANSI F is applied when an intermediate size is detected.
[Noz. Check Freq.]		Specify the timing for automatic checks of nozzle clogging. Choose 1 page to check once per printed page. Choose 10 pages to check once per ten printed pages. Choose Automatic to have the printer automatically adjust the timing for checks based on the frequency of nozzle use.
[Sleep Timer]		Specify the period before the printer enters Sleep mode.
[Length Unit]		Choose the unit of measurement when roll length is displayed. You can switch the unit displayed for Roll Length Set and the remaining paper amount displayed in the submenu.
[Time Zone]		Specify the time zone. Time zone options indicate a main city in this time zone and the difference from Greenwich Mean Time.
[Date Format]		Specify the date format.
[Date & Time]	[Date]	Set the current date.
	[Time]	Set the current time.
[Language]		Specify the language used on the Display Screen.
[Contrast Adj.]		Adjust the Display Screen contrast level.
[Reset PaprSetngs]		Restores settings that you have changed with Media Configuration Tool to the factory default values.

**[Information]**

Setting Item			Description, Instructions
[System Info]	[Firm. Ver. ##.##]		Displays the version of the printer and firmware.
	[Boot##.##]		Displays the version of the boot ROM.
	[MIT##.##]		Displays the version of the MIT database format.
	[IP:]		Displays the printer's IP address.
	[Ext.Interface]		Displays the name of interfaces compatible with the expansion slot.
	[s/n: ]		Displays the printer's serial number.
[Error Log]	[#####. #####]		Displays the most recent error messages (up to two).
[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name]	Displays the document name in the last print job.
		[User Name]	Displays the name of the user who sent the print job.
		[Page Count]	Displays the number of pages in the print job.
		[Job Status]	Displays the results of the print job processed.
		[Print Start Time]	Displays the time when the print job was started.
		[Print End Time]	Displays the time when the print job was finished.
		[Print Time]	Displays the time required to print the job.
		[Print Size]	Displays the paper size in the print job.
		[Media Type]	Displays the paper type in the print job.
		[Interface]	Displays the interface used for the print job.
		[Ink Consumed]	Displays the ink consumption.

## 5. Main Menu Settings (During Printing)

Main menu items during printing are described in the following tables.

Setting Item	Description, Instructions
[Head Cleaning]	Specify Printhead cleaning options. Choose Head Cleaning A if printing is faint, oddly colored, or contains foreign substances. Choose Head Cleaning B if no ink is printed at all, or if printing is not improved by Head Cleaning A .
[Fine Band Adj.]	Fine-tune the feed amount manually.
[Information]	Displays information about the printer and record of print jobs.

### 1.6.6 Display

iPF8300 / iPF8300S

When the printer starts, the [tab selection screen] appears on the display.

There are four types of tabs on which the relevant printer status, menu, and error information are displayed.

The tab appears as the icon to the top field of display. The tab moves by ◀ key or ▶ key.

F-1-45

#### [1] Media tab

This tab shows the printer status and menu related to media. When this tab is shown in reverse video, pressing the [OK] button displays the [Media] menu.

- [A] Top field of display: Shows the media icon in reverse video.
- [B] Middle field of display: Shows the printer status and a menu name.
- [C] Bottom field of display: Shows the media type in the first row and the media size in the second row.

#### [2] Ink tab

This tab shows the printer status and menu related to ink. When this tab is shown in reverse video, pressing the [OK] button displays the [Ink] menu.

- [A] Top field of display: Shows the ink icon in reverse video.
- [B] Middle field of display: Shows the printer status and a menu name.
- [C] Bottom field of display: Shows the remaining ink levels of the ink tanks loaded in the printer.

#### [3] Job tab

This tab shows the printer status and menu related to the print job. When this tab is shown in reverse video, pressing the [OK] button displays the [Job] menu.

- [A] Top field of display: Shows the job icon in reverse video.
- [B] Middle field of display: Shows the printer status and a menu name.

#### [4] Setup/Adjustment tab

This tab shows the printer status and menu related to setup/adjustment. When this tab is shown in reverse video, pressing the [OK] button displays the [Setup/Adjustment] menu.

- [A] Top field of display: Shows the setup/adjustment icon in reverse video.
- [B] Middle field of display: Shows the printer status and a menu name.
- [C] Bottom field of display: Shows the remaining ink level of the maintenance cartridge.

## 1.6.7 Menu

iPF8300

The printer has a Main menu which includes a menu related to maintenance such as adjustment of ink ejection position of each nozzle and head cleaning, a menu related to printing settings such as auto cutting and ink drying time, and a menu related to parameters such as a message language.

### 1. Menu Operation

#### a) Displaying menu on each tab

Press the ◀ key or ▶ key on the [Tab Selection] screen to select a tab, and press the [OK] key.

A menu associated with each tab is displayed.

Press the ▲ key or ▼ key to select a menu and press the [OK] key.

The menu is selected and menu items are displayed.

Select a menu with [+] on the left side and press the [OK] key to navigate to lower level menus.

#### b) Setting menu items

Press the ▲ key or ▼ key to select an item to set and press the [OK] key.

The item is checked on the left side check box to confirm that it is set.

After 2 seconds, the menu that is one level above is displayed.

#### c) Setting numeric value for a menu item

Proceed as follows to set a numeric value for an item such as network settings.

1. Press the ◀ key or ▶ key to move the underscore to the field you want to enter a numeric value.
2. Press the ▲ key or ▼ key to enter a numeric value.
3. Repeat steps 1 and 2 and press the [OK] key when finished.

**2. Main Menu**

The structure and settings of the main menu is as follows. The asterisk mark "\*" is default setting.

**[Paper Menu]**

\*1: Available only if ManageRemainRoll is On.

\*2: Available only if Width Detection is set to Off.

\*3: Available after Auto(Advanced) in Head Posi. Adj. has been used once.

\*4: Available when you have specified Feed Priority > Adj. Priority > Automatic or Print Quality.

\*5: Available when you have specified Feed Priority > Adj. Priority > Automatic or Print Length.

\*6: Displayed if a sheet is loaded in the printer.

\*7: Not shown if you have set IPv4 Mode to Manual.

\*8: Not shown if you have set NetWare to Off.

\*9: Not displayed if IPv6 Support is Off.

\*10: Not shown if you have set Auto Detect to On.

\*11: Print Anyway is displayed when a job being held is selected.

\*12: Viewing and configuration is possible for administrators, and only viewing for other users.

\*13: Viewing and configuration is possible for administrators only.

\*14: Follows the setting in Date Format.

\*15: Displayed only when the Media Take-up Unit is attached.

\*16: Available if: Use Take-up Reel is Enable, roll paper is loaded, and you have not executed Auto Feed for the loaded roll.

\*17: Available when Use Take-up Reel is Enable.

3. Main menu during printing

The structure of the main menu during printing is as follows.

T-1-39

First Level	Second Level	Third Level	Fourth Level	Fifth Level
[Adj. Fine Feed]				
[Printer Info]	[Paper Info]			
	[Ink Info]			
	[Head Info]			
	[System Info]			
	[Error Log]			
	[Other Counter]			

#### 4. Main Menu Settings

Main menu items are described in the following tables.

##### [Paper Menu]

T-1-40

Setting Item		Description/Instructions
[Load Paper]		Select either roll paper or cut sheet.
[Eject Paper]		Choose this item before removing loaded paper.
[Chg. Paper Type]		Change currently set paper type.
[Chg. Paper Size]		Change currently set paper size.
[ManageRemainRoll]		Choose On to print a barcode at the end of a roll before you remove it. The printed barcode can be used in managing the amount of roll paper left. ChooseOff if you prefer not to print the barcode.
[Paper Details] (The paper type is displayed here.)	[Head Height]	Adjust the Printhead height.
	[Skew Check Lv.]	If you print on the paper that has an irregular width, choose Loose for a higher skew detection threshold, or choose Off to disable skew detection. However, if paper is loaded askew when detection is Off, note that paper jams or Platen soiling may occur.
	[Cutting Mode]	Select whether to use standard round blade cutter or not. Select [Automatic] to cut paper after printing. Select [Manual] to print a line at the cut position after printing without cutting. Select [Eject] to prevent the printout from dropping until the ink dries after printing.
	[Cut Speed]	Choose the cutting speed. If you use adhesive paper, choosing Slow helps prevent adhesive from sticking to the cutter and keeps the cutter sharp.
	[Trim Edge First]	If a roll is loaded, the end of the paper will be cut.
	[CutDustReduct.]	Choose On to reduce the amount of debris generated when cutting film and similar media by printing a line at the cut position. This option reduces the amount of debris given off after cutting. It also helps prevent adhesive from sticking to the cutter and keeps the cutter sharp if you use adhesive paper.
	[VacuumStrngth]	Specify the level of suction that holds paper against the Platen.
	[Scan Wait Time]	Specify the time to wait for the ink to dry between each scan in bidirectional printing, in consideration of how quickly the ink dries. Note that printing will take longer if you specify a wait time.
	[Roll DryingTime]	Specify the time to wait for the ink to dry for each sheet.
	[NearEnd RollMrgn]	Specify the minimum margin at the leading edge of roll paper to ensure better printing quality at the leading edge. Note that if you choose 3mm, it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the leading edge. It may also cause the Platen to become soiled.
	[NearEnd Sht Mrgn]	Specify a margin at the leading edge of sheets to ensure better printing quality at the leading edge. Note that if you choose 3mm, it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the leading edge.
	[Bordless Margin]	Adjust the margin during borderless printing. Choose Automatic to have the printer automatically detect the paper width and configure the margin settings for borderless printing. If margins are mistakenly created when Automatic is selected, choose Fixed. In this case, the paper width is not detected automatically, and the document is printed without borders, using the margin settings required by the printer.
	[Width Detection]	Make this setting when the print size is different from the media size, for example, when you want to make a print within a frame. When you select [OFF], the paper width is not detected.
[Return Defaults]		Choose OK to restore Paper Details to the factory default values.
[Print Paper Detail]		Print the paper settings set with [Paper Details].
[Keep Paper Type]		Select [On] to continue using the same type of paper.

**[Ink Menu]**

T-1-41

Setting Item	Description/Instructions
[Rep. Ink Tank]	When replacing the Ink Tank, choose Yes and follow the instructions on the screen.
[Head Cleaning A]	Specify Printhead cleaning options. Execute Head Cleaning A if printing is faint, oddly colored, or contains foreign substances.

**[Job Menu]**

T-1-42

Setting Item				Description/Instructions
[Print Job]	[Job List]	(Select Print Job.)	[Delete]	Delete the current job or queued jobs.
			[Preempt Jobs]	Print the job first after the current print job is finished printing.
[Stored Job]	[Mailbox List]	(Enter a password if one has been set.)	[Job List]-[Print]	Prints a saved job.
			[Job List]-[Delete]	Deletes a saved job.
			[Print Job List]	Prints a list of saved jobs.
[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name]		Indicates the document name of the selected print job.
		[User Name]		Indicates the name of the user who sent the print job.
		[Page Count]		Indicates the number of pages in the job.
		[Job Status]		Indicates the printing results.
		[Print Start Time]		Indicates when the print job was started.
		[Print End Time]		Indicates when the print job was finished.
		[Print Time]		Indicates the time required to print the job.
		[Print Size]		Indicates the paper size in the print job.
		[Media Type]		Indicates the type of paper in the print job.
		[Interface]		Indicates the interface used for the print job.
[Ink Consumed]		Indicates a rough estimate of how much ink was consumed per job.		
[Print Job Log]				Print the print job information such as paper type, size, and ink consumption. Ink consumption is the approximate amount of ink used to print one sheet.
[Pause Print]				Select [On] to stop printing.
[HDD Information]				Indicates the total hard disk capacity and the mail box free space.

## [Set./Adj. Menu]

T-1-43

Setting Item			Description/Instructions
[Test Print]	[Nozzle Check]		Print a nozzle check pattern.
	[Status Print]		Print the printer information.
	[Interface Print]		Print the interface settings.
	[Paper Details]		Prints the paper settings set with [Paper Details].
	[Print Job Log]		Print print job information such as paper type, size, and ink consumption. Ink consumption is the approximate amount of ink used to print one sheet.
	[Menu Map]		Print the menu list.
[Adjust Printer]	[Head Posi. Adj.]	[Auto(Standard)]	The printer prints and reads a test pattern for automatic adjustment of Printhead alignment relative to the printing direction.
		[Auto(Advanced)]	The printer prints and reads a test pattern for automatic adjustment of Printhead alignment relative to the printing direction and spacing between nozzles and colors. Adjustment is performed at a higher level of precision than Auto(Advanced). Try adjustment in this mode if "Auto(Standard)" does not improve printing.
		[Auto(Expansion)]	The printer prints and reads a test pattern for automatic adjustment of Printhead alignment relative to the printing direction and spacing between nozzles and colors. Adjustment is performed at a higher level of precision than Auto(Advanced). Try adjustment in this mode if vertical lines are warped or colors are out of alignment when the printer driver option "High-Precision Printing" or "Priority on dot placement accuracy" is selected.
		[Manual]	Print a test pattern for adjustment of Printhead alignment relative to the printing direction. Enter the adjustment value manually based on the resulting pattern.
	[Feed Priority]	[Adj. Priority]	Set the priority feed precision. Normally select [Automatic]. Select [Print Quality] to print at high quality. Select [Print Quality] to reduce horizontal streaks. Select [Print Length] to accurately control the feed amount. However, selecting [Print Length] may cause colors to become slightly uneven in the carriage scan direction.
		[Automatic]	
		[Print Quality]	
	[Adj. Quality]	[Print Length]	Set when using paper described in the paper reference guide. A pattern to adjust the paper feed amount is printed, and the feed amount is automatically adjusted from the printed result.
		[Auto(GenuinePpr)]	
		[Auto(OtherPaper)]	
	[Adjust Length]	[Manual]	Set when using paper not described in the paper reference guide. A pattern to adjust the paper feed amount is printed, and the feed amount is automatically adjusted from the printed result. This takes longer than [Auto (GenuinePpr)] to print and consumes more ink.
		[AdjustmentPrint]-[A:High]/[B:Standard/Draft]	Select for paper that cannot be adjusted by [Auto(GenuinePpr)] or [Auto(OtherPaper)], such as highly transparent paper. Print a pattern to adjust the paper feed amount according to the type of paper.
		[Change Settings]-[A:High]/[B:Standard/Draft]	Print a test pattern for adjustment relative to paper stretching or shrinkage, after which you can enter the amount of adjustment.
	[Adj. Fine Feed]		Displayed when [Print Length] is selected as [Adj. Priority] for [Feed Priority]. Adjust the expansion rate of the currently loaded paper. Enter the result adjusted with [AdjustmentPrint] or the difference with your own measurement in %. Increase the adjustment value to increase the feed amount for paper that tends to expand, and reduce it for paper that tends to shrink.
	[Calibration]		Displayed when you have selected Feed Priority > Adj. Priority > Automatic or Print Quality. Fine-tune the feed amount manually during printing.
	[Calibration]	[Auto Adjust]	Choose Yes for automatic adjustment of the adjustment value after a test pattern for color calibration is printed. The new color calibration adjustment value is applied in all print jobs.
		[Calibration Log]	Check the date when color calibration was executed, as well as the type of paper used, as shown on the Display Screen.
		[Use Adj. Value]	Choose Disabled >OK if you prefer not to apply the color calibration adjustment value in print jobs. The printer driver settings will be used instead. Choose Enabled >OK to apply the color calibration adjustment value in print jobs. However, printer driver settings are given priority.
	[Return Defaults]		Clear the color calibration adjustment value and the execution log.
[Maintenance]	[Head Cleaning]		Specify Printhead cleaning options. Choose Head Cleaning A if printing is faint, oddly colored, or contains foreign substances. Choose Head Cleaning B if no ink is printed at all, or if printing is not improved by Head Cleaning A.
	[Nozzle Check]		Print a nozzle check pattern.
	[Replace P.head]		Not displayed during a warning message that the remaining Maintenance Cartridge capacity is low. When replacing the Printhead, choose Yes and follow the instructions on the screen.
	[Repl. maint cart]		When exchanging the maintenance cartridge, choose Yes and follow the instructions on the screen.
	[Repl. S. Cleaner]		When replacing the Shaft Cleaner, choose Yes and follow the instructions on the screen.
	[Change Cutter]		When transferring the printer to another location, choose the level of transfer and follow the instructions on the screen.

Setting Item				Description/Instructions	
[Interface Setup]	[EOP Timer]			Specify the timeout period before cancellation of print jobs that cannot be received by the printer.	
	[TCP/IP]	[IPv4]	[IPv4 Mode]		Choose whether the printer IP address is configured automatically or a static IP address is entered manually.
			[Protocol]	[DHCP]/ [BOOTP]/ [RARP]	Specify the protocol used to configure the IP address automatically.
			[IPv4 Settings]	[IP Address]/ [Subnet Mask]/ [Default G/W]	Specify the printer network information when using a static IP address. Enter the IP address assigned to the printer, as well as the network subnet mask and default gateway.
			[DNS Settings]	[DNS Dync update]	Specify whether DNS server registration is updated automatically.
				[Pri. DNS SrvAddr]/[Sec. DNS SrvAddr]	Specify the DNS server address.
				[DNS Host Name]	Specify the DNS host name.
				[DNS Domain Name]	Specify the DNS domain name.
			[IPv6]	[IPv6 Support]	
		[IPv6 StlessAdrrs]		Set whether to use IPv6 stateless address.	
		[DHCPv6]		Set whether to use DHCPv6 setting.	
		[DNS Settings]		[DNS Dync update]- [Statefull Addr]/ [Stateless Addr]	Specify whether DNS server registration is updated automatically.
				[Pri. DNS SrvAddr]/[Sec. DNS SrvAddr]	Specify the DNS server address.
				[DNS Host Name]	Specify the DNS host name.
			[DNS Domain Name]	Specify the DNS domain name.	
	[NetWare]	[NetWare]			Specify the NetWare protocol. To apply your changes, choose Register Setting.
		[Frame Type]			Specify the frame type to use.
		[Print Service]			Choose the print service.
	[AppleTalk]				Specify whether to use the AppleTalk protocol. To apply your changes, choose Register Setting.
	[Ethernet Driver]*12	[Auto Detect]			Specify the communication method. To apply your changes, choose Register Setting. Choose On for automatic configuration of the LAN communication protocol. Choose Off to use settings values of Comm.Mode and Ethernet Type.
		[Comm.Mode]			Choose the LAN communication method.
		[Ethernet Type]			Choose the LAN transfer rate.
		[Spanning Tree]			Choose whether spanning-tree packets are supported over the LAN.
		[MAC Address]			Displays the MAC address.
	[Interface Print]				Print the interface settings.
	[Return Defaults]				Select [OK] to return the [Interface Setup] settings to factory default.

T-1-45

Setting Item			Description/Instructions
[System Setup]	[Sleep Timer]		Specify the period before the printer enters Sleep mode.
	[Buzzer]		Set the buzzer. Choose On for the buzzer to sound once for warnings and three times for errors.
	[Contrast Adj.]		Adjust the Display Screen contrast level.
	[Date & Time]	[Date]	Set the current date.
		[Time]	Set the current time. This can be set only when [Date] is set.
	[Date Format]		Specify the date format.
	[Language]		Specify the language used on the Display Screen.
	[Time Zone]		Specify the time zone. Time zone options indicate a main city in this time zone and the difference from Greenwich Mean Time.
	[Length Unit]		Choose the unit of measurement when roll length is displayed. You can switch the unit displayed for the remaining paper amount.
	[Detect Mismatch]		Set the printing behavior when the paper type and size set with the printer menu does not match the paper type and size set with the printer driver. Select [Pause] to pause printing. Select [Warning] to print a warning and continue printing. Select [None] to continue printing without displaying a warning. Select [Hold Job] to queue the job with different paper type and size in a job queue on the hard disk.
	[Paper Size Basis]	[Sht Selection 1]	Select which size is to be recognized, [ISO A3+] or [13"x19"(Super B)], when the detected size of the cut sheet is between these sizes.
		[Sht Selection 2]	Select which size is to be recognized, [ISO B1] or [28"x40"(ANSI F)], when the detected size of the cut sheet is between these sizes.
	[Keep Paper Size]		Select [On] to give priority to paper size. If the margin set with the printer driver is less than the margin set with the printer menu, the margin set with the printer menu has priority and text and images extending beyond the margins are truncated. Select [Off] to give priority to margin settings. If the margins set with the printer driver and the margins set with the printer menu are different, the larger settings are used for printing.
	[Rep.P.head Print]		Select [On] to automatically perform [Adjust Detail] after replacing the Printhead.
[Nozzle Check]		Set with [Frequency] the timing to check for nozzle clogging after printing. Select [Standard] to adjust the checking timing according to the nozzle usage. Select [1 page] to check after each page. Select [On] for [Warning] to display a warning when the print head nozzle is clogged while printing.	
[Use RemoteUI]		Select [Off] to disable access from RemoteUI and enable setting only from the operation panel.	
[Reset PaprSetngs]		Restores settings that you have changed with Media Configuration Tool to the factory default values.	

Setting Item			Description/Instructions
[System Setup]	[Erase HDD Data]	[High Speed]	Delete the file management information of the saved data in the HDD.
		[Secure High Spd.]	Overwrite the random data in the whole of the hard disk drive.
		[Secure]	Overwrite 00 and FF and random data in the whole of the hard disk drive once at a time. Execute the verify check whether the data has written correctly to the hard disk drive.
	[Output Method]	[Print]	Select the output method of jobs sent from software other than the printer driver. This can be set from the printer if you are using a printer driver.
		[Print (Auto Del)]	Select [Print] to print normally. Select [Print (AutoDel)] to print and delete the data in hard disk. Select [Save: Box XX] to save to box without printing.
		[Save: Box XX]	
	[Print After Recv]		Setting of jobs sent from software other than the printer driver. This can be set from the printer if you are using a printer driver. Select [On] to print after saving.
	[Save: Shared Box]		Select [Off] to print without saving to a common box.
[Take-up Reel]	[Use Take-up Reel]		Choose Enable to use the Media Take-up Unit.
	[Auto Feed]		This command is available only if Take-up Reel is set to Enable. Choose Yes to advance roll paper automatically on the Rewind Spool, up to the fastening position.
	[Skip Take-Up Err]		Choose On to continue with printing even if an error occurs with the Media Take-up Unit. Choose Off to have the printer pause before printing if a rewinding error occurs.
[Prep.MovePrinter]	[Level 1]		Select when moving the printer. Follow the instruction on the screen and perform the necessary process.
	[Level 2]		This is not displayed when displaying a warning message about the amount remaining
	[Level 3]		maintenance cartridge.
[Admin. Menu]	[Change Password]		Set a password to restrict displaying/setting of menus as follows. Allowed value is from 0 to 99999999. - Allow only administrator to display/set [IPv4] [Change Password] [Init.Admin.Pswd] - Allow administrator to display/set and non-administrator to display only [Interface Setup](exclude [IPv4]) [Date & Time] [Date Format] [Time Zone] [Use RemoteUI] [Reset PaprSetngs] [Save: Shared Box]
	[Init.Admin.Pswd]		Press [OK] to return the [Administrator Menu] password to factory default.
[Printer Info]	[Paper Info]		Indicates the current paper size, type, and related printer settings.
	[Ink Info]		Indicates ink levels and maintenance cartridge capacity.
	[Head Info]		Indicates information about the printhead.
	[System Info]		Indicates the firmware version, serial number, and interface information.
	[Error Log]		Indicates the most recent error messages (up to five).
	[Other Counter]		Indicates the total printing volume of the printer.

## 1.6.8 Menu

iPF8300S

The printer has a Main menu which includes a menu related to maintenance such as adjustment of ink ejection position of each nozzle and head cleaning, a menu related to printing settings such as auto cutting and ink drying time, and a menu related to parameters such as a message language.

### 1. Menu Operation

#### a) Displaying menu on each tab

Press the ◀ key or ▶ key on the [Tab Selection] screen to select a tab, and press the [OK] key.

A menu associated with each tab is displayed.

Press the ▲ key or ▼ key to select a menu and press the [OK] key.

The menu is selected and menu items are displayed.

Select a menu with [+] on the left side and press the [OK] key to navigate to lower level menus.

#### b) Setting menu items

Press the ▲ key or ▼ key to select an item to set and press the [OK] key.

The item is checked on the left side check box to confirm that it is set.

After 2 seconds, the menu that is one level above is displayed.

#### c) Setting numeric value for a menu item

Proceed as follows to set a numeric value for an item such as network settings.

1. Press the ◀ key or ▶ key to move the underscore to the field you want to enter a numeric value.
2. Press the ▲ key or ▼ key to enter a numeric value.
3. Repeat steps 1 and 2 and press the [OK] key when finished.

**2. Main Menu**

The structure and settings of the main menu is as follows. The asterisk mark "\*" is default setting.

**[Paper Menu]**

\*1: Available only if ManageRemainRoll is On.

\*2: Available only if Width Detection is set to Off.

\*3: Available after Auto(Advanced) in Head Posi. Adj. has been used once.

\*4: Available when you have specified Feed Priority > Adj. Priority > Automatic or Print Quality.

\*5: Available when you have specified Feed Priority > Adj. Priority > Automatic or Print Length.

\*6: Displayed if a sheet is loaded in the printer.

\*7: Not shown if you have set IPv4 Mode to Manual.

\*8: Not shown if you have set NetWare to Off.

\*9: Not displayed if IPv6 Support is Off.

\*10: Not shown if you have set Auto Detect to On.

\*11: Print Anyway is displayed when a job being held is selected.

\*12: Viewing and configuration is possible for administrators, and only viewing for other users.

\*13: Viewing and configuration is possible for administrators only.

\*14: Follows the setting in Date Format.

\*15: Displayed only when the Media Take-up Unit is attached.

\*16: Available if: Use Take-up Reel is Enable, roll paper is loaded, and you have not executed Auto Feed for the loaded roll.

\*17: Available when Use Take-up Reel is Enable.

\*18: Leading edge is not available as a setting option in the Paper Detailed Settings dialog box of the printer driver.

\*19: Default setting for the time to enter the power save mode/sleep mode is recommended.

3. Main menu during printing

The structure of the main menu during printing is as follows.

T-1-56

First Level	Second Level	Third Level	Fourth Level	Fifth Level
[Adj. Fine Feed]				
[Printer Info]	[Paper Info]			
	[Ink Info]			
	[Head Info]			
	[System Info]			
	[Error Log]			
	[Other Counter]			

#### 4. Main Menu Settings

Main menu items are described in the following tables.

##### [Paper Menu]

T-1-57

Setting Item		Description/Instructions
[Load Paper]		Select either roll paper or cut sheet.
[Eject Paper]		Choose this item before removing loaded paper.
[Chg. Paper Type]		Change currently set paper type.
[Chg. Paper Size]		Change currently set paper size.
[ManageRemainRoll]		Choose On to print a barcode at the end of a roll before you remove it. The printed barcode can be used in managing the amount of roll paper left. ChooseOff if you prefer not to print the barcode.
[Paper Details] (The paper type is displayed here.)	[Head Height]	Adjust the Printhead height.
	[Skew Check Lv.]	If you print on the paper that has an irregular width, choose Loose for a higher skew detection threshold, or choose Off to disable skew detection. However, if paper is loaded askew when detection is Off, note that paper jams or Platen soiling may occur.
	[Cutting Mode]	Select whether to use standard round blade cutter or not. Select [Automatic] to cut paper after printing. Select [Manual] to print a line at the cut position after printing without cutting. Select [Eject] to prevent the printout from dropping until the ink dries after printing.
	[Cut Speed]	Choose the cutting speed. If you use adhesive paper, choosing Slow helps prevent adhesive from sticking to the cutter and keeps the cutter sharp.
	[Trim Edge First]	If a roll is loaded, the end of the paper will be cut.
	[CutDustReduct.]	Choose On to reduce the amount of debris generated when cutting film and similar media by printing a line at the cut position. This option reduces the amount of debris given off after cutting. It also helps prevent adhesive from sticking to the cutter and keeps the cutter sharp if you use adhesive paper.
	[VacuumStrngth]	Specify the level of suction that holds paper against the Platen.
	[Scan Wait Time]	Specify the time to wait for the ink to dry between each scan in bidirectional printing, in consideration of how quickly the ink dries. Note that printing will take longer if you specify a wait time.
	[Roll DryingTime]	Specify the time to wait for the ink to dry for each sheet.
	[NearEnd RollMrgn]	Specify the minimum margin at the leading edge of roll paper to ensure better printing quality at the leading edge. Note that if you choose 3mm, it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the leading edge. It may also cause the Platen to become soiled.
	[NearEnd Sht Mrgn]	Specify a margin at the leading edge of sheets to ensure better printing quality at the leading edge. Note that if you choose 3mm, it may lower the printing quality at the leading edge and affect feeding accuracy. The printed surface may be scratched, and ink may adhere to the leading edge.
	[Bordless Margin]	Adjust the margin during borderless printing. Choose Automatic to have the printer automatically detect the paper width and configure the margin settings for borderless printing. If margins are mistakenly created when Automatic is selected, choose Fixed. In this case, the paper width is not detected automatically, and the document is printed without borders, using the margin settings required by the printer.
	[Width Detection]	Make this setting when the print size is different from the media size, for example, when you want to make a print within a frame. When you select [OFF], the paper width is not detected.
[Return Defaults]		Choose OK to restore Paper Details to the factory default values.
[Print Paper Detail]		Print the paper settings set with [Paper Details].
[Keep Paper Type]		Select [On] to continue using the same type of paper.

**[Ink Menu]**

T-1-58

Setting Item	Description/Instructions
[Rep. Ink Tank]	When replacing the Ink Tank, choose Yes and follow the instructions on the screen.
[Head Cleaning A]	Specify Printhead cleaning options. Execute Head Cleaning A if printing is faint, oddly colored, or contains foreign substances.

**[Job Menu]**

T-1-59

Setting Item				Description/Instructions
[Print Job]	[Job List]	(Select Print Job.)	[Delete]	Delete the current job or queued jobs.
			[Preempt Jobs]	Print the job first after the current print job is finished printing.
[Stored Job]	[Mailbox List]	(Enter a password if one has been set.)	[Job List]-[Print]	Prints a saved job.
			[Job List]-[Delete]	Deletes a saved job.
			[Print Job List]	Prints a list of saved jobs.
[Job Log]	(Choose from information about the latest three print jobs.)	[Document Name]		Indicates the document name of the selected print job.
		[User Name]		Indicates the name of the user who sent the print job.
		[Page Count]		Indicates the number of pages in the job.
		[Job Status]		Indicates the printing results.
		[Print Start Time]		Indicates when the print job was started.
		[Print End Time]		Indicates when the print job was finished.
		[Print Time]		Indicates the time required to print the job.
		[Output Img. Size]		Indicates the image size in the print job.
		[Media Type]		Indicates the type of paper in the print job.
		[Paper Consumed]		Indicates the consumption of paper.
		[Paper Length]		Indicates the length of paper.
		[Paper Width]		Indicates the width of paper.
		[Interface]		Indicates the interface used for the print job.
		[Ink Consumed]		Indicates a rough estimate of how much ink was consumed per job.
		[Print Settings]		A counter for maintenance purposes. Indicates the job print settings.
		[Head Height]		A counter for maintenance purposes. Indicates the head height when jobs were printed.
		[Temp./Humidity]		A counter for maintenance purposes. Indicates the temperature and humidity when jobs were printed.
		[Adjustment reg.]		A counter for maintenance purposes. Indicates the adjustment conditions applied to jobs.
[Print Job Log]				Print the print job information such as paper type, size, and ink consumption. Ink consumption is the approximate amount of ink used to print one sheet.
[Pause Print]				Select [On] to stop printing.
[HDD Information]				Indicates the total hard disk capacity and the mail box free space.

## [Set./Adj. Menu]

T-1-60

Setting Item			Description/Instructions
[Test Print]	[Nozzle Check]		Print a nozzle check pattern.
	[Status Print]		Print the printer information.
	[Interface Print]		Print the interface settings.
	[Paper Details]		Prints the paper settings set with [Paper Details].
	[Print Job Log]		Print print job information such as paper type, size, and ink consumption. Ink consumption is the approximate amount of ink used to print one sheet.
	[Menu Map]		Print the menu list.
[Adjust Printer]	[Head Posi. Adj.]	[Auto(Standard)]	The printer prints and reads a test pattern for automatic adjustment of Printhead alignment relative to the printing direction.
		[Auto(Advanced)]	The printer prints and reads a test pattern for automatic adjustment of Printhead alignment relative to the printing direction and spacing between nozzles and colors. Try adjustment in this mode if "Auto(Standard)" does not improve printing.
		[Auto(Expansion)]	The printer prints and reads a test pattern for automatic adjustment of Printhead alignment relative to the printing direction and spacing between nozzles and colors. Adjustment is performed at a higher level of precision than Auto(Advanced). Try adjustment in this mode if vertical lines are warped or colors are out of alignment when the printer driver option "High-Precision Printing" or "Priority on dot placement accuracy" is selected.
		[Manual]	Print a test pattern for adjustment of Printhead alignment relative to the printing direction. Enter the adjustment value manually based on the resulting pattern.
	[Feed Priority]	[Adj. Priority]	Set the priority feed precision. Normally select [Automatic]. Select [Print Quality] to print at high quality. Select [Print Quality] to reduce horizontal streaks. Select [Print Length] to accurately control the feed amount. However, selecting [Print Length] may cause colors to become slightly uneven in the carriage scan direction.
		[Automatic]	
		[Print Quality]	
	[Adj. Quality]	[Print Length]	Set when using paper described in the paper reference guide. A pattern to adjust the paper feed amount is printed, and the feed amount is automatically adjusted from the printed result.
		[Auto(GenuinePpr)]	
		[Auto(OtherPaper)]	
		[Manual]	
	[Adjust Length]	[AdjustmentPrint]-[A:High]/[B:Standard/Draft]	Print a test pattern for adjustment relative to paper stretching or shrinkage, after which you can enter the amount of adjustment.
		[Change Settings]-[A:High]/[B:Standard/Draft]	Displayed when [Print Length] is selected as [Adj. Priority] for [Feed Priority]. Adjust the expansion rate of the currently loaded paper. Enter the result adjusted with [AdjustmentPrint] or the difference with your own measurement in %. Increase the adjustment value to increase the feed amount for paper that tends to expand, and reduce it for paper that tends to shrink.
	[Calibration]	[Auto Adjust]	Choose Yes for automatic adjustment of the adjustment value after a test pattern for color calibration is printed. The new color calibration adjustment value is applied in all print jobs.
		[Calibration Log]	Check the date when color calibration was executed, as well as the type of paper used, as shown on the Display Screen.
		[Use Adj. Value]	Choose Disabled >OK if you prefer not to apply the color calibration adjustment value in print jobs. The printer driver settings will be used instead. Choose Enabled >OK to apply the color calibration adjustment value in print jobs. However, printer driver settings are given priority.
		[Set Exec. Guide]	Choose On if you want to be displayed the message at the recommended timing of the calibration.
		[Return Defaults]	Clear the color calibration adjustment value and the execution log.
[Maintenance]	[Head Cleaning]		Specify Printhead cleaning options. Choose Head Cleaning A if printing is faint, oddly colored, or contains foreign substances. Choose Head Cleaning B if no ink is printed at all, or if printing is not improved by Head Cleaning A.
	[Nozzle Check]		Print a nozzle check pattern.
	[Replace P.head]		Not displayed during a warning message that the remaining Maintenance Cartridge capacity is low. When replacing the Printhead, choose Yes and follow the instructions on the screen.
	[Repl. maint cart]		When exchanging the maintenance cartridge, choose Yes and follow the instructions on the screen.
	[Repl. S. Cleaner]		When replacing the Shaft Cleaner, choose Yes and follow the instructions on the screen.
	[Change Cutter]		When transferring the printer to another location, choose the level of transfer and follow the instructions on the screen.

Setting Item				Description/Instructions	
[Interface Setup]	[EOP Timer]			Specify the timeout period before cancellation of print jobs that cannot be received by the printer.	
	[TCP/IP]	[IPv4]	[IPv4 Mode]		Choose whether the printer IP address is configured automatically or a static IP address is entered manually.
			[Protocol]	[DHCP]/ [BOOTP]/ [RARP]	Specify the protocol used to configure the IP address automatically.
			[IPv4 Settings]	[IP Address]/ [Subnet Mask]/ [Default G/W]	Specify the printer network information when using a static IP address. Enter the IP address assigned to the printer, as well as the network subnet mask and default gateway.
			[DNS Settings]	[DNS Dync update]	Specify whether DNS server registration is updated automatically.
				[Pri. DNS SrvAddr]/[Sec. DNS SrvAddr]	Specify the DNS server address.
				[DNS Host Name]	Specify the DNS host name.
				[DNS Domain Name]	Specify the DNS domain name.
			[IPv6]	[IPv6 Support]	
		[IPv6 StlessAddrs]		Set whether to use IPv6 stateless address.	
		[DHCPv6]		Set whether to use DHCPv6 setting.	
		[DNS Settings]		[DNS Dync update]- [Statefull Addr]/ [Stateless Addr]	Specify whether DNS server registration is updated automatically.
				[Pri. DNS SrvAddr]/[Sec. DNS SrvAddr]	Specify the DNS server address.
				[DNS Host Name]	Specify the DNS host name.
				[DNS Domain Name]	Specify the DNS domain name.
		[NetWare]			Specify the NetWare protocol. To apply your changes, choose Register Setting.
		[Frame Type]			Specify the frame type to use.
	[Print Service]			Choose the print service.	
	[AppleTalk]			Specify whether to use the AppleTalk protocol. To apply your changes, choose Register Setting.	
	[Ethernet Driver]*12	[Auto Detect]			Specify the communication method. To apply your changes, choose Register Setting. Choose On for automatic configuration of the LAN communication protocol. Choose Off to use settings values of Comm.Mode and Ethernet Type.
		[Comm.Mode]			Choose the LAN communication method.
		[Ethernet Type]			Choose the LAN transfer rate.
		[Spanning Tree]			Choose whether spanning-tree packets are supported over the LAN.
		[MAC Address]			Displays the MAC address.
	[Interface Print]				Print the interface settings.
	[Return Defaults]				Select [OK] to return the [Interface Setup] settings to factory default.

T-1-62

Setting Item			Description/Instructions
[System Setup]	[Sleep Timer]		Specify the period before the printer enters Sleep mode.
	[Buzzer]		Set the buzzer. Choose On for the buzzer to sound once for warnings and three times for errors.
	[Contrast Adj.]		Adjust the Display Screen contrast level.
	[Date & Time]	[Date]	Set the current date.
		[Time]	Set the current time. This can be set only when [Date] is set.
	[Date Format]		Specify the date format.
	[Language]		Specify the language used on the Display Screen.
	[Time Zone]		Specify the time zone. Time zone options indicate a main city in this time zone and the difference from Greenwich Mean Time.
	[Length Unit]		Choose the unit of measurement when roll length is displayed. You can switch the unit displayed for the remaining paper amount.
	[Detect Mismatch]		Set the printing behavior when the paper type and size set with the printer menu does not match the paper type and size set with the printer driver. Select [Pause] to pause printing. Select [Warning] to print a warning and continue printing. Select [None] to continue printing without displaying a warning. Select [Hold Job] to queue the job with different paper type and size in a job queue on the hard disk.
	[Paper Size Basis]	[Sht Selection 1]	Select which size is to be recognized, [ISO A3+] or [13"x19"(Super B)], when the detected size of the cut sheet is between these sizes.
		[Sht Selection 2]	Select which size is to be recognized, [ISO B1] or [28"x40"(ANSI F)], when the detected size of the cut sheet is between these sizes.
	[Keep Paper Size]		Select [On] to give priority to paper size. If the margin set with the printer driver is less than the margin set with the printer menu, the margin set with the printer menu has priority and text and images extending beyond the margins are truncated. Select [Off] to give priority to margin settings. If the margins set with the printer driver and the margins set with the printer menu are different, the larger settings are used for printing.
	[Rep.P.head Print]		Select [On] to automatically perform [Adjust Detail] after replacing the Printhead.
[Nozzle Check]		Set with [Frequency] the timing to check for nozzle clogging after printing. Select [Standard] to adjust the checking timing according to the nozzle usage. Select [1 page] to check after each page. Select [On] for [Warning] to display a warning when the print head nozzle is clogged while printing.	
[Use RemoteUI]		Select [Off] to disable access from RemoteUI and enable setting only from the operation panel.	
[Reset PaprSetngs]		Restores settings that you have changed with Media Configuration Tool to the factory default values.	

Setting Item			Description/Instructions
[System Setup]	[Erase HDD Data]	[High Speed]	Delete the file management information of the saved data in the HDD.
		[Secure High Spd.]	Overwrite the random data in the whole of the hard disk drive.
		[Secure]	Overwrite 00 and FF and random data in the whole of the hard disk drive once at a time. Execute the verify check whether the data has written correctly to the hard disk drive.
	[Output Method]	[Print]	Select the output method of jobs sent from software other than the printer driver. This can be set from the printer if you are using a printer driver.
		[Print (Auto Del)]	Select [Print] to print normally. Select [Print (AutoDel)] to print and delete the data in hard disk. Select [Save: Box XX] to save to box without printing.
		[Save: Box XX]	
	[Print After Recv]		Setting of jobs sent from software other than the printer driver. This can be set from the printer if you are using a printer driver. Select [On] to print after saving.
	[Common Box Set.]		Select [Print(AutoDel)] to print without saving to a common box.
	[Show Job Log]		Selecting Off prevents display of the log in Job Menu > Job Log. Additionally, the log is not printed if you choose Job Menu > Print Job Log. Note that because job logs are not collected, the Status Monitor accounting functions will not work correctly.
[Take-up Reel]	[Use Take-up Reel]		Choose Enable to use the Media Take-up Unit.
	[Auto Feed]		This command is available only if Take-up Reel is set to Enable. Choose Yes to advance roll paper automatically on the Rewind Spool, up to the fastening position.
	[Skip Take-Up Err]		Choose On to continue with printing even if an error occurs with the Media Take-up Unit. Choose Off to have the printer pause before printing if a rewinding error occurs.
[Prep.MovePrinter]	[Level 1]		Select when moving the printer. Follow the instruction on the screen and perform the necessary process.
	[Level 2]		This is not displayed when displaying a warning message about the amount remaining maintenance cartridge.
	[Level 3]		
[Admin. Menu]	[Change Password]		Set a password to restrict displaying/setting of menus as follows. Allowed value is from 0 to 9999999. - Allow only administrator to display/set [IPv4] [Change Password] [Init.Admin.Pswd] - Allow administrator to display/set and non-administrator to display only [Interface Setup](exclude [IPv4]) [Date & Time] [Date Format] [Time Zone] [Use RemoteUI] [Reset PaprSetngs] [Save: Shared Box]
	[Init.Admin.Pswd]		Press [OK] to return the [Administrator Menu] password to factory default.
	[Printer Info]	[Paper Info]	
[Ink Info]		Indicates ink levels and maintenance cartridge capacity.	
[Head Info]		Indicates information about the printhead.	
[System Info]		Indicates the firmware version, serial number, and interface information.	
[Error Log]		Indicates the most recent error messages (up to five).	
[Other Counter]		Indicates the total printing volume of the printer.	

### 1.6.9 Basket Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The Basket Unit(output stacker) can be installed at four positions, as shown.

F-1-46

F-1-47

[1] When storing printed documents on the Output Stacker, set it to this position.

[2] When the Output Stacker is not used, set it to this position.

[3] When printing on large and stiff sheets, or when the Media Take-up Unit is used, or when the Output Stacker is stored for long periods, lower it to this position for storage.

When using the Output Stacker again after storage, reattach the Basket Rod on the front of the Output Stacker to the tips of the left and right Basket Rods and pull the side rods out completely.

[4] When printing banners or when printing on delicate paper, set it to this position.

- When storing printed documents on the Output Stacker, always use it in position [1]. If you do not, printed documents may not be dropped into the Output Stacker, and the printed surface may become soiled.

- The Output Stacker can hold one sheet. When printing multiple pages, remove each sheet after it is printed.

- Before using the Output Stacker, remove the Rewind Spool. If you do not, it may prevent printed documents from being held correctly, and it they may be scratched.

#### a. Using the Output Stacker in the position for ejection in the front of the printer

You can also set the Output Stacker to the following position when printing banners or when printing on delicate paper.

#### MEMO:

- Always choose [Cutting Mode] > [Eject] in the main menu when the Output Stacker is in the position for ejection in the front of the printer. If you choose [Automatic], printed documents may be damaged.

- During ejection in the front of the printer, be especially careful when using delicate paper or paper that curls easily.

- With some types of paper, the leading edge may curl or bend during ejection. In this case, straighten out the paper. Printed documents may be damaged if the paper is curled or bent.

- Some types of paper may get caught between the Ejection Guide and Output Stacker during ejection. In this case, free the paper from where it is caught. Printed documents may be damaged if the paper gets caught.

- 1) Lift the Basket Rod gently to release the lock, lower the stacker toward the front, and push it all the way back.

F-1-48

- 2) Remove the front Basket Rod from the left and right Basket Rods, and remove the back Basket Rod and the black cord from the Rod Holder.

F-1-49

3) Store the left and right Basket Rods. Next, remove the Rod Holder Adapter, leaving the Rod Holder attached, and put it in front of the printer.

F-1-50

4) Pull out the Basket Hooks from the left and right side of the Ejection Guide.

F-1-51

5) Attach the Basket Rod to the Basket Hooks so that the white tag of the Basket Cloth is on the left side.

F-1-52

6) Form the Basket Cloth into a sloping shape to make it taut, and attach the middle Basket Rod to the Rod Holder.

F-1-53

**b. Stowing the Output Stacker**

Stow the Output Stacker if you will use the Media Take-up Unit or if you will not use the Output Stacker for an extended period.

1) Lift the front Basket Rod gently to release the lock, lower the stacker toward the front, and push it all the way back.

F-1-54

2) Remove the front Basket Rod from the left and right Basket Rods. Roll up the Basket Cloth and put it at the back of the Bottom Stand Stay.

F-1-55

F-1-56

Arrange the Basket Cloth and Basket Rod so they do not interfere with the Media Take-up Sensor.

F-1-57

3) Push in the left and right Basket Rods toward the back all the way, until they stop.

F-1-58

## 1.7 Safety and Precautions

### 1.7.1 Safety Precautions

#### 1.7.1.1 Moving Parts

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Be careful not to get your hair, clothes, or accessories caught in the moving parts of the printer.

These include the carriage unit activated by the carriage motor, the carriage belt, the ink tube and the flexible cable; the feed motor-driven the feed roller, the pinch roller; and the purge motor-driven the purge unit.

To prevent accidents, the upper cover of the printer is locked during printing so that it does not open. If the upper cover is opened in the online/offline mode, the carriage motor, feed motor, and other driving power supplies are turned off.

F-1-59

T-1-64

- |     |                |      |                    |
|-----|----------------|------|--------------------|
| [1] | Carriage belt  | [7]  | Purge unit         |
| [2] | Ink tube       | [8]  | Pinch roller       |
| [3] | Flexible cable | [9]  | Feed roller        |
| [4] | Carriage unit  | [10] | Feed unit          |
| [5] | Carriage motor | [11] | Feed motor         |
| [6] | Lift unit      | [12] | Media take-up unit |

1.7.1.2 Adhesion of Ink

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

1. Ink passages

Be careful not to touch the ink passages of the printer or to allow ink to stain the workbench, hands, clothes or the printer under repair.  
The ink flows through the ink tank unit, carriage unit, purge unit, maintenance-jet tray, borderless print ink groove, maintenance cartridge and the ink tubes that relay ink to each unit.

- F-1-60  
T-1-65
- |     |                       |     |                             |
|-----|-----------------------|-----|-----------------------------|
| [1] | Maintenance-jet tray  | [4] | Carriage unit               |
| [2] | Maintenance cartridge | [5] | Ink tank unit               |
| [3] | Purge unit            | [6] | Borderless print ink groove |

Although the ink is not harmful to the human body, it contains organic solvents.  
Avoid getting the ink in your mouth or eyes.  
Flush well with water and see a doctor if contact occurs.  
In case of accidental ingestion of a large quantity, call a doctor immediately.

Since this ink contains pigment, stains will not come out of clothing.

## 2. Ink mist

Since the printhead prints by squirting ink onto the media, a minute amount of ink mist is generated in the printing unit during printing. The ink mist is collected in the printer by the airflow. However, uncollected ink mist may stain the platen unit, carriage unit, main rail unit, external unit, or purge unit. These stains may soil the print media or hands and clothes when servicing the printer, wipe them off carefully with a soft, well-wrung damp cloth.

F-1-61  
T-1-66

- [1] Purge unit
- [2] Upper cover
- [3] Platen unit/Carriage unit/Main rail unit

### 1.7.1.3 Electric Parts

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The electrical unit of the printer is activated when connected to the AC power supply.

At the rear of the printer are the main controller, power supply, interface connector, and optional media take-up unit connector. The head relay PCB and carriage relay PCB are incorporated in the carriage unit, and the operation panel is located on the upper right cover.

When servicing the printer with the cover removed, be extremely careful to avoid electric shock and shorting contacts.

F-1-62

T-1-67

- |     |                    |     |                              |
|-----|--------------------|-----|------------------------------|
| [1] | Operation panel    | [5] | Power Supply                 |
| [2] | Carriage relay PCB | [6] | Main controller PCB          |
| [3] | Head relay PCB     | [7] | Interface connector          |
| [4] | AC inlet           | [8] | Media take-up unit connector |

## 1.7.2 Other Precautions

### 1.7.2.1 Printhead

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### 1. How to Handle the Printhead

Do not open the printhead package until you are ready to install the head.

When installing the printhead in the printer, hold the knob[1] and then remove the protective cap 1[2] and protective cap 2[3] in that order.

Do not reattach the protective cap 2[3] to the printhead because the cap may damage the nozzles[4].

To prevent the nozzles from getting clogged with foreign matter or dried ink, install the printhead immediately after you remove the protective caps.

Also make sure to press down the locking lever of the printhead until you feel a click.

In addition, to prevent clogging of the nozzles with foreign matter and improper supply of ink, never touch the nozzles[4] or ink port[6], or wipe it with tissue paper or anything else.

Do not touch Electrical contact[5].

Also, never attempt to disassemble/reassemble the printhead or wash it with water.

#### MEMO:

If the nozzles are clogged or an ink suction problem occurs, white lines can appear on the printout at a constant frequency or color dulling can occur. If this problem is not resolved by cleaning operations, replace the printhead with a new one.

F-1-63

T-1-68

[1]	Knob	[4]	Nozzles
[2]	Protective cap 1	[5]	Electrical contact
[3]	Protective cap 2	[6]	Ink port

#### 2. Capping

The printer will perform the capping operation when printing has ended or during standby due to an error, in order to protect the printhead and avoid ink leakage. If the power cord is accidentally unplugged, turn off the Power button, reconnect the power cord, and then turn on the Power button. Confirm that the printer starts up properly and enters to the "Online" or "Offline" status, and then power off the printer using the Power button.

Improper "capping operation" may cause clogged nozzles due to dried ink or ink leakage from the printhead.

#### 3. When the printer is not used for a long time

Keep the printhead installed in the printer even when it is not used for an extended period of time.

If the printhead is left uninstalled, a printing failure may arise from closed nozzles due to depositing of foreign matter or dried ink when it is reinstalled. Even if the head remains installed, the nozzle may dry out and cause a printing failure if the ink is drained for transport.

#### 4. Conductivity of Ink

The ink used in this printer is electrically conductive. If ink leaks into the mechanical unit, wipe clean with a soft, well-wrung damp cloth. If ink leaks onto electrical units, wipe them completely using tissue paper. If you cannot remove ink completely, replace the electrical units with new ones.

If electrical units are powered with ink leaked onto them, the units may damage. Never connect the power cord when ink has leaked onto the electrical units.

### 1.7.2.2 Ink Tank

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### 1. Unpacking the Ink Tank

Do not unpack the ink tank until you are ready to install it.

When installing the ink tank, be sure to shake it slowly 7 to 8 times before unpacking it. Otherwise, the ink ingredients may precipitate and degrade the print quality.

To prevent foreign matter from entering the ink port, install the unpacked ink tank in the printer immediately.

#### 2. Handling the Ink Tank

To prevent foreign matter from entering the ink flow path and causing ink suction and printing problems, never touch the ink port and contacts of the ink tank.

When you press down the ink tank cover, the needle enters the ink port, allowing ink to flow between the printer and ink tank.

Do not raise or lower the ink tank cover except when replacing the ink tank.

F-1-64

### 1.7.2.3 Handling the Printer

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### 1. Precautions against Static Electricity

Certain clothing may generate static electricity, causing an electrical charge to build up on your body. Such a charge can damage electrical devices or change their electrical characteristics.

In particular, never touch the printhead contacts[1].

#### 2. Fixing the Carriage

After completion of printing, the carriage is mechanically locked by the lock arm in the purge unit at the same moment the printhead is capped.

Before transporting the printer, secure the carriage at its home position using belt stoppers[1] so that the carriage does not become separated from the lock arm and damage or ink does not leak.

### 3. Contact of Linear Scale/Carriage Shaft

Do not touch the linear scale and carriage shaft when the upper cover is opened, for maintenance.

Touching the linear scale and carriage shaft might cause abnormal movement of the carriage and produce defective prints.

F-1-67

- [1] Linear Scale
- [2] Carriage Shaft

### 4. Replacing the maintenance cartridge

When the maintenance cartridge detects that the tank is full, the "Repl. Maint. C" error appears. In this case the maintenance cartridge must be replaced.

The printer will not operate until the error is cancelled.

Be careful that the waste ink does not splash when you remove the used maintenance cartridge from the printer.

---

#### MEMO:

This printer has an EEPROM in the maintenance cartridge and the maintenance cartridge status is controlled by the main controller PCB which reads and writes the contents of that EEPROM. Therefore, initializing the counter information will not be needed when the maintenance cartridge is replaced.

---

### 5. Refilling the ink

After draining the ink from the printer according to the automatic or manual ink draining procedure for disassemble, reassemble, or transport/ship the printer, refill the ink as soon as possible upon completion of those tasks.

Dried remaining ink on the surface of some components, may cause damage or abnormal operations.

### 1.7.3 Precautions When Servicing Printer

#### 1.7.3.1 Notes on the Data Stored in the Printer

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

This printer counts the print length, number of ink tank replacements, carriage driving time, number of cleaning operations, number of cutter operations, and so on and stores them in the main controller's EEPROM as a COUNTER in Service mode.

COUNTER provides important information about the printer usage status.

You can check this information by printing it in the service mode or displaying it on the display.

Follow the precautions below when servicing the printer.

(1) Repairing/replacing the PCB

When replacing the main controller, follow the specified replacement procedure.

For the main controller replacement procedure, see "Disassembly/Reassembly" > "Points to Note on Disassembly and Reassembly" > "Boards".

(2) After replacing the carriage unit

The information about the carriage driving time resides in the carriage unit. After replacing the carriage unit, select [INITIALIZE] > [CARRIAGE] in the service mode to initialize the information about the carriage driving time.

(3) After replacing the purge unit

The information about the number of cleanings resides in the purge unit. After replacing the purge unit, select [INITIALIZE] > [PURGE] in the service mode to initialize (clear) the information about the number of cleanings.

(4) On replacement of supplies

After supplies have been replaced, execute [INITIALIZE] > [PARTS COUNTER] > [PARTS xx] in service mode to initialize (clear) the parts counter information.

For the consumable parts, see "Maintenance" > "Consumable Parts".

You cannot check the counter information once it is initialized (cleared). Be careful not to initialize the counter information before checking it.  
You cannot modify the counter information from the operation panel.

#### 1.7.3.2 Confirming the Firmware Version

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Firmware has been downloaded to the main controller.

When you have replaced the main controller, check that the firmware is the latest version. If not, update it to the latest version.

**Reference:**

For instruction on how to update the main controller, refer to "TROUBLESHOOTING" > "Update".

#### 1.7.3.3 Precautions against Static Electricity

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Certain clothing may generate static electricity, causing an electrical charge to build up on your body. Such a charge can damage electrical devices. To prevent this, discharge any static buildup by touching a grounded metal fitting before you start disassembling the printer.

#### 1.7.3.4 Precautions for Disassembly/Reassembly

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The precautions for disassembly/reassembly are described in "Disassembly/Reassembly".

#### 1.7.3.5 Self-diagnostic Feature

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The printer has a self-diagnostic feature to analyze hardware problems.

The self-diagnosis result is shown on the display and indicated by lamps.

For detailed information, see "Error Codes".

#### 1.7.3.6 Disposing of the Lithium Battery

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The main controller PCB of this printer is equipped with a lithium battery to back up various data.

Risk of explosion if battery is replaced by an incorrect type.  
Dispose of used batteries according to the instructions.

"For CA, USA Only

Included battery contains Perchlorate Material-special handling may apply. See

<http://www.dtsc.ca.gov/hazardouswaste/perchlorate/> for detail."

**Achtung:**

Die Lithiumbatterie darf nur durch das Originalersatzteil (Parts Katalog) ersetzt werden;  
ansonsten besteht Brand-/Explosionsgefahr.

Lithiumbatterien niemals aufladen, demontieren oder durch Verbrennen entsorgen;  
bei der Entsorgung die örtlichen Entsorgungsvorschriften beachten (Schadstoffe; Sondermüll).

## 2.1 Basic Operation Outline

### 2.1.1 Printer Diagram

iPF8000

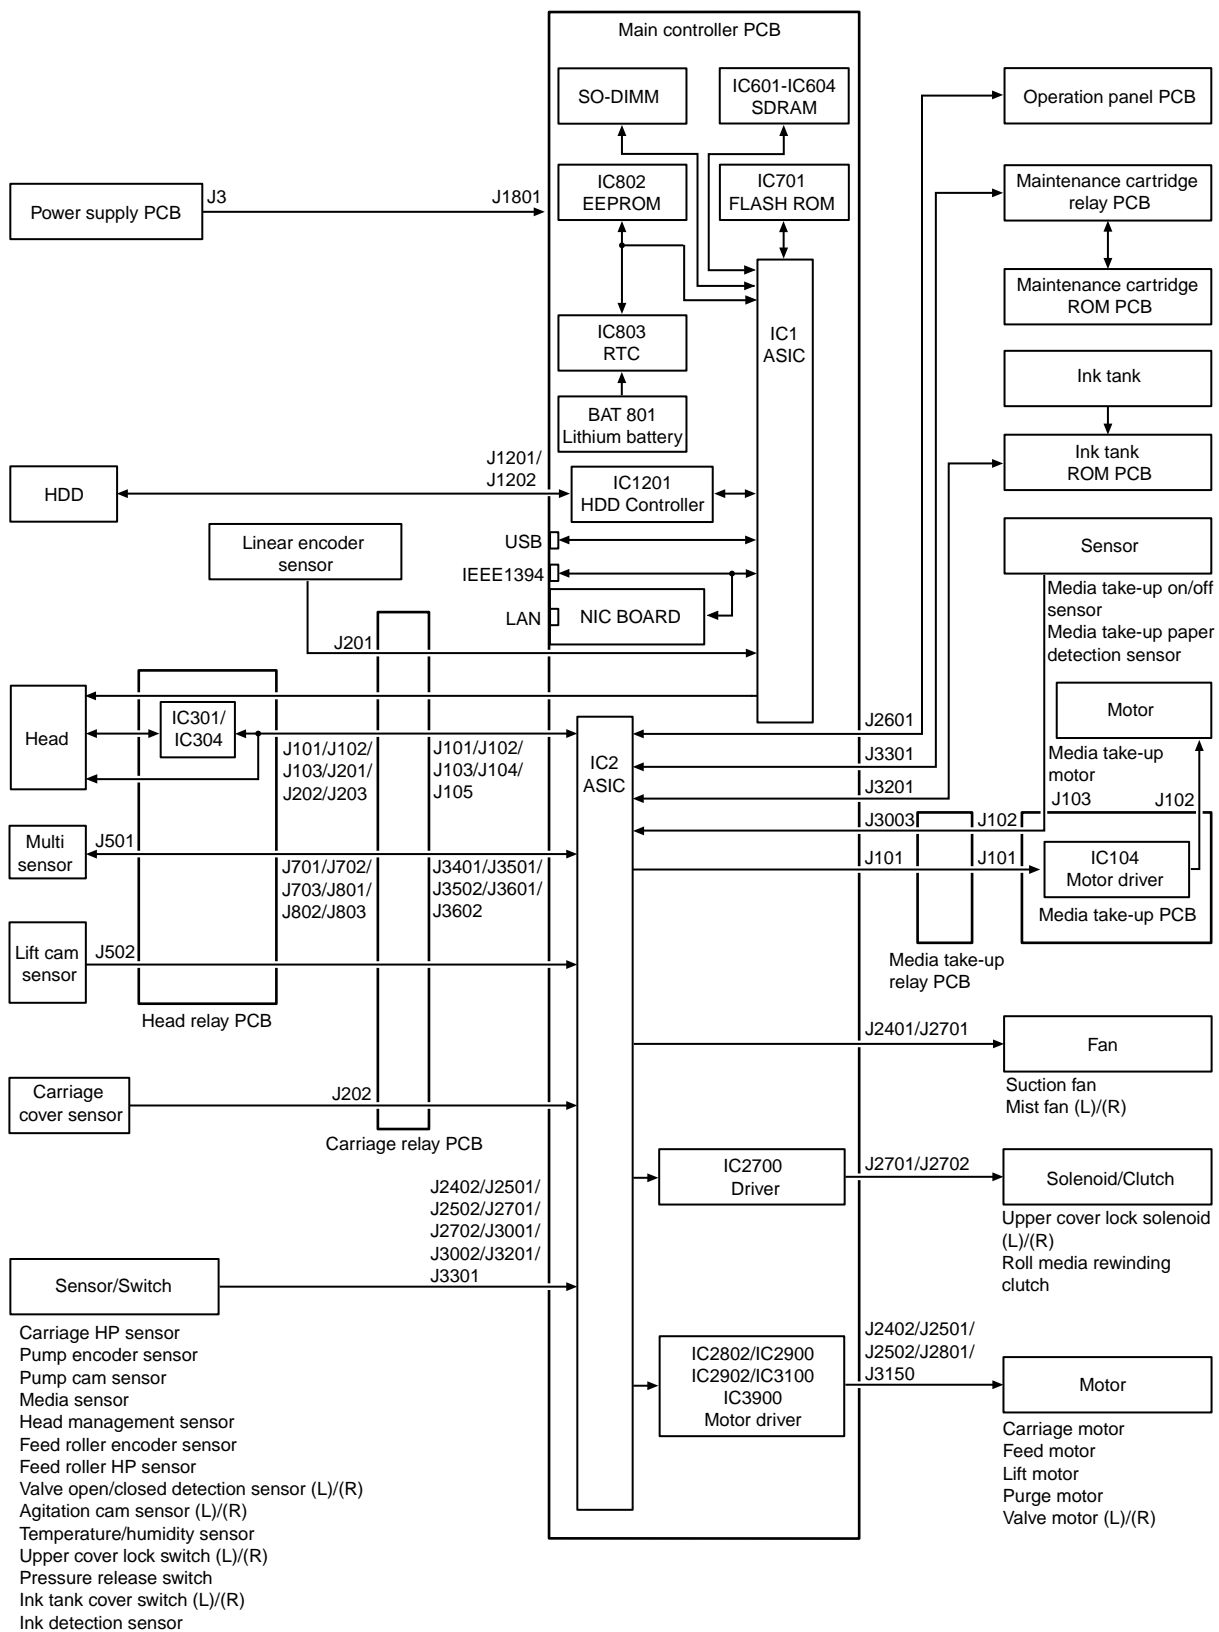

A printer diagram is shown below.

### 2.1.2 Printer Diagram

iPF8000S / iPF8100

A printer diagram is shown below.

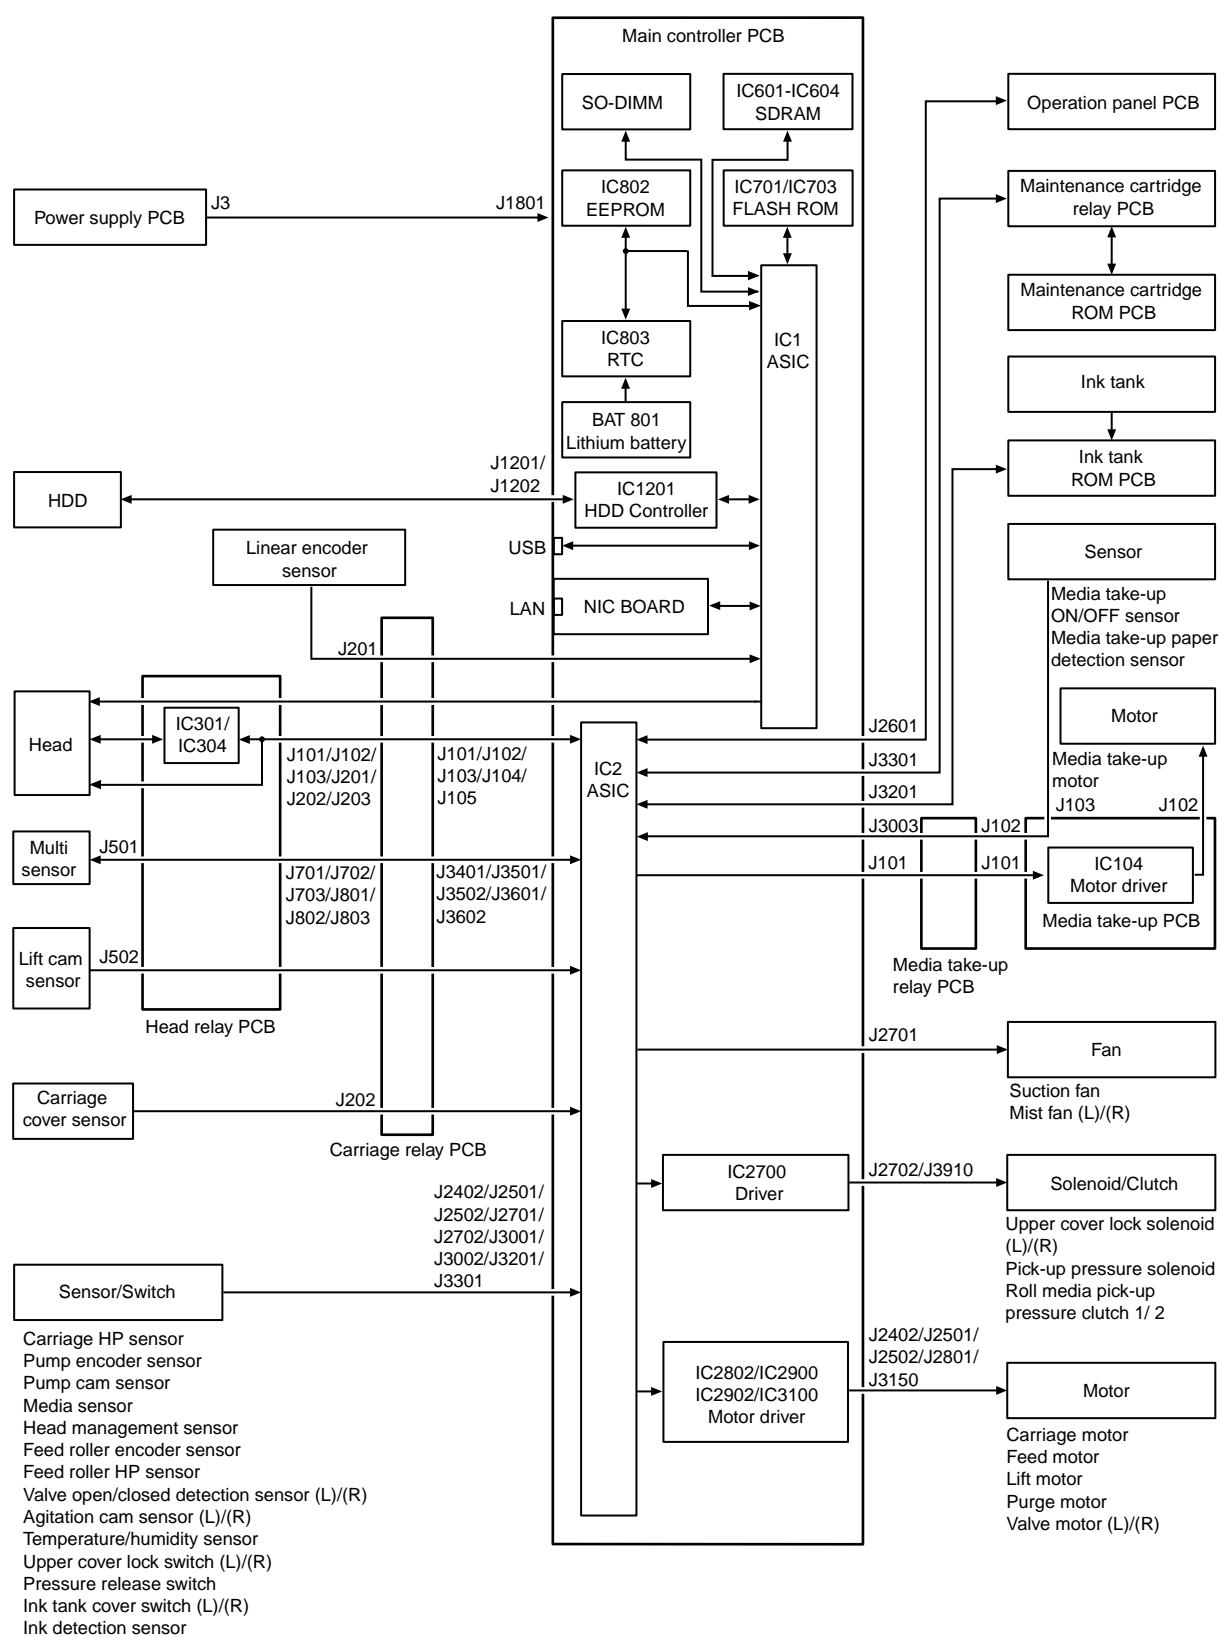

F-2-2

### 2.1.3 Printer Diagram

iPF8300 / iPF8300S

Shown below is a printer diagram.

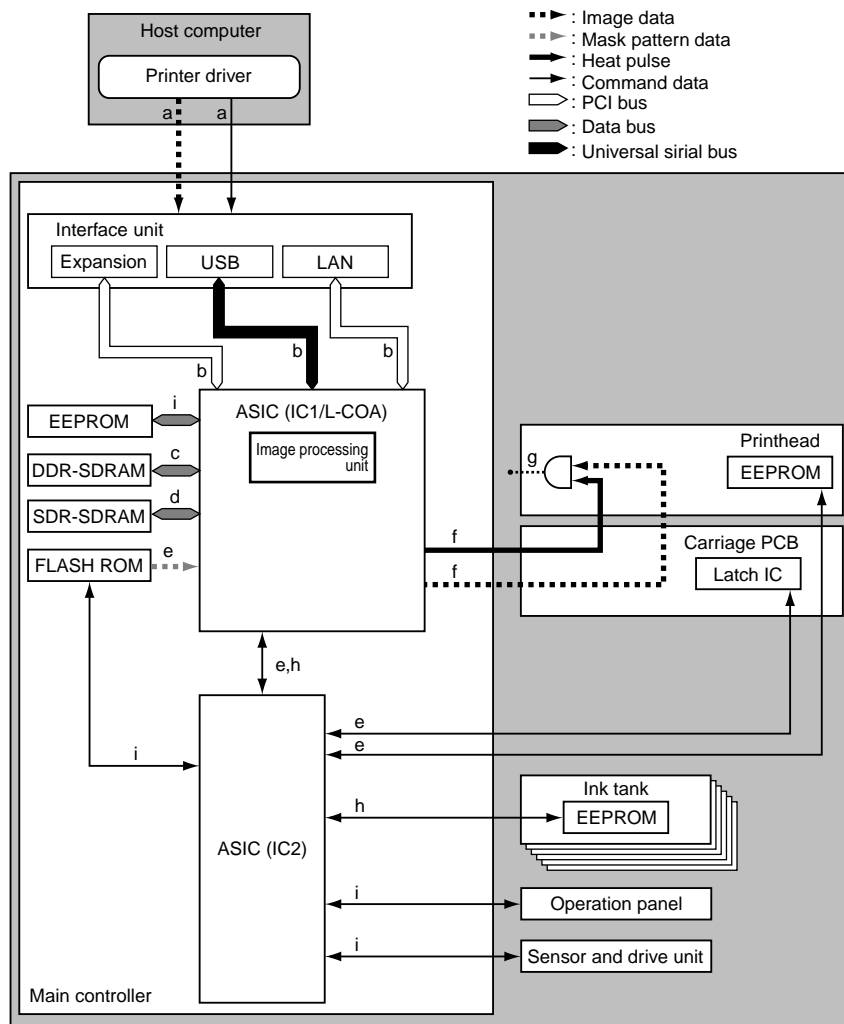

F-2-3

## 2.1.4 Print Signal Sequence

iPF8000 / iPF8100

The signal sequence from when the printer receives the print signals until printing starts is shown in Figure.

F-2-4

a) The printer driver on the host computer transmits print data, including command data, to the printer after compressing the image data, without resolution, color and 12-color binarization conversion.

To achieve high-quality image output, the image processing table data used for image data color conversion and binarization conversion are generated as command data to meet the Media Type and other specifications of the printer driver.

b) This printer receives print data from the individual interfaces on the main controller, transmitting the received print data to ASIC (IC1).

c) The main controller decompresses the print data transmitted to the ASIC and gets it through resolution, color and 12-color binarization conversion while loading the data into DDR-SDRAM from time to time.

It also converts the print data to 12-color binary equivalents of image and command data.

d) The ASIC (IC1) generates image data synthesized with mask data within the ASIC in sync with the discharge time while loading the data into SDR-SDRAM from time to time.

e) The ASIC (IC2) collects printhead information from EEPROM mounted on the printheads and the printer temperature from the latch IC on the carriage board and transmit them to the ASIC (IC1).

The ASIC (IC1) also receives mask pattern data from the firmware installed in flash ROM.

f) The ASIC (IC1) converts the image data synthesized with the mask pattern to data associated with the printhead information and the printer temperature, transmitting the data to the printheads as a print signal. It transmits heat pulses to the printheads at the same time to optimize head driving.

g) The printheads convert the received print signal from a serial signal to a parallel signal for each row of nozzles and ANDs it with the heat pulses for perform printing.

h) The ASIC (IC1) controls the general aspects of image processing and print drive control by detecting the status of the individual printer components with reference to the adjustment values stored in EEPROM. SDR-SDRAM is used as work memory.

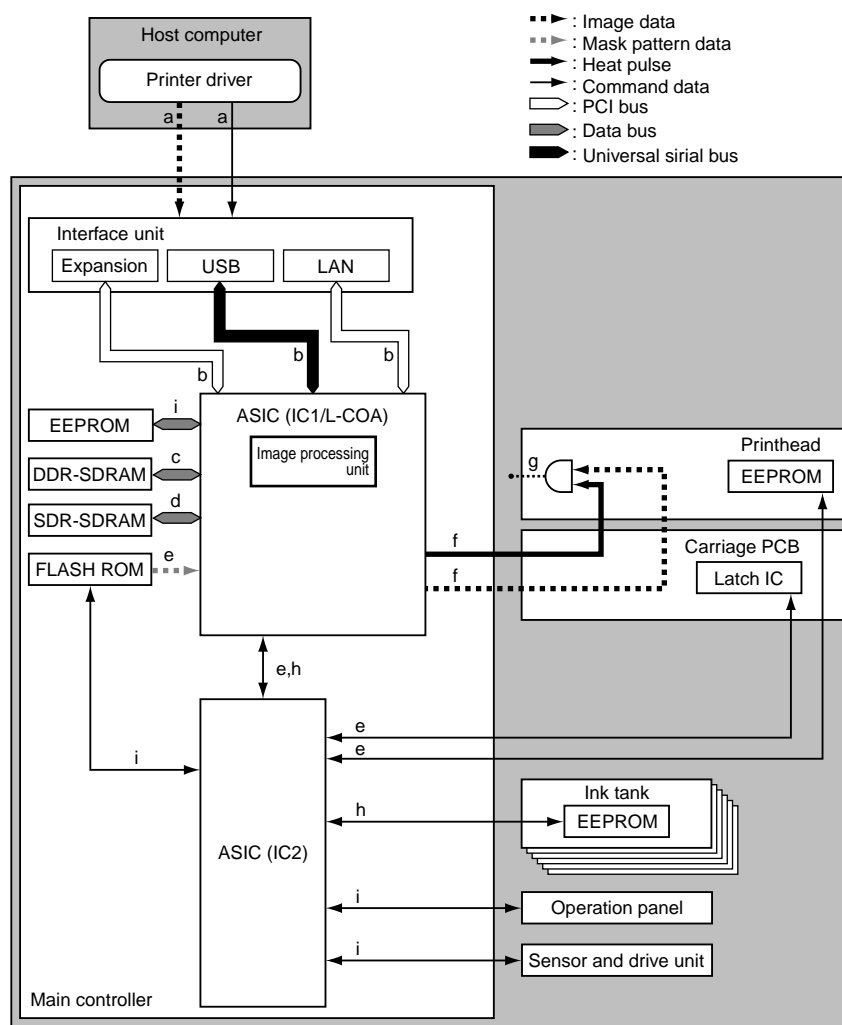

i) The ASIC (IC2) controls the general aspects of drive control by controlling button actuations and message displays on the basis of the firmware installed in flash ROM.

## 2.1.5 Print Signal Sequence

iPF8000S

The signal sequence from when the printer receives the print signals until printing starts is shown in Figure.

F-2-5

a) The printer driver on the host computer transmits print data, including command data, to the printer after compressing the image data, without resolution, color and 8-color binarization conversion.

To achieve high-quality image output, the image processing table data used for image data color conversion and binarization conversion are generated as command data to meet the Media Type and other specifications of the printer driver.

b) This printer receives print data from the individual interfaces on the main controller, transmitting the received print data to ASIC (IC1).

c) The main controller decompresses the print data transmitted to the ASIC and gets it through resolution, color and 8-color binarization conversion while loading the data into DDR-SDRAM from time to time.

It also converts the print data to 8-color binary equivalents of image and command data.

d) The ASIC (IC1) generates image data synthesized with mask data within the ASIC in sync with the discharge time while loading the data into DDR-SDRAM from time to time.

e) The ASIC (IC2) collects printhead information from EEPROM mounted on the printheads and the printer temperature from the latch IC on the carriage board and transmit them to the ASIC (IC1).

The ASIC (IC1) also receives mask pattern data from the firmware installed in flash ROM.

f) The ASIC (IC1) converts the image data synthesized with the mask pattern to data associated with the printhead information and the printer temperature, transmitting the data to the printheads as a print signal. It transmits heat pulses to the printheads at the same time to optimize head driving.

g) The printheads convert the received print signal from a serial signal to a parallel signal for each row of nozzles and ANDs it with the heat pulses for perform printing.

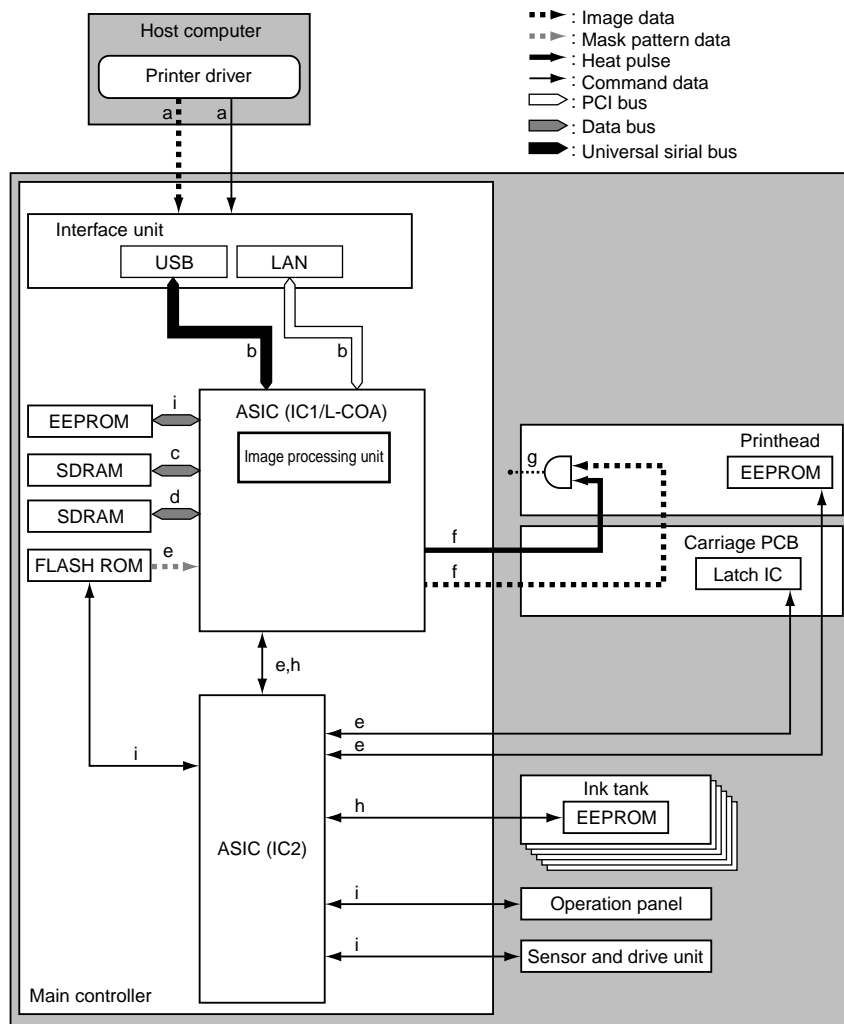

h) The ASIC (IC1) controls the general aspects of image processing and print drive control by detecting the status of the individual printer components with reference to the adjustment values stored in EEPROM. SDR-SDRAM is used as work memory.

i) The ASIC (IC2) controls the general aspects of drive control by controlling button actuations and message displays on the basis of the firmware installed in flash ROM.

## 2.1.6 Print Signal Sequence

iPF8300

The signal sequence from when the printer receives the print signals until printing starts is shown in Figure.

F-2-6

a) The printer driver on the host computer transmits print data, including command data, to the printer after compressing the image data, without resolution, color and 12-color binarization conversion.

To achieve high-quality image output, the image processing table data used for image data color conversion and binarization conversion are generated as command data to meet the Media Type and other specifications of the printer driver.

b) This printer receives print data from the individual interfaces on the main controller, transmitting the received print data to ASIC (IC1).

c) The main controller decompresses the print data transmitted to the ASIC and gets it through resolution, color and 12-color binarization conversion while loading the data into SDRAM from time to time.

It also converts the print data to 12-color binary equivalents of image and command data.

d) The ASIC (IC1) generates image data synthesized with mask data within the ASIC in sync with the discharge time while loading the data into SDRAM from time to time.

e) The ASIC (IC2) collects printhead information from EEPROM mounted on the printheads and the printer temperature from the latch IC on the carriage board and transmit them to the ASIC (IC1).

The ASIC (IC1) also receives mask pattern data from the firmware installed in flash ROM.

f) The ASIC (IC1) converts the image data synthesized with the mask pattern to data associated with the printhead information and the printer temperature, transmitting the data to the printheads as a print signal. It transmits heat pulses to the printheads at the same time to optimize head driving.

g) The printheads convert the received print signal from a serial signal to a parallel signal for each row of nozzles and ANDs it with the heat pulses for perform printing.

h) The ASIC (IC1) controls the general aspects of image processing and print drive control by detecting the status of the individual printer components with reference to the adjustment values stored in EEPROM. SDRAM is used as work memory.

i) The ASIC (IC2) controls the general aspects of drive control by controlling button actuations and message displays on the basis of the firmware installed in flash ROM.

## iPF8300S

To achieve high-quality image output, the image processing table data used for image data color conversion and binarization conversion are generated as command data to meet the Media Type and other specifications of the printer driver.

c) The main controller decompresses the print data transmitted to the ASIC and gets it through resolution, color and 8-color binarization conversion while loading the data into SDRAM from time to time.

2.1.8 Print Driving

iPF8000

Print and control signals are transferred via the carriage board to the printheads to discharge inks from the nozzle assembly at printing. Each printhead has 12 trains of nozzles arranged in a zigzag pattern. This printer uses two printheads arranged side by side. (In installed state, from left to right, Y, PC, C, PGY, GY, MBK, PM, M, BK, R, G, B)  
Print signals directed at each nozzle train are even-numbered nozzle data (Hx-x-DATA-x-EV) and odd-numbered nozzle data (Hx-x-DATA-x-OD). These are transferred in timing with a data transfer clock (Hx-CLK) and data latch pulses (Hx-LT).  
The Heat Enable (Hx-x-HE-x) drive control signal enables inks to be discharged from the nozzles.

1. Pint drive control

Each train of nozzles in a printhead has 2,560 nozzles. Ink discharge nozzles are selected split in 40-, 20- or 10-nozzle blocks according to the Block Enable information in the even-numbered nozzle data and odd-numbered nozzle data.  
Each selected block of nozzles is impressed with a Heat Enable signal generated with variable pulse widths according to the head rank, head temperature and printer temperature for optimized ink discharges. The nozzles are driven by heater boards in the nozzles to discharge inks. Optimal nozzle blocks are selected according to the print path.  
The diagram below illustrates the relationship between a 40-block nozzle and nozzles driven.

F-2-8

## 2. Print drive timing

Each printhead houses 12 trains of nozzles, which share the same data transfer clock (Hx-CLK) and data latch pulses (Hx-LT). Even-numbered nozzle data (Hx-x-DATA-x-EV), odd-numbered nozzle data (Hx-x-DATA-x-OD) and the Heat Enable (Hx-x-HE-x) signal are generated for each nozzle train and controlled individually.

Printing is carried out in two ways through reciprocating motion of the carriage.

An encoder sensor mounted on the carriage generates a 150-dpi-pitched linear scale detection signal (ENCODER\_A) and a signal (ENCODER\_B) shifted 120 degrees in phase. The direction of carriage motion is detected from the status of the ENCODER\_B signal relative to the leading edge of the ENCODER\_A signal. The printhead is driven using a 2400-dpi timing signal (internal signal), which is generated by dividing the ENCODER\_A signal detected at the 150 dpi timing into 16 equal sections.

Printing in the forward direction is triggered at the leading edge of the detection signal (ENCODER\_A).

Printing in the backward direction is carried out the same way as printing in the forward direction but at the trailing edge of the detection signal (ENCODER\_A), when the order of heated nozzles is reversed depending on the sequence of transfer of even-numbered nozzle data and odd-numbered nozzle data.

F-2-9

2.1.9 Print Driving

iPF8000S

Print and control signals are transferred via the carriage board to the printheads to discharge inks from the nozzle assembly at printing. Each printhead has 12 trains of nozzles arranged in a zigzag pattern. This printer uses two printheads arranged side by side. (In installed state, from left to right, PC, C, PM, GY, MBK, GY, Y, BK, M, PM, C, PC)  
Print signals directed at each nozzle train are even-numbered nozzle data (Hx-x-DATA-x-EV) and odd-numbered nozzle data (Hx-x-DATA-x-OD). These are transferred in timing with a data transfer clock (Hx-CLK) and data latch pulses (Hx-LT).  
The Heat Enable (Hx-x-HE-x) drive control signal enables inks to be discharged from the nozzles.

Printing in the forward direction is triggered at the leading edge of the detection signal (ENCODER\_A).

Printing in the backward direction is carried out the same way as printing in the forward direction but at the trailing edge of the detection signal (ENCODER\_A), when the order of heated nozzles is reversed depending on the sequence of transfer of even-numbered nozzle data and odd-numbered nozzle data.

F-2-17

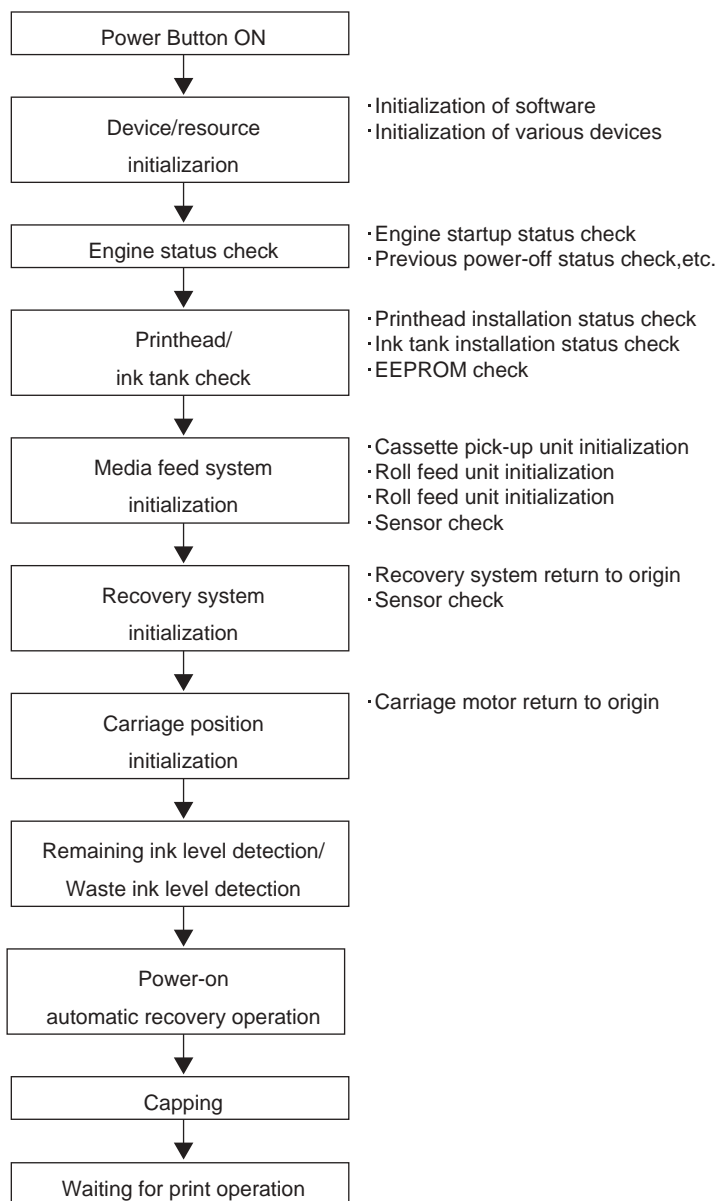

## 2.2 Firmware

### 2.2.1 Operation Sequence at Power-on

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The sequence of printer operations, from power-on to transition to online mode, is flowcharted below. The printer takes less than 1 minute to initialize itself(\*).

\* Excluding the times spent supplying inks and cleaning the printhead after leaving the printer for extended periods of time.

F-2-18

### 2.2.2 Operation Sequence at Power-off

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Turning off the power switch cuts off the drive voltage supply, launching a firmware power-off sequence as shown below.

If the power cord is disconnected from the wall outlet or the upper cover or any other cover is opened, the printer cancels the ongoing operation and shuts down immediately. Since printhead capping may or may not have been carried out properly, reconnect the power cord to the wall outlet and turn on the power switch. Making sure that the printer has entered online mode, turn off the power switch.

#### 1. Power-off sequence

F-2-19

### 2.2.3 Print Control

iPF8000

#### 1. Print modes

Print methods, such as carriage and paper feed operation, are varied according to the media type, print quality, kind of print data and so forth to achieve high-quality high-speed print free from blurring and uneven density.

Because each color prints in up to 16 passes according to the print quality requirement for a print mode, uneven density problems caused by variations in the rate of discharge among different nozzles are eliminated. Deferred print timings do not allow a new ink to overprint the preceding ink until the preceding ink has virtually fixed, thereby reducing the chances of blurred printing.

Different operations take place even in the same print mode according to the paper setting of the print driver.

#### a) Draft mode

Imaging data is thinned out to print in one or two passes per band (equivalent of the length of a nozzle).

Configure the print driver for print quality Draft to enable draft mode

#### b) Standard mode

Imaging data prints in one to six (one, two, four or six) passes per band (equivalent of the length of a nozzle).

Configure the print driver for print quality setting Standard to enable standard mode.

#### c) High quality mode

Imaging data prints in two, four or eight passes per band.

Configure the print driver for print quality High to enable high quality mode.

#### d) Highest quality mode

Imaging data prints in eight or 16 passes per band.

Configure the print driver for print quality Highest to enable highest quality mode.

### 2.2.4 Print Control

iPF8000S

#### 1. Print mode

This printer is capable of fast, high-quality printing without blur and non-uniform density by changing the carriage operation, media feeding, other printing methods

---

according to the selected media type, print quality, print data and so on.

Printing is performed for each color using a maximum of 16 paths in each print mode according to the selected print quality.

This reduces density irregularities caused by the variation in the amounts of ink discharged from individual nozzles. In addition, it shifts the printing timing so that the current ink layer is nearly fixed before the next ink layer is applied, thus minimizing bleeding.

Even in the same mode, the printer operates in a different way depending on the media setting made using the printer driver.

**a) Draft mode**

In the draft mode, image data is thinned out and a single band (equivalent to the width of a nozzle array) is printed using two paths.

To use this mode, select "Draft" under "Print Quality" in the printer driver.

**b) Standard mode**

In the standard mode, a single band (equivalent to the width of a nozzle array) is printed using 4-8 (4, 6, or 8) paths.

To use this mode, select "Standard" under "Print Quality" in the printer driver.

**c) High quality mode**

In the high quality mode, a single band is printed using 8 or 12 paths.

To use this mode, select "High" under "Print Quality" in the printer driver.

**d) Highest quality mode**

In the high quality mode, a single band is printed using 12 or 16 paths.

To use this mode, select "Highest" under "Print Quality" in the printer driver.

2.2.5 Print Control

iPF8100

1. Print mode

This printer is capable of fast, high-quality printing without blur and non-uniform density by changing the carriage operation, media feeding, other printing methods according to the selected media type, print quality, print data and so on.  
Printing is performed for each color using a maximum of 16 paths in each print mode according to the selected print quality.  
This reduces density irregularities caused by the variation in the amounts of ink discharged from individual nozzles. In addition, it shifts the printing timing so that the current ink layer is nearly fixed before the next ink layer is applied, thus minimizing bleeding.  
Even in the same mode, the printer operates in a different way depending on the media setting made using the printer driver.

a) Draft mode

In the draft mode, image data is thinned out and a single band (equivalent to the width of a nozzle array) is printed using two paths.  
To use this mode, select "Draft" under "Print Quality" in the printer driver.

b) Standard mode

In the standard mode, a single band (equivalent to the width of a nozzle array) is printed using 4-8 (4, 6, or 8) paths.  
To use this mode, select "Standard" under "Print Quality" in the printer driver.

c) High quality mode

In the high quality mode, a single band is printed using 8 or 12 paths.  
To use this mode, select "High" under "Print Quality" in the printer driver.

d) Highest quality mode

In the high quality mode, a single band is printed using 12 or 16 paths.  
To use this mode, select "Highest" under "Print Quality" in the printer driver.

### 2.2.6 Print Position Adjustment Function

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

This printer supports a print position adjustment for the vertical and horizontal print positions, the bidirectional print position of the printhead mounted on the carriage, and the feedrate.

There are two adjustment modes for the print: automatic adjustment, in which print position adjustment patterns printed are detected by the multi sensor attached to the lower left part of the carriage, and manual adjustment, in which print position adjustment patterns that are slightly modified from one another are printed, so that visually verified adjustment values can be set from the operation panel.

To make print position adjustments, A3-or-larger-sized roll media or cut media are needed.

### 2.2.7 Head Management

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

This printer supports a nozzle check function to spot non-discharging nozzles in the printhead.

When the printer detects a non-discharging nozzle, it starts cleaning the printhead automatically to correct its discharge failure. If cleaning does not work, the printer backs up the non-discharging nozzle with an alternative nozzle automatically to ensure unfailing print performance.

Detection timings (automatic):

Power-on, carriage cover open detection, print start (check timing variable by selecting Nozzle Check from the system menu).

### 2.2.8 Printhead Overheating Protection Control

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

When an abnormal temperature rise in the printhead is detected, overheating protection control launches.

Overheating could occur in the printhead after a period of print operations without the nozzles being filled with inks.

Overheating protection control is implemented on the basis of the temperature detected by the head temperature sensor for each nozzle. When an abnormal temperature is detected in any nozzle train, overheating protection control is exerted at one of two levels according to that temperature.

Protection level 1:

If the head temperature sensor (DI sensor) detects a temperature higher than the protection temperature, it halts the carriage temporarily at the scan end position in the direction of travel according to the carriage scan status.

Printing resumes when the printhead radiates naturally to cool down below a predetermined temperature or when 30 seconds or longer have elapsed since the detection of the higher temperature.

Protection level 2:

If the head temperature sensor (DI sensor) detects a temperature higher than the abnormal temperature, the printer shuts down the print operation immediately, moving the carriage to the home position for capping, with an error indication on the display.

### 2.2.9 Pause between Pages

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

An inter-page function is available to prevent ink rubbing, which keeps paper just printed hanging above the platen and waiting for a predetermined period of time before delivery.

The wait time is user-programmable from the print driver. This feature is particularly useful on paper that takes time to dry after printing, such as film.

### 2.2.10 White Raster Skip

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

This printer supports a white raster skip function to bypass carriage scanning in a consecutive sequence of voids in print data, for added throughput.

### 2.2.11 Sleep Mode

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The printer has sleep mode to reduce its standby power requirement.

The printer transitions to sleep mode automatically when it has been left idle or no print data has been received for a predetermined period of time while the printer is online or offline.

The printer exits sleep mode when any operation panel key is activated or print data is received from the host computer.

The time to transition to sleep mode is variable from the operation panel (Default: 5minutes).

### 2.2.12 Hard Disk Drive

iPF8000S / iPF8100 / iPF8300 / iPF8300S

This printer features a hard disk drive, which provides the following functions.

- Early release of the host computer
- Error recovery
- Job preservation
- Preserved job print
- Job queue handling

#### 1) Early release of the host computer

Each print job received from the host computer is preserved to the hard disk drive attached to the printer, so the printer can proceed with independent printing, releasing the host computer before the print job completes.

**2) Error recovery**

If a print job aborts as a result of any print problem, such as a paper jam or insufficient paper, the printer reloads the print job stored on the hard disk so it can resume the print job without having to retransmit the job from the host computer to it.

**3) Job preservation**

Print jobs are in the common box, a place of temporary data storage, and in the personal box, a place of permanent data storage.

Normal print jobs are stored in the common box as they are received. Due to the limited hard disk space available, jobs stored in the common box are deleted from the oldest one in sequence.

Print jobs can be simply stored in the personal box without printing. Print jobs stored in the common box can be moved to the personal box.

**4) Preserved job handling**

Print jobs stored in the personal box or common box can be printed from the operation panel.

**5) Job queue handling**

Multiple jobs queued for print can be handled, including the raising priority order of selected jobs in the queue or canceling selected print jobs.

## 2.3 Printer Mechanical System

### 2.3.1 Outline

#### 2.3.1.1 Outline

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The printer mechanism is broken down into two broad sections: ink passage and paper passage.

The ink passage consists primarily of the carriage unit[2] that houses ink tanks[1] and a printhead, purge unit[3] and maintenance cartridge[4], and supplies, which circulates, sucks and otherwise handles inks.

The paper passage consists of mechanical components, such as the paper feed unit[5], which is designed to feed, convey and deliver paper in two ways.

A summary description of each mechanical component of the printer is given below.

F-2-20

## 2.3.2 Ink Passage

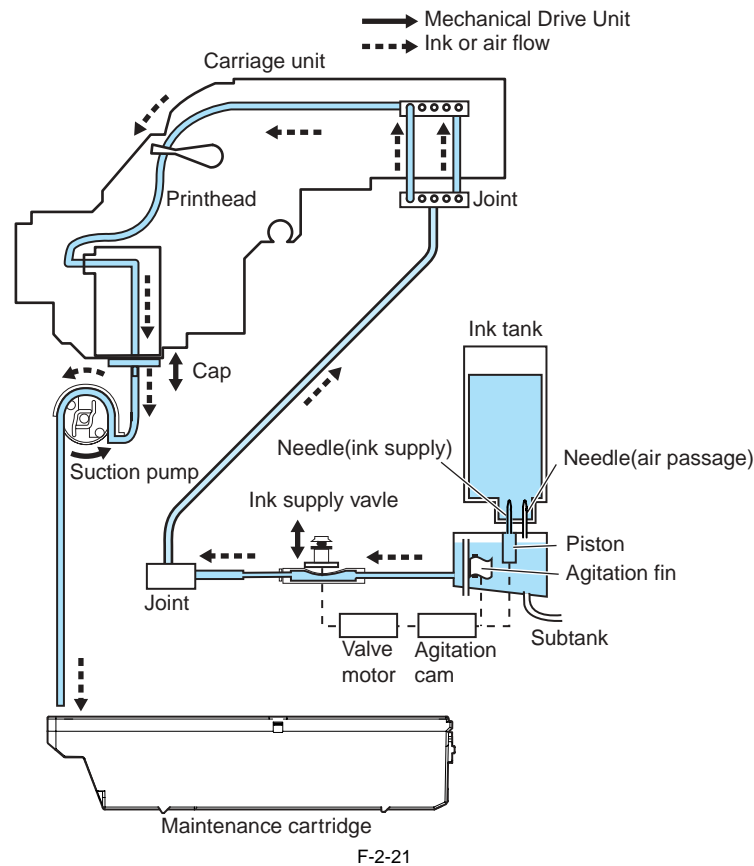

### 2.3.2.1 Ink Passage

#### 2.3.2.1.1 Overview of Ink Passage

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The ink passage comprises ink tanks, a printheads, caps, a maintenance jet tray, a maintenance cartridge, ink tubes interconnecting the mechanical components of the printer, and a suction pump that is driven to suck inks. It supplies, circulates, sucks and otherwise handles inks.

The ink passage (per color) is schematically shown below, along with the ink flow.

#### a) Supplying inks from the ink tanks to the ink supply valve assembly

The ink tanks each contain ink to feed the printhead.

Head differences allow the inks to flow from the ink tanks to the sub-tanks first, then to the ink supply valves.

Air is discharged through the air passage of the sub-tanks to keep the internal pressure of the ink tanks constant.

#### b) Supplying inks from the ink supply valves to the printhead

The ink stored in an ink tank flows to the printhead when the suction pipe is driven with the ink supply valve opened and the head capped.

#### c) Supplying inks while printing

The ink supply valves are kept open while printing, so that ink is constantly flowing to the printhead under the negative pressure of the nozzle assembly which is caused by the discharging inks.

Furthermore, waste inks sucked in the cleaning operation and inks from the maintenance jet tray flow into the maintenance cartridge.

Opening all the ink passages (by opening both the ink supply valve and the printhead fixer lever with an ink tank yet to be installed) while an ink tube is being filled with ink could cause the ink in the ink tube to flow backwards due to a head pressure difference, causing leakage through the hollow needle in the ink tank. As a precaution, never open all the ink passages at the same time while the ink tubes are being filled with inks.

#### d) Ink agitating

Ink will be agitated to prevent the element of the pigment ink from subsiding in the ink tank and the sub-tank.

The valve motor drive is transmitted to the agitation cam, the agitation fin in the sub-tank rotates and ink in the sub-tank will be agitated. In addition, ink flows backward by moving the piston under the needle(ink supply) up and down in the ink tank, and ink in the ink tank will be agitated.

## 2.3.2.2 Ink Tank Unit

### 2.3.2.2.1 Structure of Ink Tank Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Ink tanks

The ink level in each ink tank is memorized in EEPROM attached to the tank and is detected as a dot count on the basis of the EEPROM information. When an electrode attached to a hollow needle detects no continuity, it displays a message reporting that the ink tank is nearly empty. If the dot count reaches a predesigned value in this state, an ink out condition is assumed.

#### b) Ink port

Depressing the ink tank fixer lever on the printer would cause a hollow needle to pierce the ink tank port sealed by a rubber plug, linking the ink passage of the ink to the printer.

#### c) Air passage

Depressing the ink tank fixer lever on the printer would cause an open hollow needle to pierce the air passage sealed by a rubber plug releasing the internal pressure of the ink tank to keep it constant.

#### d) Notches for preventing incorrect installation

Ink tanks are furnished with a notch for preventing incorrect installation.

If the installation of an ink tank in incorrect position is attempted, the notch would interfere with it, preventing its installation.

The ink tank fixer lever won't lower without the ink tank fully inserted to reach the mounting position, so the ink cannot be supplied.

F-2-22

T-2-6

[1] Ink tank

[3] Ink port

[5] Notch for preventing incorrect installation

[2] EEPROM

[4] Air passage

e) Subtank

The subtank installed under each ink tank complements the work of the ink tank, agitating the ink in the tank.

If the ink tank runs out of the ink while printing, the ink stored in the subtank is available, allowing the ink tank to be replaced without having to stop printing.

f) Ink supply valves

Ink tank supply valves are located halfway between the ink tanks and the ink tubes. These valves prevent the leakage of inks that might otherwise be caused by the opening of the ink tubes on the side of the ink tanks during their replacement.

The ink supply valves are caused to open and close by the valve open/close mechanism that is activated by driving the valve motors.

The ink tank unit consists of tank bases each are organized into one group of six colors, and six-color ink tubes.

The color-specific ink supply valves are linked with the valve cams so they will open and close at the same time for all colors.

### 2.3.2.3 Carriage Unit

#### 2.3.2.3.1 Functions of Carriage Unit

iPF8000 / iPF8000S / iPF8100

##### a) Printhead mounting function

The carriage, which fixes the printhead in position mechanically, is connected to the contacts of the head relay PCB.

##### b) Control function

The carriage carries a carriage relay PCB, which relays drive signals from the main controller PCB, a head relay PCB, which relays printhead drive signals to the printhead, a linear encoder, which generates print timing signals, and a multi sensor, which detects the width of paper and skews in it, adjusts its registration and the head height.

The carriage relay PCB is connected to the main controller PCB by a flexible cable.

##### c) Carriage drive function

The carriage is moved over the platen by means of the carriage belt that is driven by the power imparted from the carriage motor.

##### d) Printhead maintenance function

This printer performs cleaning operations, such as wiping the printhead and sucking inks, with the carriage halted at its home position.

##### e) Nozzle check function

This printer carries out an ink discharge operation with the carriage halted at the head management sensor, locating a non-discharging nozzle in the printhead.

##### f) Carriage height adjustment function

If the separation between the face of the printhead and the paper (carriage height) is varied as a result of differing paper thicknesses, crooked or curled paper or other problems, the printer is liable to generate excess mist as the carriage height increases or to result in head rubbing as the carriage height decreases.

To maintain an acceptable carriage height, the lift motor is driven according to the selected paper type, feeding method, print conditions (borderless printing/prioritized picture quality), environmental condition (temperature/humidity) and multi sensor measurements to automatically adjust the separation between the face of the printhead and the paper.

The table below shows the relation between the media type and the height of the head.

T-2-8

Height of printhead (mm)	Media type	Remarks
1.4 (Lowest)	Photopaper, Synthetic paper, Film, Plain paper(Line drawing)	Capping position
1.8 (Low)	Coated paper(Line drawing)	
2.0 (Standard)	Plain paper, Coated paper, Fabric banner	
2.2 (High)	Premium matte paper, Fine art(watercolor,block print)	
2.6 (Highest)	Canvas	

##### g) Paper leading edge detection function/paper width detection function/skew detection function

The multi sensor attached to the lower left part of the carriage detects the leading edge and width of paper feeding on the platen and any skews in it.

##### h) Automatic printhead position adjustment function

The multi sensor attached to the lower left part of the carriage reads an adjustment pattern printed on a form and adjusts the print timing of each printhead automatically.

##### i) Remaining roll media detection function

The printer prints a bar code on roll media upon installation of the roll media. The multi sensor attached to the lower left part of the carriage detects the remaining roll length.

##### j) Internal unit temperature sensor

A thermistor installed on the head relay PCB detects the internal unit temperature near the printhead.

### 2.3.2.3.2 Functions of Carriage Unit

iPF8300 / iPF8300S

#### a) Printhead mounting function

The carriage, which fixes the printhead in position mechanically, is connected to the contacts of the head relay PCB.

#### b) Control function

The carriage carries a carriage relay PCB, which relays drive signals from the main controller PCB, a head relay PCB, which relays printhead drive signals to the printhead, a linear encoder, which generates print timing signals, and a multi sensor, which detects the width of paper and skews in it, adjusts its registration and the head height.

The carriage relay PCB is connected to the main controller PCB by a flexible cable.

#### c) Carriage drive function

The carriage is moved over the platen by means of the carriage belt that is driven by the power imparted from the carriage motor.

#### d) Printhead maintenance function

This printer performs cleaning operations, such as wiping the printhead and sucking inks, with the carriage halted at its home position.

#### e) Nozzle check function

This printer carries out an ink discharge operation with the carriage halted at the head management sensor, locating a non-discharging nozzle in the printhead.

#### f) Carriage height adjustment function

If the separation between the face of the printhead and the paper (carriage height) is varied as a result of differing paper thicknesses, crooked or curled paper or other problems, the printer is liable to generate excess mist as the carriage height increases or to result in head rubbing as the carriage height decreases.

To maintain an acceptable carriage height, the lift motor is driven according to the selected paper type, feeding method, print conditions (borderless printing/prioritized picture quality), environmental condition (temperature/humidity) and multi sensor measurements to automatically adjust the separation between the face of the printhead and the paper.

The table below shows the relation between the media type and the height of the head.

T-2-9

Height of printhead (mm)	Media type (reference)	Remarks
1.2	Plain paper	
1.4	Photopaper, Synthetic paper, Film, Plain paper (Line drawing)	Capping position
1.8	Coated paper (Line drawing)	
2.0	Plain paper, Coated paper, Fabric banner	
2.2	Premium matte paper, Fine art (watercolor, block print)	
2.6	Canvas	

#### g) Paper leading edge detection function/paper width detection function/skew detection function

The multi sensor attached to the lower left part of the carriage detects the leading edge and width of paper feeding on the platen and any skews in it.

#### h) Automatic printhead position adjustment function

The multi sensor attached to the lower left part of the carriage reads an adjustment pattern printed on a form and adjusts the print timing of each printhead automatically.

#### i) Remaining roll media detection function

The printer prints a bar code on roll media upon installation of the roll media. The multi sensor attached to the lower left part of the carriage detects the remaining roll length.

#### j) Internal unit temperature sensor

A thermistor installed on the head relay PCB detects the internal unit temperature near the printhead.

### 2.3.2.3.3 Structure of Carriage Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Printhead mount

The printhead is secured to the carriage by the printhead fixer cover and the printhead fixer lever.

When the printhead is secured to the carriage, the signal contact of the head relay PCB is pressed against that of the printhead to convey print signals. Furthermore, the ink passage from the ink tanks is connected to the printhead via the ink tubes.

#### b) Ink port

Ink is supplied to the printhead via an ink tube, which is connected to ink joints, and runs between the tube guides to reach the carriage and follow its movement.

F-2-24

T-2-10

- [1] Carriage motor
- [2] Printhead fixer lever
- [3] Printhead fixer cover
- [4] Electrical contact
- [5] Ink tube

#### c) Controller

The Carriage relay PCB is connected to the head relay PCB by means of a short flexible cable.

The flexible cable between the main controller and the carriage relay PCB follows up the motion of the carriage together with the tube guide.

A photocoupler encoder mounted in the lower part of the back of the carriage detects a linear scale reading as the carriage moves.

#### d) Carriage drive

Mechanical misregistrations in the vertical/horizontal and bidirectional print positions of the printhead mounted can be corrected by selecting Adjust Printer from the main menu to shift the print timing.

A DC-operated carriage motor drives the carriage reciprocally on the platen by way of the carriage belt.

The carriage home position, or the capping position, is detected by the sensor flag on the right side of the carriage and the photointerrupter-based carriage HP sensor on the right side of the printer. When the linear scale position is set as a reference home position for use in subsequent position control operations, the carriage motor is driven by a control signal generated from the main controller PCB.

#### e) Printhead maintenance unit

This printer cleans the printhead with the carriage halted at its home position.

Wiping takes place through the rotation of the motor.

Wiper blades mounted on the carriage wipe the printhead while the carriage is halted at its home position.

Wet wiping is carried out for added wiping removal performance, whereby the wiper blades are moistened with glycerin as they are pressed against an absorber impregnated with glycerin.

Maintenance jet ejection is carried out on the cap, at the maintenance jet tray, borderless printing ink tray and on the paper surface.

A suction operation is carried out by a suction cap in the purge unit.

#### f) Carriage height adjustment unit

The head height is adjusted with the carriage halted at its home position.

The lift motor is driven to rotate the lift shaft within the carriage, in sync with which the lift cams on both sides of the carriage move the head holder up and down,

thereby varying the separation between the face of the printhead and the paper.

The printhead height is detected from the lift cam sensor within the carriage and the distance of rotation of the lift motor.

#### g) Multi sensor

The multi sensor attached to the lower left part of the carriage consists of four LEDs (red, blue, green, infrared) and two light-receiving sensors to detect the leading edges and width of paper and skews in it, and to adjust its registration and head height.

The multi sensor standard has a white plate attached to it, so that a reference value can be calculated during carriage height measurement by measuring the intensity of light reflected upon the white plate.

(Service mode: SERVICE MODE>ADJUST>GAP CALIB)

#### h) Rail cleaner

The shaft cleaner located in the right rear of the carriage helps keep the main rail clean.

#### i) Internal unit temperature sensor

One thermistor is installed on the head relay PCB on the back of the head holder to detect the internal unit temperature.

[1]	Carriage relay PCB	[7]	Shaft cleaner
[2]	Multi sensor	[8]	Maintenance jet tray
[3]	Head relay PCB	[9]	Carriage HP sensor
[4]	Lift cam sensor	[10]	Multisensor reference
[5]	Sensor flag	[11]	Head management sensor unit
[6]	Lift cam	[12]	Lift motor

#### 2.3.2.4 Printhead

#### 2.3.2.4.1 Structure of Printhead

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Each printhead is an integrated assembly of six trains of nozzles. Capable of controlling each nozzle individually, each printhead implements discharge control for six colors by itself.

### a) Nozzle arrangement

**a) Nozzle arrangement**  
The nozzle assembly is formed of 1,280 nozzles arranged at 600-dpi intervals in a zigzag pattern, offering a total of 2,560 nozzles 1,200-dpi intervals.

F-2-26

### b) Nozzle assembly structure

**b) Nozzle assembly structure**  
Inks supplied from the ink tanks are filtered through a mesh ink filter before being sent to the nozzle assembly.

Each nozzle train is supplied with an ink from the common nozzle chamber.

A head drive current subsequently flowing through the nozzle heater boils the ink, generating bubbles to discharge ink drops from the nozzle assembly.

F-2-27

### 2.3.2.5 Purge Unit

#### 2.3.2.5.1 Functions of Purge Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

To maintain high print quality, the purge unit performs maintenance of the nozzles of the printhead. The purge unit supports a capping function, cleaning function, and ink supply function.

##### a) Capping function

The capping function presses the cap of the purge unit against the face plate on the nozzle section of the printhead to prevent nozzle drying and dust adhesion. Capping is performed when printing is complete, at the start of the suction operation, and when switching to the standby state due to an error. The capping function also establishes the ink passage between the printhead and purge unit.

##### b) Cleaning function

The cleaning function restores the printhead to the state where ink can be easily discharged from nozzles. This function includes the following three types of operations.

###### - Wiping operation

This operation is performed to remove paper fibers and dried ink from the face plate.

###### - Pumping operation

This operation is performed to remove ink from the nozzles and fill the nozzles with fresh ink.

###### - Maintenance jet operation

This operation is performed to spray ink from the nozzles to the cap, the borderless ink jet tray, and on paper to remove bubbles in the nozzles and dust and other foreign particles.

##### c) Ink supply function

The suction pump of the purge unit operates together with the ink supply valve to supply ink to the printhead during the initial filling and ink level adjustment.

Details of the cleaning function are shown in the table below.

T-2-12

Cleaning mode	Name of Service mode or PRINT INF (Name of Main Menu)	Operation	Description of cleaning
Cleaning 1	CLN-A-1/CLN-M-1 (Head Cleaning A)	Normal cleaning	Removes dried ink from nozzles, thick ink accumulated on the face, and paper particles.
Cleaning 2	CLN-A-2	Ink level adjustment and cleaning	Adjust the ink level in the head by suction, and then performs normal cleaning.
Cleaning 3	CLN-A-3	Initial filling ink	Fills the empty tube (during initial installation) with ink, and then performs normal cleaning.
Cleaning 4	CLN-M-4 (Replace P.head)	Ink drainage for head replacement	Drains ink to replace the head (drains only the ink in the head).
Cleaning 5	CLN-M-5 (Move Printer)	Ink drainage for secondary transport	Drains ink from the head and tube for secondary transport.
Cleaning 6	CLN-A-6/CLN-M-6 (Head Cleaning B)	Normal (strong) cleaning	Performs suction stronger than when adjusting the ink filling amount in the head or normal cleaning to unclog nozzles.
Cleaning 7	CLN-A-7	Aging	Performs idle ejection after replacement of the head.
Cleaning 10	CLN-A-10 (Move Printer)	Ink filling after secondary transport	Fills the empty tube (during installation after secondary transport) with ink, and performs normal cleaning.
Cleaning 11	CLN-A-11	Ink filling after head replacement	Performs normal cleaning after head replacement and ink filling.
Cleaning 15	CLN-A-15	Dot count suction	Performs suction to remove ink adhered to dried nozzles and thick ink accumulated on the face when the dot count reaches the prescribed value.
Cleaning 16	CLN-A-16	Precipitated ink agitation	Performs the agitation (ink supply valve open/close) operation to prevent the ink ingredient from precipitating.
Cleaning 17	CLN-A-17	Cleaning (weak)	Performs cleaning weaker than normal cleaning to unclog nozzles.

Cleaning operation timings are as follows.

Printer status				Cleaning operation	Consumption (typ.)*1
Standby	168 hours elapsed capped			Cleaning 1 (Normal Cleaning)	1g
	At least 720 to 960 hours elapsed since the last session of Cleaning 2, 3, 6 or 10 (480 hours after initial installation)			Cleaning 6 (Normal (strong) Cleaning)	5g
	At initial installation and 96 hours elapsed since the last session of Cleaning 16			Cleaning 16 (Precipitated ink agitation)	-
	1 hour elapsed capped with a specified number of dots discharged per chip completed after last wiping			Wiping + Idle ejection	0.013g
Power-on	At initial installation			Cleaning 3 (initial filling ink)	40g
	Both heads and inks available	The print operation has completed.	168 to 720 hours elapsed capped	Cleaning 1 (Normal Cleaning)	1g
			At least 720 to 960 hours elapsed since the last session of Cleaning 2, 3, 6 or 10 (360 to 480 hours after initial installation)	Cleaning 6 (Normal (strong) Cleaning)	5g
			At least 960 to 2160 hours elapsed since the last session of Cleaning 2, 3, 6 or 10 (480 hours after initial installation)	Cleaning 2 (Ink level adjustment and cleaning)	10g
			At least 96 hours elapsed since the last session of Cleaning 16	Cleaning 16 (Precipitated ink agitation)	-
			At least 1 hour elapsed capped with a specified number of dots discharged per chip completed after last wiping	Wiping + Idle ejection	0.013g
		Print operation aborted (uncapped) and CR error occurring	Up to 72 hours elapsed after an abort	Cleaning 1 (Normal Cleaning)	1g
			Over 72 hours elapsed after an abort	Cleaning 6 (Normal (strong) Cleaning)	5g
		Print operation aborted (uncapped) and no CR error occurring		Cleaning 11 (ink filling after head replacement)	10g
	No heads are available			Cleaning 10 (ink filling on secondary transport)	40g
Power off	Specified number of dots discharged per chip completed since the last session of wiping			Wiping + Idle ejection	0.013g
Before the start of printing	Less than 168 hours elapsed capped			Idle ejection	0.013g
	At least 168 hours elapsed capped			Cleaning 1 (Normal Cleaning)	1g
	Before printing in the wake of an error occurrence			Cleaning 1 (Normal Cleaning)	1g
Printing	Before scanning while printing			Idle ejection (+Wiping)	- (0.013g)
After the end of printing	A specified number of dots (color) discharged per chip since the last session of Cleaning 2, 3, 6 or 10			Cleaning 6 (Normal (strong) Cleaning)	5g
	A specified number of dots discharged per chip after the last session of wiping			Wiping + Idle ejection	0.013g
	3 minutes elapsed since the last session of capping			Wiping + Idle ejection	0.013g
	Total 2 hours elapsed uncapped since the last session of Cleaning 1, 2, 3, 6 or 10			Cleaning 1 (Normal Cleaning)	1g
When the Head Cleaning menu choice is executed	Manual Cleaning (Head Cleaning A)			Cleaning 1 (Normal Cleaning)	1g
	Manual cleaning (Head cleaning B)			Cleaning 6 (Normal (strong) Cleaning)	5g
When the Replace Print Head menu choice is executed	After head replacement			Cleaning 2 (ink level adjustment and cleaning) + Cleaning 4 (ink drainage for head replacement)	10g
When the Move Printer menu choice is executed	After the Move Printer menu choice is executed			Cleaning 5 (ink drainage for secondary transport)	10g
	After power-on at secondary installation			After power-on at secondary installation	15g

\*1: Quantities of ink consumption by nozzle train

### 2.3.2.5.2 Structure of Purge Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Caps

The caps cap the nozzle assembly in the left printhead during capping and cleaning. The part of the caps that comes into contact with the face plate of the nozzle assembly is made of rubber. Two caps are in position to meet each of the printheads mounted on the carriage (six trains of nozzles).

The caps are activated to protect the nozzle assembly on capping. When the carriage moves to the home position, the caps are elevated by the cap cam that is driven by the capping motor, capping the nozzle assembly to protect it.

These caps cap the nozzle assembly to suck inks from the printhead by means of the suction pump.

#### b) Wipers

The wipers are driven by the purge motor to wipe the six trains of nozzles in the nozzle assembly in the printhead simultaneously.

A pair of wiper blades are in position to ensure wiping performance. The wiping operation operates on a slide wiping basis, sliding the wiper blades via wiper cams through the normal rotation of the purge motor.

Wiping is executed by the wiper blades moving at a constant speed to the front of the printer after the end of a print or suction operation.

A wiper blade set perpendicularly to the head wipes the entire face of the printhead, followed by a narrower blade wiping the nozzle assembly.

The wiper blades are cleaned before they are replaced at the wiping position after wiping to preserve wiping performance.

Wiper blade cleaning is carried out by scraping off the inks that have been wiped off from the head with an ink scraper linked to the maintenance cartridge, then wiping the blades with a blade cleaner.

Wet wiping is carried out for added wiping removal performance, whereby the wiper blades are moistened with glycerin as they are pressed against an absorber impregnated with glycerin. The quantity of glycerin used is managed by counting the number of times the wiper blades have been pressed against the absorber. When this count falls to equal any of the following values, either a replacement warning (continued print available) or replacement required indication (service call error) is issued.

T-2-13

Display	Times
Replacement warning indication	71,250 times
Service calls	75,000 times

**c) Pump**

The pump (suction pump) is a tube pump that pressurizes the ink tubes with rotating rollers to generate a negative pressure for sucking inks. A single tube is sequentially pressurized by a pair of rotating rollers to control the level of ink suction by a wide margin.

The timing at which the rotating rollers rotate is detected by the pump cam sensor, with the distance of rotation being controlled by the driving of the purge motor.

F-2-30

### 2.3.2.6 Maintenance Cartridge

#### 2.3.2.6.1 Maintenance Cartridge

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

##### a) Maintenance cartridge

The maintenance cartridge holds as much about 1200 mL of used inks (about 1280 g: including the evaporation of moisture from the used inks).

##### b) Used maintenance cartridge ink detection

Used maintenance cartridge ink detection is monitored with regard to a dot count.

When the quantity of the used ink reaches about 960 mL (about 1024 g, 80% of the cartridge capacity), the warning message "Check maint cartridge capacity" is displayed to tell that the maintenance cartridge is nearly full.

Printing may continue even when the warning message is displayed.

When the quantity of the used ink reaches about 1200 mL (about 1280 g, 100% of the cartridge capacity), a replacement prompt error message is displayed, telling that the maintenance cartridge is full.

When the printer determines that the maintenance cartridge is full, it shuts down even while it is printing.

The printer will remain inoperable until the maintenance cartridge is replaced.

---

##### Memo:

The maintenance cartridge houses EEPROM, so that main controller PCB can control the status of the maintenance cartridge by writing to and reading from the EEPROM content.

There is no need to initialize the counter information, therefore, when the maintenance cartridge is replaced.

---

### 2.3.2.7 Air Flow

#### 2.3.2.7.1 Air Flow

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

This printer has two fans, a mist fan used to collect mist and a suction fan used to suck media onto the platen. Ink mists floating during printing or springing back from the paper are collected in the mist fan unit by air flow in the printer. Two mist fans located on the rear side of the printer makes the airflow that carries the ink mists to the mist fan unit.

F-2-32

A duct is located under the platen, along with a platen ink box unit used for collecting waste ink during borderless printing and idle discharges. The suction fan collects the ink mist in the duct into the suction fan duct unit.

F-2-33

## 2.3.3 Paper Path

### 2.3.3.1 Outline

#### 2.3.3.1.1 Overview of Paper Path

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The key components of the paper passage consist of a feed roller assembly, a pinch roller drive that locks and releases the pinch roller and sensors that detect the feed status of paper. It feeds paper in trays, conveys and delivers paper.

#### Basic operation of the roll media loading sequence

- 1) Multi sensor light quantity adjustment.
- 2) Paper leading edge detection sensor.
- 3) Paper left edge detection sensor.
- 4) Barcode read.
  - \* Performed only if Chk Remain.Roll is turned on.
- 5) Paper skew detection sensor.
- 6) Paper right edge detection sensor.
- 7) Trim edge first detection sensor.
  - \* Performed only if Trim Edge First is turned on.
- 8) Leading edge cutting.
  - \* Leading edge cutting is executed under the following conditions.
    - a. Trim Edge First is set to Forced.
    - b. Trim Edge First is set to Automatic, and the need for cutting determined.
    - c. A barcode is detected when Chk Remain.Roll is on (forced cutting, regardless of the setting of Trim Edge First).
- 9) Paper leading edge detection sensor.

#### Basic operation of the cut sheet loading sequence

- 1) Paper trailing edge detection sensor.
- 2) Multi sensor light quantity adjustment.
- 3) Paper width detection sensor.
- 4) Paper leading edge detection sensor.
- 5) Paper skew detection sensor.

---

#### Memo:

Press the [ ▼ ] key while the printer is offline to deliver paper, the [ ▲ ] key to rewind the paper.

---

### 2.3.3.2 Paper Path

#### 2.3.3.2.1 Structure of Feed Roller Unit

iPF8000 / iPF8000S / iPF8100

a) Paper feed assembly

The paper feed assembly consists of paper feeding mechanisms, such as a feed roller that is driven by the feed motor and a pinch roller unit that follows up the motion of the feed roller.

Paper feeds horizontally under the printheads on the carriage as it is kept level on the platen to prevent cockle.

b) Sensors

The paper feed assembly includes sensors for detecting the status of paper feeding and that of the mechanical components that make up the paper passage.

For more details, see TECHNICAL REFERENCE > Detection Functions with Sensors.

c) Roll media spool drive

The paper feed assembly is complete with a roll media spool drive unit to prevent roll media from slacking as they feed. The roll media spool drive unit rewinds roll media by turning on the spool clutch. The spool clutch turns on only when roll media feed rearward. Driving force is imparted from the feed motor to rotate the roll holder for rewinding the media. The spool clutch remains off when roll media feed forward.

F-2-34

### 2.3.3.2.2 Structure of Feed Roller Unit

iPF8300 / iPF8300S

#### a) Paper feed assembly

The paper feed assembly consists of paper feeding mechanisms, such as a feed roller that is driven by the feed motor and a pinch roller unit that follows up the motion of the feed roller.

Paper feeds horizontally under the printheads on the carriage as it is kept level on the platen to prevent cockle.

#### b) Sensors

The paper feed assembly includes sensors for detecting the status of paper feeding and that of the mechanical components that make up the paper passage. For more details, see TECHNICAL REFERENCE > Detection Functions with Sensors.

#### c) Roll media pick-up drive unit

When the roll media feeds, the roll media pick-up pressure clutch 1 turns on to actuate the torque limiter in the pick-up drive unit. Thus the back tension works to prevent the roll media from sags or skew.

At this time, if the paper tube of roll media is inside diameter of 3 inches, the pick-up pressure solenoid and roll media pick-up pressure clutch 2 turn on to increase the back tension (about 2.6 times higher than before).

F-2-35

### 2.3.3.3 Cutter Unit

#### 2.3.3.3.1 Structure of Cutter Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

If the print driver is configured to use a cutter with roll media, cutter unit attached to the left side of the carriage cuts roll media automatically. Cutter unit won't cut roll media if the print driver is configured otherwise.

F-2-36

## 2.4 Printer Electrical System

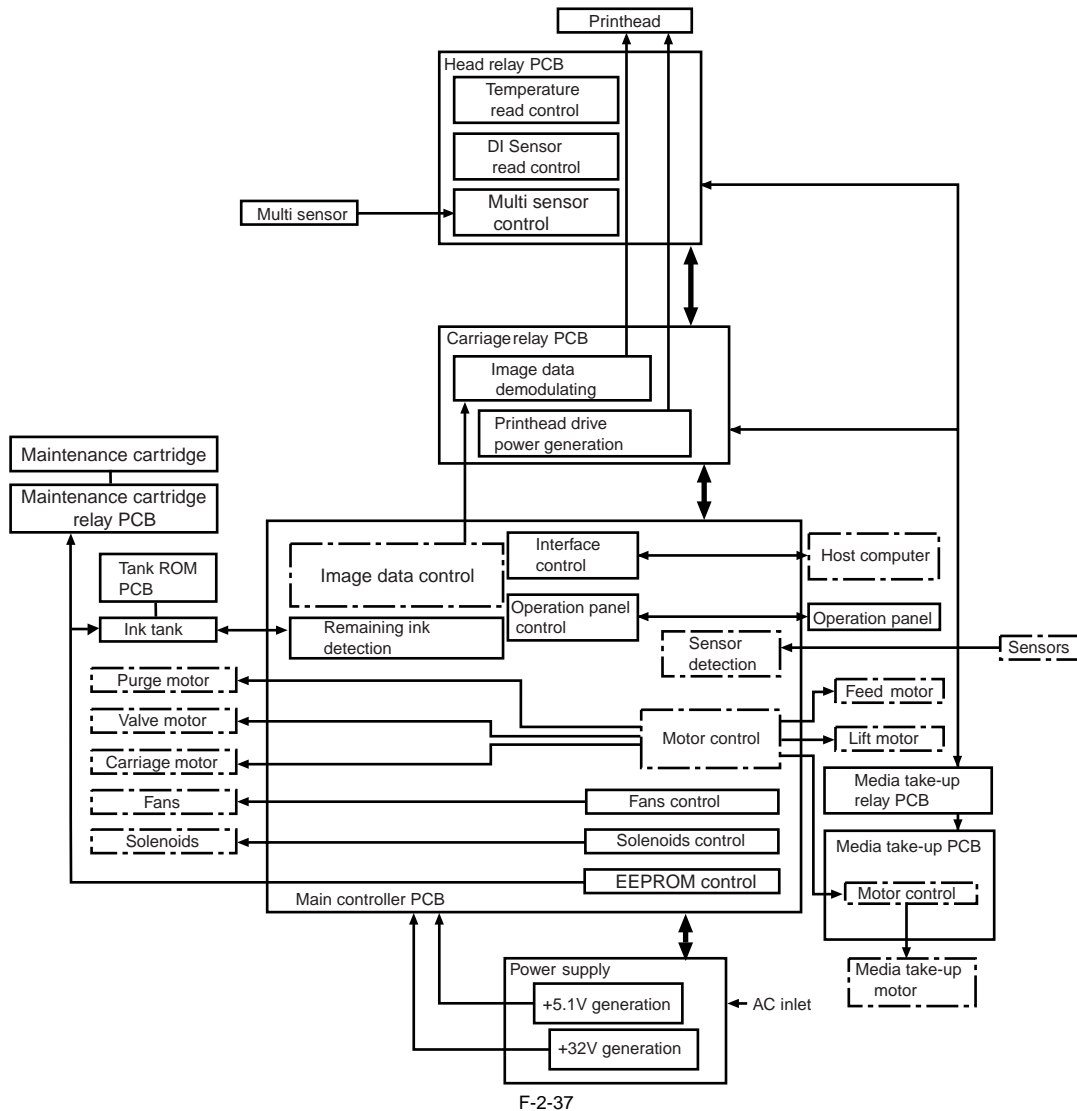

### 2.4.1 Outline

#### 2.4.1.1 Overview

iPF8000

The printer electrical system consists of the main controller PCB and power supply PCB which are mounted on the back side of the printer, the carriage relay PCB, the head relay PCB, and printhead which are mounted in the carriage, the operation panel on the right upper cover and other electrical components such as sensors, and motors.

The main controller PCB manages the image data processing and the entire electrical system, and controls relay PCBs and driver functions.

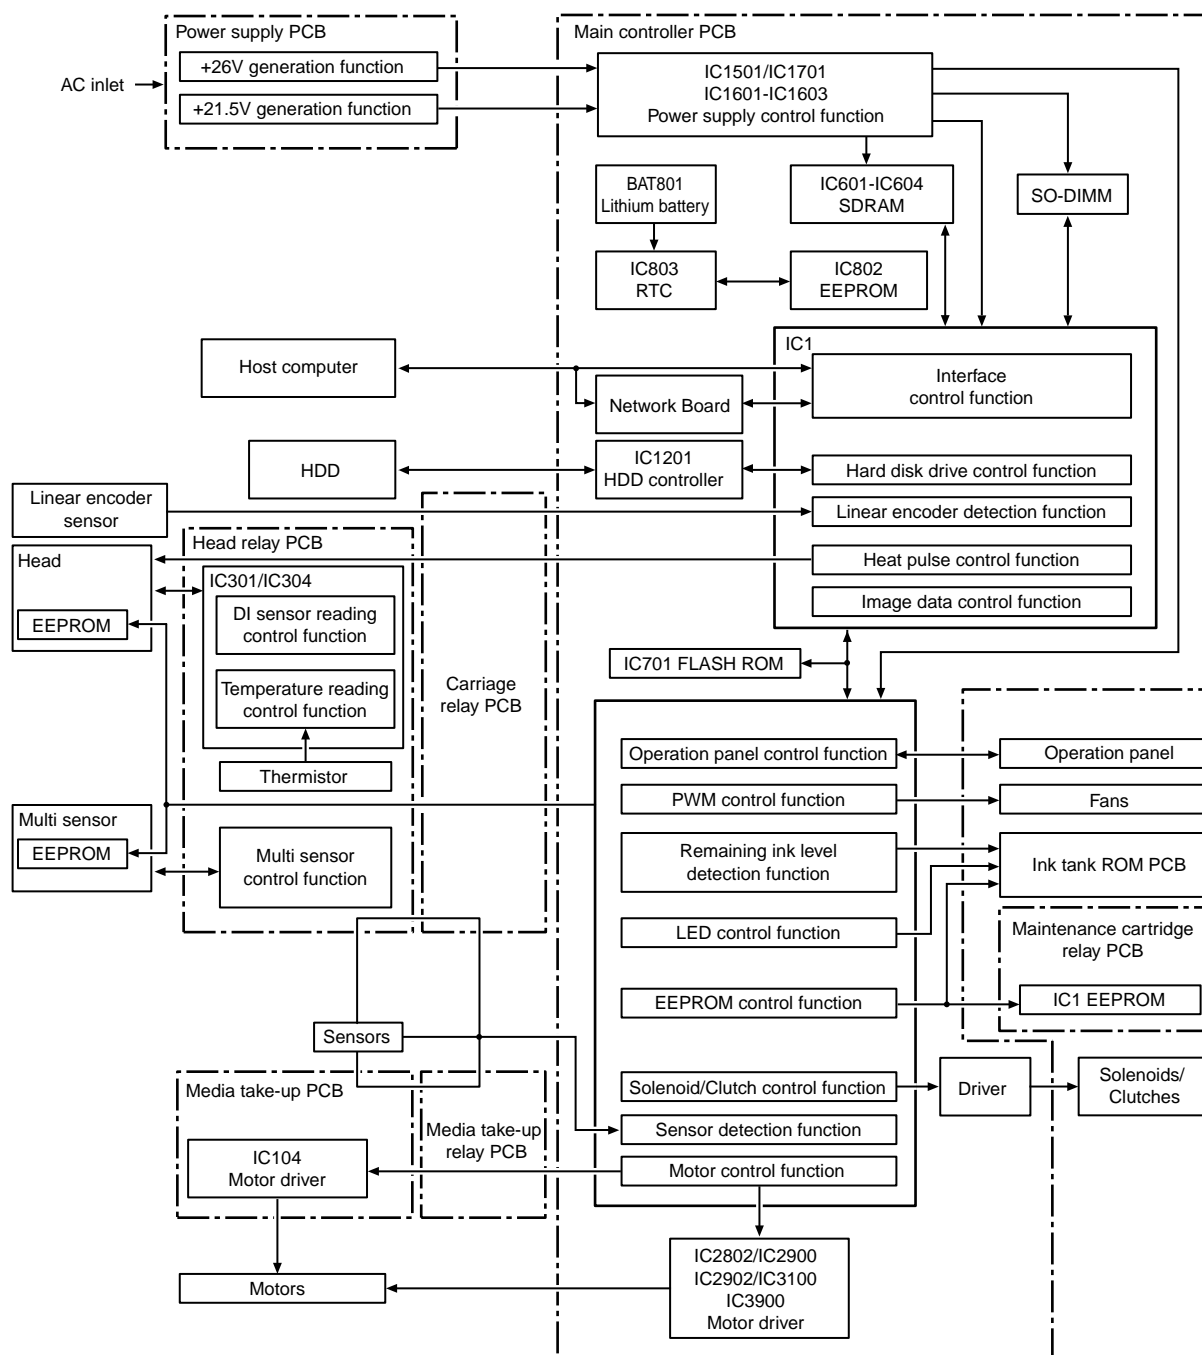

#### 2.4.1.2 Overview

iPF8000S / iPF8100

The printer electrical system consists of the main controller PCB and power supply PCB which are mounted on the back side of the printer, the carriage relay PCB, the head relay PCB, and printhead which are mounted in the carriage, the operation panel on the right upper cover and other electrical components such as sensors, and motors.

The main controller PCB manages the image data processing and the entire electrical system, and controls relay PCBs and driver functions.

F-2-39

### 2.4.1.3 Overview

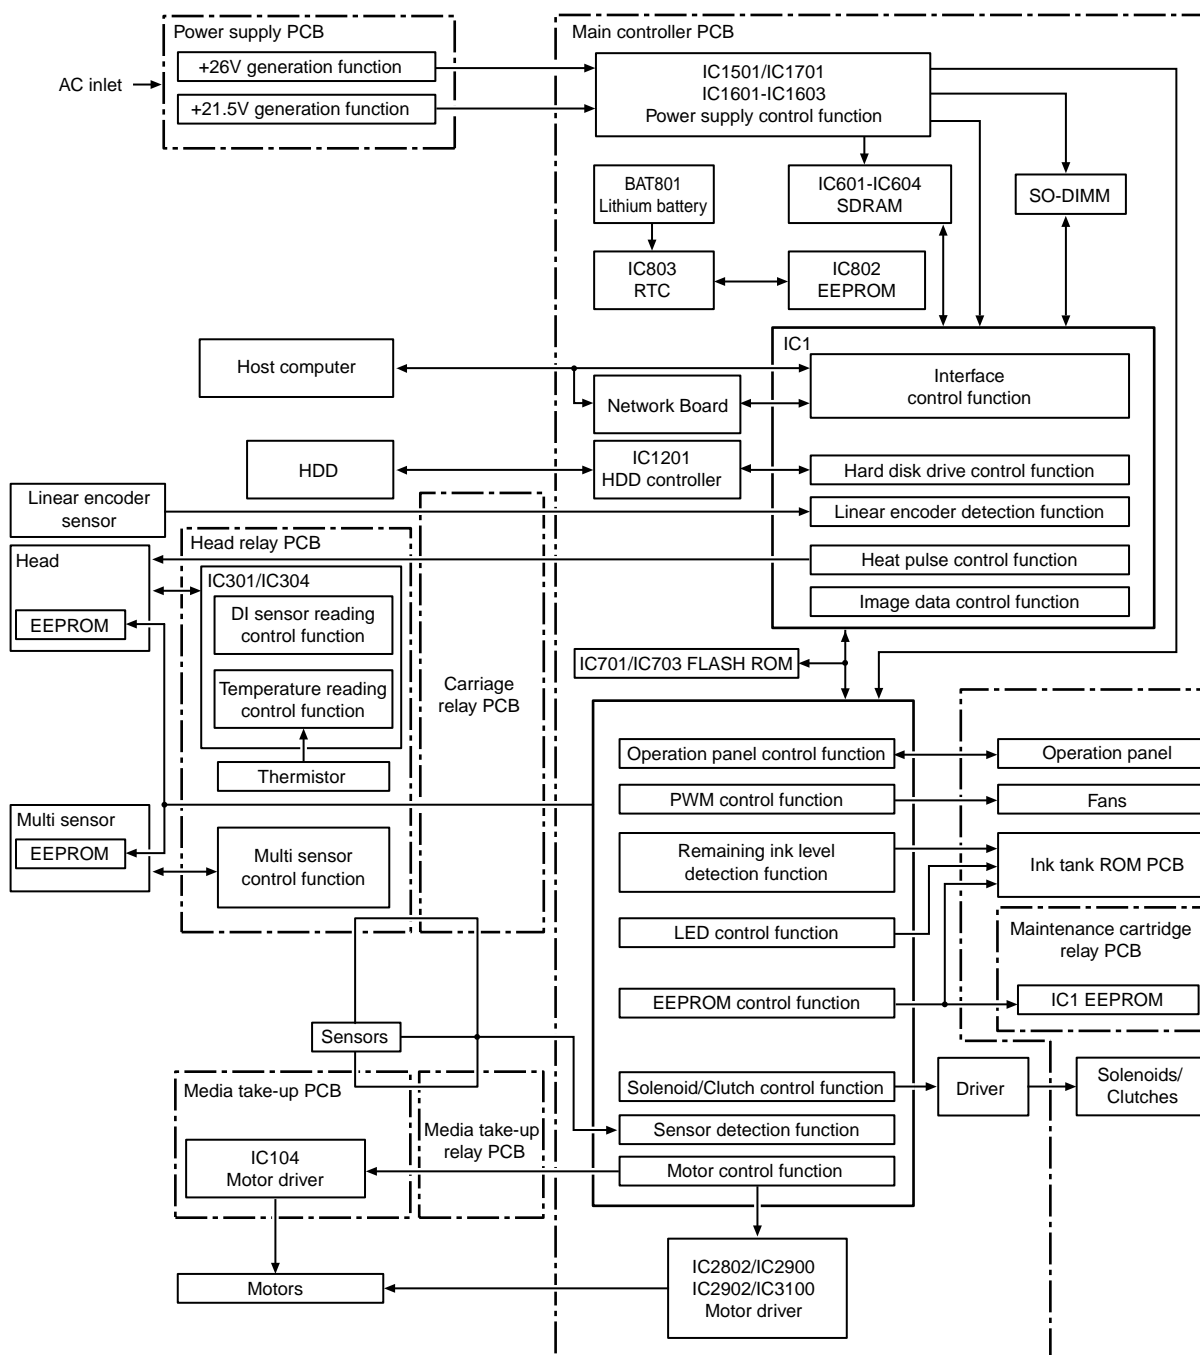

iPF8300 / iPF8300S

The printer electrical system consists of the main controller PCB and power supply PCB which are mounted on the back side of the printer, the carriage relay PCB, the head relay PCB, and printhead which are mounted in the carriage, the operation panel on the right upper cover and other electrical components such as sensors, and motors.

The main controller PCB manages the image data processing and the entire electrical system, and controls relay PCBs and driver functions.

F-2-41

## 2.4.2 Main Controller

### 2.4.2.1 Main controller PCB components

iPF8000

#### a) ASIC(IC1,IC2)

The ASIC(IC1/IC2) with a 32/16-bit internal bus is driven in sync with the 132/66 MHz external clock. It supports the following functions:

##### Image processing unit

This unit converts the RGB multi-bit image data or CMYK multi-bit data received from the host computer through the interface connector to the binary image data for the ink colors used.

##### DMA controller

This controller controls the input interfaces such as the USB and expansion card slot as well as DMA transfer of the data to be stored in the DIMM.

##### Image data generation/output function

This function generates image data for color printing from the received image data and the mask pattern (corresponding to print mode) stored in the DIMM, and store the generated image data in another DIMM. It also outputs the generated image data to the carriage relay PCB.

##### Interrupt controller

This controller receives and processes internal interrupts and external interrupts from the USB, image processing unit, and expansion card slot.

##### Timer function

Even when the printer is turned off, the timer function is held on using the RTC and secondary lithium battery to assist the cleaning function. When the power cord is plugged to the outlet, power is supplied to the RTC and therefore the secondary lithium battery power is not consumed.

##### Heat Enable signal control function

This function uses the pulse width to perform variable control of the time of application of the Heat Enable signal to the nozzle heater for each nozzle array (PWM control).

##### Linear scale count function

This function reads the linear scale when the carriage moves, thus generating the ink jet timing. It also counts the linear scale timing cycle using the reference clock to measure the carriage moving speed.

##### Dot count function

This function counts the fired dots used as the information for Heat Enable signal control, maintenance jet control, cleaning control, and remaining ink level for each nozzle array.

##### Operation panel control function

This function controls serial communication with the operation panel.

##### PWM control function

This function controls driving of the suction fan and mist fan as well as the temperature of the printhead.

##### Remaining ink level detection function

This function detects the remaining level of each color of ink based on the signal received from the hollow needle mounted in the ink tank unit.

##### LED control function

This function controls the LEDs on the ink tank unit.

##### I/O port function

This function controls input signals from sensors.

##### Power ON/OFF control function

This function controls turning on/off of the drive power (32V and 5.1V) supplied from the power supply PCB.

##### Head DI sensor read control function

This function controls read operation by the head DI sensor.

##### Multi sensor control function

This function controls the LED, gain adjustment, and controls obtainment of the reading of the multi sensor.

##### EEPROM control function

This function controls the EEPROMs of individual ink tanks, the maintenance cartridge EEPROM, the EEPROM on the maintenance cartridge relay PCB, and the head EEPROM in addition to the on-board EEPROM.

##### Motor control function

This function controls the carriage motor, feed motor, valve motor, purge motor, lift motor based on the input signals from sensors.

#### b) Driver IC (IC3100)

This IC generates a carriage motor control signal based on the control signal from the ASIC.

#### c) Driver IC (IC2802)

This IC generates feed motor control signal based on the control signal from the ASIC.

**d) Driver IC (IC2900)**

This IC generates purge motor and valve motor(R) control signals based on the control signal from the ASIC.

**e) Driver IC (IC3900)**

This IC generates valve motor(L) control signals based on the control signal from the ASIC.

**f) Regulator IC (IC3203)**

This IC generates the 3.3 V to be supplied to the tank ROM board.

**g) DIMMs (IC601, IC602, IC603, IC604)**

The DIMM comprising a 512-MB DDR-SDRAM and a 128-MB SDR-SDRAM is connected to the 32-bit data bus to be used as a work area. During print data reception, it is also used as an image buffer. It cannot be expanded.

**h) FLASH ROM (IC701)**

A 128-MB flash ROM is connected to the 8-bit data bus to store the printer control program.

**i) EEPROM (IC802)**

The 128-KB EEPROM stores various setting values, adjustment values, log data, counter values related to the user/servicing.

---

**MEMO:**

After replacement of the main controller PCB, the printer must be started up in the service mode to copy over the setting and adjustment values to the new PCB properly (the service mode will be switched to the PCB replacement mode automatically).

---

### 2.4.2.2 Main controller PCB components

iPF8000S / iPF8100

F-2-43

#### a) ASIC (IC1/IC2)

The ASIC(IC1/IC2) with a 32/16-bit internal bus is driven in sync with the 132/66 MHz external clock. It supports the following functions:

##### Image processing unit

This unit converts the RGB multi-value image data or CMYK multi-value data received from the host computer through the interface connector to the binary image data for the ink colors used.

##### DMA controller

This controller control DMA transfer of the data transferred through the input interfaces such as the USB and expansion card slot as well as DMA transfer of the data stored in the DIMM.

##### Image data generation/output function

This function generates image data for color printing from the received image data and the mask pattern (corresponding to print mode) stored in the FLASH ROM, and stored the generated image data in DIMM. It also outputs the generated image data to the carriage PCB.

##### Interrupt controller

This controller receives and processes internal interrupts and external interrupts from the USB, image processing unit, and expansion card slot.

##### Timer function

Even when the printer is turned off, the timer function is held on using the RTC(IC803) and lithium battery(BAT801) to assist the cleaning function. When the power cord is plugged to the outlet, power is supplied to the RTC and therefore the lithium battery power is not consumed.

##### Heat Enable signal control function

This function uses the pulse width to perform variable control of the time of application of the Heat Enable signal to the nozzle heater board for each printhead nozzle array.

##### Linear scale count function

This function reads the linear scale when the carriage moves, thus generating the ink discharge timing. It also counts the linear scale timing cycle using the reference clock to measure the carriage moving speed.

##### Dot count function

This function controls the discharge dots used as the information for Heat Enable signal control, maintenance jet control, cleaning control, and remaining ink level for each nozzle array.

##### Operation panel control function

This function controls serial communication with the operation panel.

##### PWM control function

This function controls driving of the suction fan and mist fan as well as the temperature of the printhead.

##### Remaining ink level detection function

This function detects the remaining level of each color of ink based on the signal received from the hollow needle mounted in the ink tank unit.

##### LED control function

This function controls the LEDs on the ink tank unit.

##### I/O port function

This function controls input signals from sensors.

##### Power ON/OFF control function

This function controls turning on/off of the drive power (26 V and 21.5 V) supplied from the power supply PCB.

##### Head DI sensor read control function

This function controls read operation by the head DI sensor.

##### Multi sensor control function

This function controls the LED, adjusts the gain, and controls obtainment of the reading for the multi sensor.

---

**EEPROM control function**

This function controls the EEPROMs of individual ink tanks, the maintenance cartridge EEPROM, the EEPROM on the maintenance cartridge relay PCB, and the head EEPROM in addition to the on-board EEPROM.

**Motor control function**

This function controls the carriage motor, feed motor, valve motor, purge motor and lift motor based on the input signals from sensors.

**b) Driver IC (IC3100)**

This IC generates a carriage motor control signal based on the control signal from the ASIC.

**c) Driver IC (IC2802)**

This IC generates feed motor control signal based on the control signal from the ASIC.

**d) Driver IC (IC2900)**

This IC generates purge motor and valve motor (R) control signals based on the control signal from the ASIC.

**e) Driver IC (IC3900)**

This IC generates a valve motor (L) control signal based on the control signal from the ASIC.

**f) DIMMs (IC601/IC602/IC603/IC604)**

The DIMM comprising a 128-MB SDR-SDRAM is connected to the 32-bit data bus to be used as a work area. During print data reception, it is also used as an image buffer. It cannot be expanded.

**g) FLASH ROM (IC701)**

A 128-MB flash ROM is connected to the 8-bit data bus to store the printer control program.

**h) EEPROM (IC802)**

The 128-KB EEPROM stores various setting values, adjustment values, log data, counter values related to the user/servicing.

**i) SO-DIMM**

The 256-MB SO-DIMM (J401) is connected to the 32-bit data bus to be used as a work area. During print data reception, it is also used as an image buffer. It cannot be expanded.

**j) HDD controller (IC1201)**

This controller controls the hard disk drive.

---

**MEMO:**

After replacement of the main controller PCB, the printer must be started up in the service mode to copy over the setting and adjustment values to the new PCB properly (the service mode will be switched to the PCB replacement mode automatically).

---

### 2.4.2.3 Main controller PCB components

iPF8300 / iPF8300S

F-2-44

#### a) ASIC (IC1/IC2)

The ASIC(IC1/IC2) with a 32/16-bit internal bus is driven in sync with the 330/66 MHz external clock. It supports the following functions:

##### Image processing unit

This unit converts the RGB multi-value image data or CMYK multi-value data received from the host computer through the interface connector to the binary image data for the ink colors used.

##### DMA controller

This controller control DMA transfer of the data transferred through the input interfaces such as the USB and expansion card slot as well as DMA transfer of the data stored in the DIMM.

##### Image data generation/output function

This function generates image data for color printing from the received image data and the mask pattern (corresponding to print mode) stored in the FLASH ROM, and stored the generated image data in DIMM. It also outputs the generated image data to the carriage PCB.

##### Interrupt controller

This controller receives and processes internal interrupts and external interrupts from the USB, image processing unit, and expansion card slot.

##### Timer function

Even when the printer is turned off, the timer function is held on using the RTC(IC803) and lithium battery(BAT801) to assist the cleaning function. When the power cord is plugged to the outlet, power is supplied to the RTC and therefore the lithium battery power is not consumed.

##### Heat Enable signal control function

This function uses the pulse width to perform variable control of the time of application of the Heat Enable signal to the nozzle heater board for each printhead nozzle array.

##### Linear scale count function

This function reads the linear scale when the carriage moves, thus generating the ink discharge timing. It also counts the linear scale timing cycle using the reference clock to measure the carriage moving speed.

##### Dot count function

This function controls the discharge dots used as the information for Heat Enable signal control, maintenance jet control, cleaning control, and remaining ink level for each nozzle array.

##### Operation panel control function

This function controls serial communication with the operation panel.

##### PWM control function

This function controls driving of the suction fan and mist fan as well as the temperature of the printhead.

##### Remaining ink level detection function

This function detects the remaining level of each color of ink based on the signal received from the hollow needle mounted in the ink tank unit.

##### LED control function

This function controls the LEDs on the ink tank unit.

##### I/O port function

This function controls input signals from sensors.

##### Power ON/OFF control function

This function controls turning on/off of the drive power (26 V and 21.5 V) supplied from the power supply PCB.

##### Head DI sensor read control function

This function controls read operation by the head DI sensor.

##### Multi sensor control function

This function controls the LED, adjusts the gain, and controls obtainment of the reading for the multi sensor.

---

**EEPROM control function**

This function controls the EEPROMs of individual ink tanks, the maintenance cartridge EEPROM, the EEPROM on the maintenance cartridge relay PCB, and the head EEPROM in addition to the on-board EEPROM.

**Motor control function**

This function controls the carriage motor, feed motor, valve motor, purge motor and lift motor based on the input signals from sensors.

**b) Driver IC (IC3100)**

This IC generates a carriage motor control signal based on the control signal from the ASIC.

**c) Driver IC (IC2802)**

This IC generates feed motor control signal based on the control signal from the ASIC.

**d) Driver IC (IC2900)**

This IC generates purge motor and valve motor control signals based on the control signal from the ASIC.

**e) DIMMs (IC601/IC602/IC603/IC604)**

The DIMM comprising a 128-MB SDR-SDRAM is connected to the 32-bit data bus to be used as a work area. During print data reception, it is also used as an image buffer. It cannot be expanded.

**f) FLASH ROM (IC701/IC703)**

A 128-MB flash ROM is connected to the 8-bit data bus to store the printer control program.

**g) EEPROM (IC802)**

The 128-KB EEPROM stores various setting values, adjustment values, log data, counter values related to the user/servicing.

**h) SO-DIMM**

The 256-MB SO-DIMM (J401) is connected to the 32-bit data bus to be used as a work area. During print data reception, it is also used as an image buffer. It cannot be expanded.

**i) HDD controller (IC1201)**

This controller control the hard disk drive.

---

**MEMO:**

After replacement of the main controller PCB, the printer must be started up in the service mode to copy over the setting and adjustment values to the new PCB properly (the service mode will be switched to the PCB replacement mode automatically).

---

### 2.4.3 Carriage Relay PCB

#### 2.4.3.1 Carriage relay PCB components

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

F-2-45

##### a) Image data relay function

This function relays the image data from the main controller PCB to the printhead. The function for processing image data is not supported.

##### b) Sensor relay function

This function relays the input signals from the multi sensor, lift cam sensor, carriage cover sensor, and linear encoder to the main controller PCB.

### 2.4.4 Head Relay PCB

#### 2.4.4.1 Head relay PCB components

iPF8000

F-2-46

##### a) Latch IC (IC301, IC401)

###### DI sensor read control function

Obtains reading value of the DI sensor in the printhead and the head rank value for each color and outputs them to the main controller based on the control commands from the main controller.

###### Environment temperature read control function

Outputs the environment temperature detected by the thermistor on the head relay PCB to the main controller based on the control commands from the main controller.

###### Relay function of the power to the logic components in the printhead

Supplies the power to the logic components in the printhead based on the control commands from the main controller.

##### b) Multi sensor control IC

These IC's generate the LED control signals and make gain adjustment for the multi sensor.

##### c) Image data relay function

This function relays the image data from the main controller PCB to the printhead.

##### d) Sensor relay function

This function relays the input signals from the multi sensor, lift cam sensor, carriage cover sensor, and linear encoder to the main controller PCB.

### 2.4.4.2 Head relay PCB components

iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Latch IC (IC301, IC304)

##### DI sensor read control function

Obtains reading value of the DI sensor in the printhead and the head rank value for each color and outputs them to the main controller based on the control commands from the main controller.

##### Environment temperature read control function

Outputs the environment temperature detected by the thermistor on the head relay PCB to the main controller based on the control commands from the main controller.

##### Relay function of the power to the logic components in the printhead

Supplies the power to the logic components in the printhead based on the control commands from the main controller.

#### b) Multi sensor control IC

These IC's generates the LED control signals and makes gain adjustment for the multi sensor.

#### c) Image data relay function

This function relays the image data from the main controller PCB to the printhead.

#### d) Sensor relay function

This function relays the input signals from the multi sensor, lift cam sensor, carriage cover sensor, and linear encoder to the main controller PCB.

2.4.5 Motor Driver

2.4.5.1 Media take-up PCB components

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

a) Driver IC (IC104)

Media take-up motor drive function

This function controls the Media take-up motor based on the control signals from the main controller.

Sensor relay function

This function relays the input signals from the Media take-up paper detection sensor and Media take-up on/off sensor to the main controller PCB.

2.4.6 Maintenance Cartridge Relay PCB

2.4.6.1 Maintenance cartridge relay PCB components

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

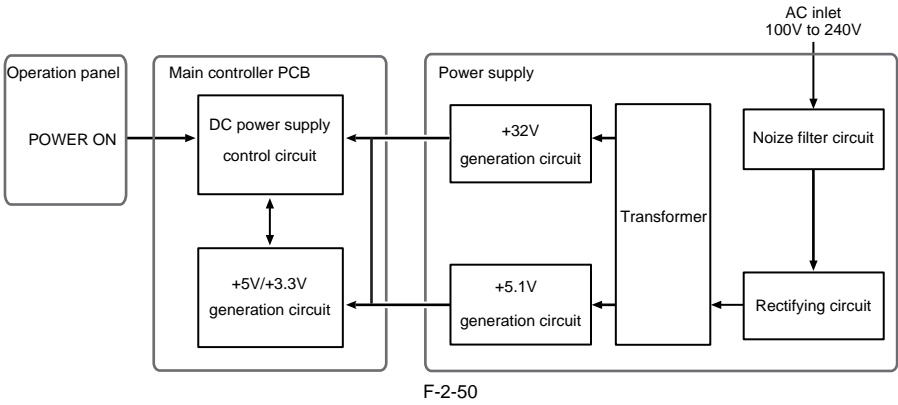

a) EEPROM (IC1)

The 2-KB EEPROM stores all information written in the EEPROM on the main controller PCB.

2.4.7 Power Supply

2.4.7.1 Power supply block diagram

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The power supply converts AC voltages ranging from 100V to 240V from the AC inlet to DC voltages for driving the ICs, motor, and others. The voltage generator circuits include the +32V generation circuit for driving motors, fans, and the +5.1V generator circuit for driving sensors, logic circuits. When in the power saving mode, the power supply cut out the +32V and the +5.1V. Power ON/OFF operation is controlled by the main controller PCB. When the upper cover is open, the power supply cut out only the +32V power to the carriage.

## 2.5 Detection Functions with Sensors

### 2.5.1 Sensors for covers

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### Upper cover lock switch (L) / (R)

The microswitch-based upper cover lock switches detect the open/closed states of the upper cover. When the upper cover closes, the switches are pressed to detect the closed state of the upper cover. The printer has one switch installed on the left and right sides each to prevent one-sided closure of the upper cover.

#### Ink tank cover switch (L) / (R)

The microswitch-based ink tank cover switches detect the open/closed states of ink tank covers. When an ink tank cover closes, the switches are pressed to detect the closed state of the ink tank cover.

#### Pressure release switch

The microswitch-based pressure release switch detects the status of the paper release lever. When the paper release lever closes, the switch is pressed to detect the closed state of the paper release lever.

2.5.2 Ink passage system

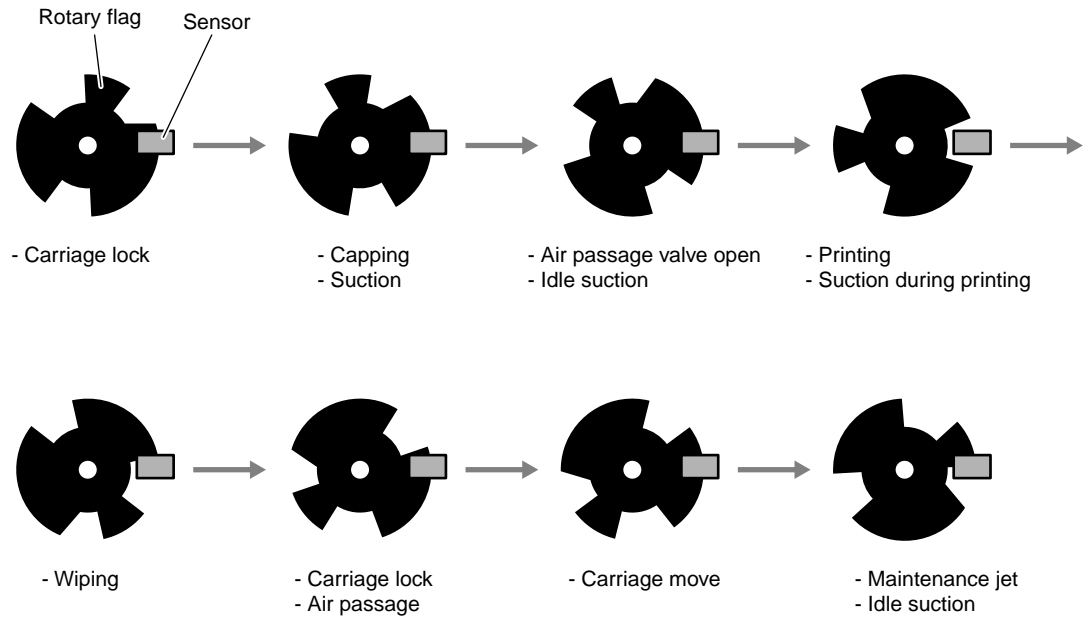

iPF8000 / iPF8000S / iPF8100

F-2-52

Pump cam sensor

As the cam rotates, it shields the sensor light of the photointerrupter-based pump cam sensor or allows it to be transmitted. The status of the purge unit, such as capped, suction and wiping, is detected by the combination of the pump cam sensor detection and the control of pump motor rotation by the pump encoder sensor.

F-2-53

**Pump encoder sensor**

The photointerrupter-based sensor reads slits in the encoder film of the Purge motor and controls the amount of its rotation accordingly.

**Valve open/closed detection sensor**

The photointerrupter-based valve open/closed detection sensor detects the status of the valve.

The sensor detects that the ink supply valve is open when the sensor light is shielded by a flag linked with the valve cam.

**Agitation cam sensor**

The photointerrupter-based agitation cam sensor detects the status of the agitation cam.

The sensor detects the agitation cam home position when the sensor light allows it to be transmitted.

**Ink detection sensor**

The ink detection sensor detects the presence or absence of the ink in an ink tank with respect to the status of continuity between two hollow needles.

When the ink level in the tank falls to a point below the wall surrounding the hollow needles in the air passage, continuity with the hollow needle on the ink supply side is disrupted, causing the sensor to detect that the ink is out.

**Head management sensor**

The phototransmitter-based head management sensor detects the status of ink discharge from the printhead.

The carriage iteratively moves and stops at the detection position for each nozzle train, discharging inks nozzle by nozzle while it is halted.

The sensor detects discharging nozzles from the voltage changes produced by the drops of an ink discharged from one nozzle at a time shielding the sensor light.

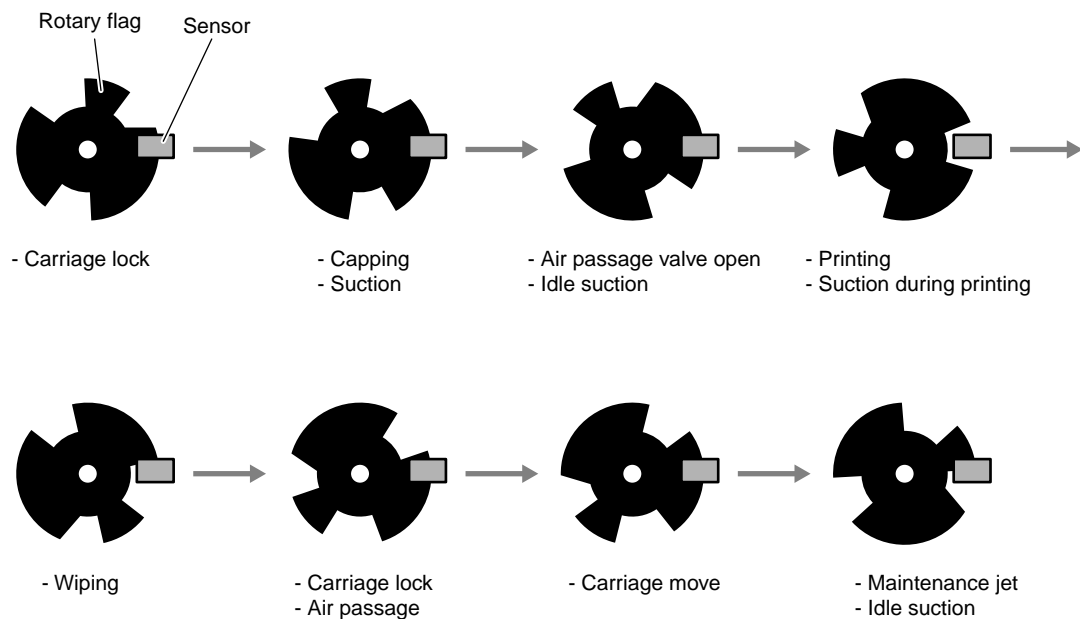

2.5.3 Ink passage system

iPF8300 / iPF8300S

**Pump cam sensor**  
As the cam rotates, it shields the sensor light of the photointerrupter-based pump cam sensor or allows it to be transmitted. The status of the purge unit, such as capped, suction and wiping, is detected by the combination of the pump cam sensor detection and the control of pump motor rotation by the pump encoder sensor.

**Pump encoder sensor**

The photointerrupter-based sensor reads slits in the encoder film of the Purge motor and controls the amount of its rotation accordingly.

**Valve open/closed detection sensor**

The photointerrupter-based valve open/closed detection sensor detects the status of the valve.

The sensor detects that the ink supply valve is open when the sensor light is shielded by a flag linked with the valve cam.

**Agitation cam sensor**

The photointerrupter-based agitation cam sensor detects the status of the agitation cam.

The sensor detects the agitation cam home position when the sensor light allows it to be transmitted.

**Ink detection sensor**

The ink detection sensor detects the presence or absence of the ink in an ink tank with respect to the status of continuity between two hollow needles.

When the ink level in the tank falls to a point below the wall surrounding the hollow needles in the air passage, continuity with the hollow needle on the ink supply side is disrupted, causing the sensor to detect that the ink is out.

**Head management sensor**

The photo-transmission-type sensor detects that the printhead is discharging ink.

The carriage moves to and stops at the detection positions for individual nozzle arrays. When the carriage is at a stop, nozzles discharge ink one after another.

The sensor detects each nozzle due to the voltage change caused when ink discharged from the nozzle blocks the sensor light.

Non-discharging nozzle detection is carried out at the following timings:

- After the execution of Cleaning 1, Cleaning 2, Cleaning 3, Cleaning 6 or Cleaning 10
- After the number of copies that has been set by the user menu choice Nozzle Check Frequency have been printed

If more than a specified number of non-discharging nozzles have been located in one session of non-discharging nozzle detection, the normal cleaning sequence is launched before a second session of non-discharging nozzle detection is conducted. If more than a specified number of non-discharging nozzles are located in the second session of non-discharging nozzle detection, the normal (High) cleaning session is launched before a third session of non-discharging nozzle detection is conducted.

If there are at least 320 non-discharging nozzles out of 2560 nozzles as the result of non-discharging nozzle detection, printing is canceled after displaying a message to replace the head.

However, if service mode: [SERVICE MODE] > [SETTING] > [HEAD DOT INF] is [ON], the following message appears.

If there are at least 30 nozzles unable to correct the non-discharging state and the number of non-discharging nozzles is less than 100 out of 2,560 nozzles as the result of non-discharging nozzle detection, printing can continue after displaying a message to check the printing. Also, if the number of non-discharging nozzles is at least 100 but less than 320 nozzles, printing can continue after displaying a message to check the head. And if there are at least 320 non-discharging nozzles, printing is canceled after displaying a message to replace the head.

### 2.5.4 Carriage system

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

F-2-62

#### Carriage cover sensor

The photointerrupter-based carriage cover sensor detects the opening and closing of the carriage sensor. When the carriage cover is closed, the sensor light is shielded by the sensor arm, enabling the sensor to detect that the carriage cover is closed.

#### Carriage HP sensor

The photointerrupter-based carriage HP sensor detects the home position of the carriage. Installed on the right side plate of the printer, the sensor detects an edge of the carriage home position on the carriage unit under carriage movement control. The printer establishes the carriage home position from the position at which its edge is detected as a reference position.

#### Linear encoder sensor

Mounted on the back of the carriage, the linear encoder detects the position of the carriage from a slit in the linear scale during its movement.

#### Lift cam sensor

A photointerrupter-based sensor. After the sensor light is shielded by the flag, the lift motor is driven by a predetermined number of pulses to regulate the separation between the printheads and platen automatically.

#### Ambient temperature sensor

The thermostat-based ambient temperature sensor mounted on the head relay PCB detects the ambient temperature to which the carriage is exposed. The resistance of the thermistor that varies as a function of temperature changes in the printer is transmitted to the main controller via the carriage relay PCB. The ambient temperature is used to help calibrate the head temperature sensor and detect abnormal ambient temperatures.

#### Head temperature sensor

The head temperature sensor detects the temperature of the printhead. The printhead temperature is transmitted to the main controller via the carriage relay PCB. The printhead temperature is used to help control the head drive and detect abnormal printhead temperatures.

#### Printhead contact detection

The printhead contact detects the status of printhead installation by electrical means. The contact detects the status of contact from voltage changes in the flexible cables on the carriage side that come into contact with two terminals of the printhead with remote contact surfaces, the power terminals and GND terminal.

**Multi sensor**

The photo-reflection-type multi sensor is composed of four LEDs (red, blue, green and infrared) and two light-sensitive sensors. It detects the leading edge, skewing, and width of media and is used for adjustment of the registration, head height, and color calibration.

During head adjustment, the light reflected by the infrared LED and green LED is detected by two light-sensitive sensors to calculate the head height from the difference between the measurements.

When color calibration is executed, a color chart printed is read with three-color LED (red, blue, green), so color correction is implemented on the basis of the readings.

Ink mist adhering to the sensor could deliver incorrect measurement readings when color calibration is executed. If the ink dot count exceeds a tolerance, the service error (E194-4034) would occur. If it does, execute service mode: SERVICE MODE > ADJUST > GAP CALIB. after the multisensor has been replaced to clear the dot count.

F-2-63

- Service mode: After SERVICE MODE > ADJUST > GAP CALIB. has been carried out, pass paper to make sure that it is detected properly.
- In executing Calibration concurrently with the main menu choice Auto Head Adj. or Manual Head Adj., Auto Head Adj. or Manual Head Adj. first for the sake of higher color calibration accuracy.

### 2.5.5 Paper path system

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

F-2-64

**Media sensor**

The photoreflexor-based media sensor detects the presence or absence of paper on the platen. The sensor detects the presence of paper when it receives sensor light reflected upon the paper.

**Feed roller HP sensor**

The feed roller HP sensor detects transitions from white (transmitted), or a reference, to black (shielded) when the printer is switched on, thereby setting the home position of feed roller eccentricity correction.

**Feed roller encoder sensor**

The feed roller encoder sensor is driven to detect the length of paper feeding for each rotation of the feed roller from encoder slits.

## 2.5.6 Media take-up Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

F-2-65

### Media take-up on/off sensor

The photointerrupter-based media take-up on/off sensor detects the switch status of the media take-up unit. When the media take-up switch is set to ON, the sensor arm transmits the sensor light, power-on the media take-up unit. When the media take-up switch is set to OFF, the sensor arm shields the sensor light, shutting down the media take-up unit.

### Media take-up paper detection sensor

When the sensor light is shielded by a loop of printed paper, the media take-up motor rotates to take up the paper.

## 2.5.7 Others

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

F-2-66

### Humidity sensor

The humidity sensor detects the temperature and relative humidity around the printer to implement head height adjustment, maintenance jet control, waste ink evaporation calculation and suction fan control on the basis of the temperature and relative humidity thus measured.

### 3.1.2.3 Assembling the Stand

iPF8000 / iPF8000S / iPF8100

- Stand assembly requires two or more people working on a flat floor. Assembling the stand alone may cause injury or accidental bending of the stand.
- Stand casters are locked at the time of factory shipment. Do not release the lock until the stand has been fully assembled. In addition, release the lock before moving the stand. Moving the stand while the casters are locked may scratch the floor or cause injury.

1) Position the left stand leg and right stand leg so that the markings on the bottom are right-side up and can be read. Insert the left side of the bottom stand stay into the side slot [1] of the left stand leg, and insert the right side of the bottom stand stay into the side slot [2] of the right stand leg.

F-3-13

2) Secure the bottom stand stay to the left stand leg and the right stand leg using four M4 hex screws on each side.

F-3-14

3) Hold one end of the stand while a partner holds the other end. Rotate both end of the stand at the same time to stand it upright.

F-3-15

Rotate both ends of the stand simultaneously when standing the stand upright. Rotating only one side before the other may bend the stand and cause problems in assembly.

4) Insert the left end of the top stand stay into the side hole [1] on the left stand leg, and insert the right end of the top stand stay into the side hole [2] on the right stand leg, pushing the stay in completely.

F-3-16

**MEMO:**

Insert the left end of the top stand stay first. The right end can only be pushed into a restricted position.

5) Secure the top stand stay to the left and right stand legs using the four M8 hex bolts on each side.

F-3-17

6) Attach the leg cover to the left and right stand legs. Insert the protrusion [1] of the leg cover into the groove [2] of the top stand stay. Insert the protrusion [3] of the leg cover into the groove [4] of the bottom stand stay.

F-3-18

- 7) Secure the leg cover to the left and right stand legs using one M4 hex screws on each side.

F-3-19

### 3.1.2.4 Installing the Printer

iPF8000 / iPF8000S / iPF8100

Installing the printer must be done by more than four people.

- 1) Remove the black belts from around the printer and remove the top packaging material.

F-3-20

- 2) While two people are holding the carrying handles under the printer on one end and lifting the printer a little, have a third person to remove the packaging material from under the printer.  
Also remove the packaging material on the other side of the printer by the same way.

F-3-21

3) Hold the carrying handles under the printer by two to three people on each side, lift the printer.

F-3-22

F-3-23

- The printer weighs approximately 111kg (244.7lb). Moving the printer requires at least four people, two on either side. Be careful to avoid back strain and other injuries.  
- When moving the printer, firmly grasp the carrying handles under each side. Holding the printer at other positions is dangerous and may cause injury and damage if the printer is dropped.

4) Align the triangles on the back of the printer and the stand when setting the printer on the stand. Secure the printer and the stand firmly together using four M4 hex screws on each side.

F-3-24

### 3.1.2.5 Installing the Media Take-up Unit

iPF8000 / iPF8000S / iPF8100

1) In case the basket is installed, lift the front basket rod [1] gently to release the lock, lower the rod toward the front, and push it all the way back. Remove the front basket rod from the basket arms L and R, then roll up the basket cloth and put it behind the bottom stand stay.

2) Firmly secure the left and right media take-up unit mounting brackets to the front [1] and the back [2] of the top stand stay using four M4 hex screws on each side.

F-3-26

3) Hook up the hole [1] of the left media take-up unit with the protrusion [2] of the left media take-up unit mounting bracket, and hook up the hole [3] of the right media take-up unit with the protrusion [4] on the right media take-up unit mounting bracket. Secure the media take-up units firmly by using three M4 hex screws [5] on each side.

F-3-27

4) Place the media take-up sensor unit under the bottom stand stay, then pull up the cord of the media take-up sensor unit through the hole of the right stand leg.

F-3-28

5) With the media take-up sensor unit against the underside of the bottom stand stay and the right stand leg, insert M4 hex screws in the three holes [1] and slide the screws out of the way toward the narrow end of the protruding holes. Insert M4 hex screws in the small holes [2] as well. Then, tighten all five M4 hex screws firmly in the order shown from (2) to (6).

F-3-29

Arrange the basket cloth and basket rod so they do not interfere with the media take-up sensor (indicated by the dotted line).

F-3-30

6) Plug the cord of the media take-up sensor unit into the right media take-up unit.

F-3-31

7) Attach the cord holders [1] to the holes of the top stand stay. Bring the power cord of the right media take-up unit to the back of the printer and pass the cord through the cord holders. After passing the cord behind the holders, plug the cord into the power supply connector on the back of the printer.

F-3-32

When plugging in the power cord, be careful about the positions of the prongs. It may damage the cord or connector if you force the cord into the connector.

8) Load the left side of the media take-up spool on the media take-up unit so that the gear [1] on the right side of the media take-up spool meshes with the gear [2] of the right media take-up unit.

### 3.1.2.6 Installing the Basket

iPF8000 / iPF8000S / iPF8100

1) Insert the basket arm R [1] in the hole [2] on the right side of the bottom stand stay. Insert the right side [3] of the middle basket rod in the hole [4] of the basket arm R.

F-3-34

2) Insert the left side of the middle basket rod to the basket arm L [1] [A], then push in the arm fully into the hole on the left side of the bottom stand stay [B]. Secure the basket arm L [1] and R [2] using one M4 hex screw on each side [C].

F-3-35

3) Attach the rod holder to the rod holder adapter.

F-3-36

- 4) Insert the rod holder into each hole on the back of each stand leg.

F-3-37

- 5) Spread out the basket unit with white tag [1] of the basket cloth at the front on the right side and the black cord [2] at the back.

F-3-38

[2] [1]

- 8) Attach the basket rod (at the front of the basket unit) to the tips [1] of the basket arm L and R.

F-3-41

- 9) Pull the basket rod [1] (at the front of the basket unit) all the way out and lift the rod to lock the rod in place.

F-3-42

### 3.1.2.7 Removing Protection Materials

iPF8000 / iPF8000S / iPF8100

1) Remove the tape and other packaging material used to secure the printer.

F-3-43

2) Open the upper cover.

F-3-44

3) Lift the release lever [1] [A], remove the protective sheet [2] from the platen, and lower the release lever again [B].

F-3-45

- 4) Remove the screw and remove the belt stopper [1], and then remove the carriage spacer [2] pulling out toward the arrow direction.

F-3-46

**MEMO:**

Keep the belt stopper, screw, and the hex wrench which have been removed since these are needed when moving the printer to another location later. Neglecting to attach the belt stopper may cause damage to the printer when moving the printer to another location.

- 5) Lift the ejection guide.

F-3-47

- 6) Attach four eject supports [1] on the back of the ejection guide.

F-3-48

7) Close the ejection guide and the upper cover.

F-3-49

### 3.1.3 Checking the Images/Operations

#### 3.1.3.1 Checking the Image and Operation

iPF8000 / iPF8000S / iPF8100

Turn on the printer. Load the print heads, ink tanks, and media following the instructions shown on the operation panel. Install the printer driver in the PC, and carry out test printing.

## 3.2 Transporting the Printer

### 3.2.1 Transporting the Printer

#### 3.2.1.1 Transporting the Printer

iPF8100

When transporting the printer, the printhead must be capped and stay in the carriage. In spite of this precaution, shocks incurred during transportation can damage the printhead. Print the nozzle check pattern before making preparations for transporting the printer, print the nozzle check pattern again after installing the printer at the new location, and then compare the two printouts. If any problem such as nozzle clogging cannot be resolved by printhead cleaning, replace the printhead with a new one.

This section describes how to transport the printer. The procedure depends on the mode of transportation. Select the appropriate transportation level from the following transportation modes.

##### 1. Transportation mode

- Moving the printer on the same floor with no difference in grade (without tilting the printer): LEVEL 0
- Moving the printer on floor where there is difference in grade or by truck (by tilting the printer): LEVEL 1
- Moving the printer by plane or ship (tilting direction of printer is unpredictable): LEVEL 2
- Moving the printer in low temperature environment such as sub zero: LEVEL 2
- Moving the printer on its end: LEVEL 3

When lifting or moving the printer, be sure to hold the handle at bottom left and right of the printer. Holding the printer by its cover can deform the cover.

F-3-50

F-3-51

When tilting the printer, support the printer at bottom left and right side of the printer.  
If the printer is supported at any other location, the printer may be damaged or deformed.

F-3-55

**a. LEVEL 0**

Moving the printer on the same floor without difference in grade

T-3-10

Item	Description
[MOVE PRINTER] on the Main menu	This need not be performed.
Allowed tilting angle	Do not tilt.
Ink consumption	No ink is consumed.
Ink tank	It may be installed or removed.
Separation of main unit and stand	They do not need to be separated.
Maintenance cartridge	Install. There is no need to open a new maintenance cartridge.
Replacement of consumable parts	There is no need to replace consumable parts.
Service support	No service support is necessary.

**Transportation procedure**

- 1) Turn off the power and check that the heads are capped.
- 2) Open the upper cover and mount the belt stopper.

F-3-56

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

- 3) Close the upper cover.
- 4) Remove the paper and roll holder.
- 5) Remove power cord and interface cable.
- 6) Unlock the casters on the stand and move the printer slowly.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

**b. LEVEL 1**

Moving the printer on a floor with difference in grade or by truck

T-3-11

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 1].
Allowed tilting angle	Lengthwise: -30 to +30 degrees 
	Rotation: -10 to +10 degrees 
Ink consumption	No ink is consumed.
Ink tank	It may be installed or removed.
Separation of main unit and stand	They do not need to be separated.
Maintenance cartridge	Install. There is no need to open a new maintenance cartridge. However, if there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace with new maintenance cartridge before transporting.
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**Transportation procedure**

- 1) If there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace the maintenance cartridge.
- 2) Remove the paper and roll holder.
- 3) From [Main menu] > [Maintenance] > [MOVE PRINTER], select [LEVEL 1].
- 4) Press the [OK] key and perform [LEVEL 1] MOVE PRINTER.
- 5) If the consumable parts counter is checked and a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable part.  
See "d. Replacing consumable parts during transportation."
- Repeat [LEVEL 1] after replacing consumable parts and resetting the counter.
- 6) When MOVE PRINTER completed message appears, turn off the power, and remove the power cord and interface cable.
- 7) Open the upper cover and raise the ejection guide.

F-3-57

8) Remove the ejection support and lower the ejection guide.

F-3-58

9) Install the belt stopper.

F-3-59

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

10) Close the upper cover.

11) Attach the cushioning materials and tape.

12) Unlock the casters on the stand and move the printer slowly.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

**c-1. LEVEL 2**

Transporting by plane or ship

Transporting in low temperature environment such as sub zero

T-3-12

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 2].
Allowed tilting angle	Lengthwise: -30 to +30 degrees
	
	Rotation: -30 to +30 degrees
	
Ink consumption	Approximately 600ml of ink is consumed.
Ink tank	Remove all ink tanks.
Separation of main unit and stand	Separate.
Maintenance cartridge	Install. Have one new maintenance cartridge ready.
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**c-2. LEVEL 3**

Moving the printer on its end

T-3-13

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 3].
Allowed tilting angle	Lengthwise: -90 to +90 degrees
	
	Rotation: -30 to +30 degrees
	
Ink consumption	Approximately 1800ml of ink is consumed.
Ink tank	Remove all ink tanks.
Separation of main unit and stand	Separate.
Maintenance cartridge	Replace with new maintenance cartridge before performing transporting procedure. Three new maintenance cartridges must be provided. (Two for disposing waste ink and one to be installed during transportation)
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**Transportation procedure**

- 1) If there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace the maintenance cartridge.
- 2) Remove the paper and roll holder.
- 3) From [Main menu] > [Maintenance] > [MOVE PRINTER], select [LEVEL 2] or [LEVEL 3].
- 4) Press the [OK] key and perform [LEVEL 2] or [LEVEL 3] MOVE PRINTER.
- 5) If the counter is checked and a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable part.  
See "d. Replacing consumable parts during transportation."  
Repeat [LEVEL 2] or [LEVEL 3] after replacing consumable parts and resetting the counter.
- 6) Follow the displayed message and open the left and right ink tank covers.

F-3-60

7) Raise the ink tank lock lever and remove all ink tanks.

F-3-61

Put the removed ink tanks in the plastic bag with the ink supply part [1] upward and close the opening.

F-3-62

8) Return the ink tank lock lever and close the ink tank cover.

Ink drainage is performed automatically. Replace the maintenance cartridge when the cartridge replacement message appears.

9) When MOVE PRINTER completed message appears, turn off the power, and remove the power cord and interface cable.

10) Open the upper cover and raise the ejection guide.

F-3-63

11) Remove the ejection support and lower the ejection guide.

F-3-64

12) Install the belt stopper.

F-3-65

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

13) Close the upper cover.

14) Attach the cushioning materials and tape.

15) If a basket is installed, remove the basket.

16) Remove the printer from the stand.

Hold the transporting handles at left and right bottom of the printer with three persons on each side and separate the printer from the stand.

17) Reverse the assembly procedure to disassemble the stand and media take-up unit as necessary and pack them.

18) Pack the printer and transport.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

d. Replacing consumable parts during transportation

During [MOVE PRINTER], if a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable parts.  
See "Service mode."  
The consumable parts to be replaced and counter to be reset depends on the [LEVEL].

No	Part number	Name	Q'ty	Service Mode		Level x (Main menu)		
				PARTS xx	COUNTER x			
[1]	QL2-2110	WASTE INK ABSORBER UNIT	1	A1	A	1, 2, 3		
[2]	QL2-2108	WASTE INK ABSORBER UNIT (L)	2	A3/A4				
[3]	QL2-1650	WASTE INK ABSORBER UNIT (S)	1	A5				
[4]	QM3-3069	SUCTION FAN UNIT	1	A6				
[5]	QL2-1663	DUCT	1		V	2, 3		
[6]	QM3-1038	FAN UNIT	2	V1				
[7]	QM3-1033	INK SUPPLY MOUNT UNIT (L)	1	If there is waste ink, perform waste ink disposal or parts replacement.				
[8]	QM3-1034	INK SUPPLY MOUNT UNIT (R)	1					

When replacing consumable parts, check for leaking waste ink. When replacing each consumable part, be careful of leaking waste ink especially from the marked area [A] and avoid tilting the part when removing.

### 3.2.1.2 Transporting the Printer

iPF8000

When transporting the printer, the printhead must be capped and stay in the carriage.

In spite of this precaution, shocks incurred during transportation can damage the printhead.

Print the nozzle check pattern before making preparations for transporting the printer, print the nozzle check pattern again after installing the printer at the new location, and then compare the two printouts.

If any problem such as nozzle clogging cannot be resolved by printhead cleaning, replace the printhead with a new one.

This section describes how to transport the printer.

The procedure depends on the mode of transportation. Select the appropriate transportation level from the following transportation modes.

#### 1. Transportation mode

- Moving the printer on the same floor with no difference in grade (without tilting the printer): LEVEL 0
- Moving the printer on floor where there is difference in grade or by truck (by tilting the printer): LEVEL 1
- Moving the printer by plane or ship (tilting direction of printer is unpredictable): LEVEL 2
- Moving the printer in low temperature environment such as sub zero: LEVEL 2
- Moving the printer on its end: LEVEL 3

When lifting or moving the printer, be sure to hold the handle at bottom left and right of the printer. Holding the printer by its cover can deform the cover.

F-3-72

F-3-73

The printer main unit weights approximately 110 kg. When moving the printer, have at least six people hold it from both sides taking care not to hurt their back.

F-3-74

Do not place or transport the printer with load placed only at the center of the printer. Otherwise the printer can be deformed or damaged.

F-3-75

When tilting the printer, place a cardboard or blanket on the floor to prevent damage to the printer.

F-3-76

When tilting the printer, support the printer at bottom left and right side of the printer.  
If the printer is supported at any other location, the printer may be damaged or deformed.

F-3-77

**a. LEVEL 0**

Moving the printer on the same floor without difference in grade

T-3-15

Item	Description
[MOVE PRINTER] on the Main menu	This need not be performed.
Allowed tilting angle	Do not tilt.
Ink consumption	No ink is consumed.
Ink tank	It may be installed or removed.
Separation of main unit and stand	They do not need to be separated.
Maintenance cartridge	Install. There is no need to open a new maintenance cartridge.
Replacement of consumable parts	There is no need to replace consumable parts.
Service support	No service support is necessary.

**Transportation procedure**

- 1) Turn off the power and check that the heads are capped.
- 2) Open the upper cover and mount the belt stopper.

F-3-78

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

- 3) Close the upper cover.
- 4) Remove the paper and roll holder.
- 5) Remove power cord and interface cable.
- 6) Unlock the casters on the stand and move the printer slowly.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

**b. LEVEL 1**

Moving the printer on a floor with difference in grade or by truck

T-3-16

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 1].
Allowed tilting angle	Lengthwise: -30 to +30 degrees  Rotation: -10 to +10 degrees 
Ink consumption	No ink is consumed.
Ink tank	It may be installed or removed.
Separation of main unit and stand	They do not need to be separated.
Maintenance cartridge	Install. There is no need to open a new maintenance cartridge. However, if there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace with new maintenance cartridge before transporting.
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**Transportation procedure**

- 1) If there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace the maintenance cartridge.
- 2) Remove the paper and roll holder.
- 3) From [Main menu] > [Maintenance] > [MOVE PRINTER], select [LEVEL 1].
- 4) Press the [OK] key and perform [LEVEL 1] MOVE PRINTER.
- 5) If the consumable parts counter is checked and a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable part.  
See "d. Replacing consumable parts during transportation."
- Repeat [LEVEL 1] after replacing consumable parts and resetting the counter.
- 6) When MOVE PRINTER completed message appears, turn off the power, and remove the power cord and interface cable.
- 7) Open the upper cover and raise the ejection guide.

F-3-79

8) Remove the ejection support and lower the ejection guide.

F-3-80

9) Install the belt stopper.

F-3-81

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

- 10) Close the upper cover.
- 11) Attach the cushioning materials and tape.
- 12) Unlock the casters on the stand and move the printer slowly.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

**c-1. LEVEL 2**

Transporting by plane or ship

Transporting in low temperature environment such as sub zero

T-3-17

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 2].
Allowed tilting angle	Lengthwise: -30 to +30 degrees
	
	Rotation: -30 to +30 degrees
	
Ink consumption	Approximately 600ml of ink is consumed.
Ink tank	Remove all ink tanks.
Separation of main unit and stand	Separate.
Maintenance cartridge	Install. Have one new maintenance cartridge ready.
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**c-2. LEVEL 3**

Moving the printer on its end

T-3-18

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 3].
Allowed tilting angle	Lengthwise: -90 to +90 degrees
	
	Rotation: -10 to +10 degrees
	
Ink consumption	Approximately 1900ml of ink is consumed.
Ink tank	Remove all ink tanks.
Separation of main unit and stand	Separate.
Maintenance cartridge	Replace with new maintenance cartridge before performing transporting procedure. Three new maintenance cartridges must be provided. (Two for disposing waste ink and one to be installed during transportation)
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**Transportation procedure**

- 1) If there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace the maintenance cartridge.
- 2) Remove the paper and roll holder.
- 3) From [Main menu] > [Maintenance] > [MOVE PRINTER], select [LEVEL 2] or [LEVEL 3].
- 4) Press the [OK] key and perform [LEVEL 2] or [LEVEL 3] MOVE PRINTER.
- 5) If the counter is checked and a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable part.  
See "d. Replacing consumable parts during transportation."  
Repeat [LEVEL 2] or [LEVEL 3] after replacing consumable parts and resetting the counter.
- 6) Follow the displayed message and open the left and right ink tank covers.

F-3-82

7) Raise the ink tank lock lever and remove all ink tanks.

F-3-83

Put the removed ink tanks in the plastic bag with the ink supply part [1] upward and close the opening.

F-3-84

8) Return the ink tank lock lever and close the ink tank cover.

Ink drainage is performed automatically. Replace the maintenance cartridge when the cartridge replacement message appears.

9) When MOVE PRINTER completed message appears, turn off the power, and remove the power cord and interface cable.

10) Open the upper cover and raise the ejection guide.

F-3-85

- 11) Remove the ejection support and lower the ejection guide.

F-3-86

- 12) Install the belt stopper.

F-3-87

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

- 13) Close the upper cover.  
14) Attach the cushioning materials and tape.  
15) If a basket is installed, remove the basket.  
16) Remove the printer from the stand.  
Hold the transporting handles at left and right bottom of the printer with three persons on each side and separate the printer from the stand.  
17) Reverse the assembly procedure to disassemble the stand and media take-up unit as necessary and pack them.  
18) Pack the printer and transport.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

**d. Replacing consumable parts during transportation**

During [MOVE PRINTER], if a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable parts.

See "Service mode."

The consumable parts to be replaced and counter to be reset depends on the [LEVEL].

No	Part number	Name	Q'ty	Service Mode		Level x (Main menu)
				PARTS xx	COUNTER x	
[1]	QL2-2110	WASTE INK ABSORBER UNIT	1	A1	A	1, 2, 3

### 3.2.1.3 Transporting the Printer

iPF8000S

When transporting the printer, the printhead must be capped and stay in the carriage. In spite of this precaution, shocks incurred during transportation can damage the printhead. Print the nozzle check pattern before making preparations for transporting the printer, print the nozzle check pattern again after installing the printer at the new location, and then compare the two printouts. If any problem such as nozzle clogging cannot be resolved by printhead cleaning, replace the printhead with a new one.

This section describes how to transport the printer. The procedure depends on the mode of transportation. Select the appropriate transportation level from the following transportation modes.

#### 1. Transportation mode

- Moving the printer on the same floor with no difference in grade (without tilting the printer): LEVEL 0
- Moving the printer on floor where there is difference in grade or by truck (by tilting the printer): LEVEL 1
- Moving the printer by plane or ship (tilting direction of printer is unpredictable): LEVEL 2
- Moving the printer in low temperature environment such as sub zero: LEVEL 2
- Moving the printer on its end: LEVEL 3

When lifting or moving the printer, be sure to hold the handle at bottom left and right of the printer. Holding the printer by its cover can deform the cover.

F-3-94

F-3-95

The printer main unit weighs approximately 110 kg. When moving the printer, have at least six people hold it from both sides taking care not to hurt their back.

F-3-96

Do not place or transport the printer with load placed only at the center of the printer. Otherwise the printer can be deformed or damaged.

F-3-97

When tilting the printer, place a cardboard or blanket on the floor to prevent damage to the printer.

F-3-98

When tilting the printer, support the printer at bottom left and right side of the printer.  
If the printer is supported at any other location, the printer may be damaged or deformed.

F-3-99

**a. LEVEL 0**

Moving the printer on the same floor without difference in grade

T-3-20

Item	Description
[MOVE PRINTER] on the Main menu	This need not be performed.
Allowed tilting angle	Do not tilt.
Ink consumption	No ink is consumed.
Ink tank	It may be installed or removed.
Separation of main unit and stand	They do not need to be separated.
Maintenance cartridge	Install. There is no need to open a new maintenance cartridge.
Replacement of consumable parts	There is no need to replace consumable parts.
Service support	No service support is necessary.

**Transportation procedure**

- 1) Turn off the power and check that the heads are capped.
- 2) Open the upper cover and mount the belt stopper.

F-3-100

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

- 3) Close the upper cover.
- 4) Remove the paper and roll holder.
- 5) Remove power cord and interface cable.
- 6) Unlock the casters on the stand and move the printer slowly.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

**b. LEVEL 1**

Moving the printer on a floor with difference in grade or by truck

T-3-21

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 1].
Allowed tilting angle	Lengthwise: -30 to +30 degrees 
	Rotation: -10 to +10 degrees 
Ink consumption	No ink is consumed.
Ink tank	It may be installed or removed.
Separation of main unit and stand	They do not need to be separated.
Maintenance cartridge	Install. There is no need to open a new maintenance cartridge. However, if there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace with new maintenance cartridge before transporting.
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**Transportation procedure**

- 1) If there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace the maintenance cartridge.
- 2) Remove the paper and roll holder.
- 3) From [Main menu] > [Maintenance] > [MOVE PRINTER], select [LEVEL 1].
- 4) Press the [OK] key and perform [LEVEL 1] MOVE PRINTER.
- 5) If the consumable parts counter is checked and a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable part.  
See "d. Replacing consumable parts during transportation."
- Repeat [LEVEL 1] after replacing consumable parts and resetting the counter.
- 6) When MOVE PRINTER completed message appears, turn off the power, and remove the power cord and interface cable.
- 7) Open the upper cover and raise the ejection guide.

F-3-101

8) Remove the ejection support and lower the ejection guide.

F-3-102

9) Install the belt stopper.

F-3-103

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

10) Close the upper cover.

11) Attach the cushioning materials and tape.

12) Unlock the casters on the stand and move the printer slowly.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

**c-1. LEVEL 2**

Transporting by plane or ship

Transporting in low temperature environment such as sub zero

T-3-22

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 2].
Allowed tilting angle	Lengthwise: -30 to +30 degrees
	
	Rotation: -30 to +30 degrees
	
Ink consumption	Approximately 396ml of ink is consumed.
Ink tank	Remove all ink tanks.
Separation of main unit and stand	Separate.
Maintenance cartridge	Install. Have one new maintenance cartridge ready.
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**c-2. LEVEL 3**

Moving the printer on its end

T-3-23

Item	Description
[MOVE PRINTER] on the Main menu	Perform [LEVEL 3].
Allowed tilting angle	Lengthwise: -90 to +90 degrees
	
	Rotation: -30 to +30 degrees
	
Ink consumption	Approximately 1176ml of ink is consumed.
Ink tank	Remove all ink tanks.
Separation of main unit and stand	Separate.
Maintenance cartridge	Replace with new maintenance cartridge before performing transporting procedure. Three new maintenance cartridges must be provided. (Two for disposing waste ink and one to be installed during transportation)
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**Transportation procedure**

- 1) If there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace the maintenance cartridge.
- 2) Remove the paper and roll holder.
- 3) From [Main menu] > [Maintenance] > [MOVE PRINTER], select [LEVEL 2] or [LEVEL 3].
- 4) Press the [OK] key and perform [LEVEL 2] or [LEVEL 3] MOVE PRINTER.
- 5) If the counter is checked and a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable part.  
See "d. Replacing consumable parts during transportation."
- Repeat [LEVEL 2] or [LEVEL 3] after replacing consumable parts and resetting the counter.
- 6) Follow the displayed message and open the left and right ink tank covers.

F-3-104

7) Raise the ink tank lock lever and remove all ink tanks.

F-3-105

Put the removed ink tanks in the plastic bag with the ink supply part [1] upward and close the opening.

F-3-106

8) Return the ink tank lock lever and close the ink tank cover.

Ink drainage is performed automatically. Replace the maintenance cartridge when the cartridge replacement message appears.

9) When MOVE PRINTER completed message appears, turn off the power, and remove the power cord and interface cable.

10) Open the upper cover and raise the ejection guide.

F-3-107

11) Remove the ejection support and lower the ejection guide.

F-3-108

12) Install the belt stopper.

F-3-109

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

13) Close the upper cover.

14) Attach the cushioning materials and tape.

15) If a basket is installed, remove the basket.

16) Remove the printer from the stand.

Hold the transporting handles at left and right bottom of the printer with three persons on each side and separate the printer from the stand.

17) Reverse the assembly procedure to disassemble the stand and media take-up unit as necessary and pack them.

18) Pack the printer and transport.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

d. Replacing consumable parts during transportation

During [MOVE PRINTER], if a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable parts.  
See "Service mode."  
The consumable parts to be replaced and counter to be reset depends on the [LEVEL].

[Prep. MovePrinter] on the Main menu	Perform [LEVEL 3].
Allowed tilting angle	Lengthwise: -90 to +90 degrees
	
	Rotation: -30 to +30 degrees
	
Ink consumption	Approximately 1176ml of ink is consumed.
Ink tank	Remove all ink tanks.
Separation of main unit and stand	Separate.
Maintenance cartridge	Replace with new maintenance cartridge before performing transporting procedure. Three new maintenance cartridges must be provided. (Two for disposing waste ink and one to be installed during transportation)
Replacement of consumable parts	Replacement of consumable parts and resetting of counter may be necessary.
Service support	If consumable parts must be replaced, service support is necessary.

**Transportation procedure**

- 1) If there is a message instructing to replace the maintenance cartridge or check the remaining ink, replace the maintenance cartridge.
- 2) Remove the paper and roll holder.
- 3) From [Set/Adj. Menu] > [Prep. MovePrinter], select [LEVEL 2] or [LEVEL 3].
- 4) Press the [OK] key and perform [LEVEL 2] or [LEVEL 3] MOVE PRINTER.
- 5) If the counter is checked and a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable part.  
See "d. Replacing consumable parts during transportation."  
Repeat [LEVEL 2] or [LEVEL 3] after replacing consumable parts and resetting the counter.
- 6) Follow the displayed message and open the left and right ink tank covers.

F-3-148

7) Raise the ink tank lock lever and remove all ink tanks.

F-3-149

Put the removed ink tanks in the plastic bag with the ink supply part [1] upward and close the opening.

F-3-150

8) Return the ink tank lock lever and close the ink tank cover.

Ink drainage is performed automatically. Replace the maintenance cartridge when the cartridge replacement message appears.

9) When MOVE PRINTER completed message appears, turn off the power, and remove the power cord and interface cable.

10) Open the upper cover and raise the ejection guide.

F-3-151

11) Remove the ejection support and lower the ejection guide.

F-3-152

12) Install the belt stopper.

F-3-153

When mounting the belt stopper, be careful not to move the carriage by applying too much pressure. If the carriage moves when the heads are capped, the rubber part of the cap may touch the nozzles on the heads and damage the print head.

13) Close the upper cover.

14) Attach the cushioning materials and tape.

15) If a basket is installed, remove the basket.

16) Remove the printer from the stand.

Hold the transporting handles at left and right bottom of the printer with three persons on each side and separate the printer from the stand.

17) Reverse the assembly procedure to disassemble the stand and media take-up unit as necessary and pack them.

18) Pack the printer and transport.

If the printer is subjected to strong vibrations when it is moved, it can cause ink leakage or damage to the print head. Be sure to move the printer slowly and carefully.

d. Replacing consumable parts during transportation

During [MOVE PRINTER], if a message to replace consumable parts appear, check the consumable parts counter from service mode and replace the necessary consumable parts.  
See "Service mode."  
The consumable parts to be replaced and counter to be reset depends on the [LEVEL].

No	Part number	Name	Q'ty	Service Mode	Level x (Main menu)
				PARTS xx	
[1]	QL2-2110	WASTE INK ABSORBER UNIT	1	Wia-1	1, 2, 3
[2]	QL2-2108	WASTE INK ABSORBER UNIT (L)	2	Wia-3/Wia-4	
[3]	QL2-1650	WASTE INK ABSORBER UNIT (S)	1	Wia-5	
[4]	QM3-3069	SUCTION FAN UNIT	1	Wia-6	
[5]	QL2-1663	DUCT	1	Mi-1	2, 3
[6]	QM3-7025	FAN UNIT	2		
[7]	QM3-1033	INK SUPPLY MOUNT UNIT (L)	1	If there is waste ink, perform waste ink disposal or parts replacement.	
[8]	QM3-1034	INK SUPPLY MOUNT UNIT (R)	1		

When replacing consumable parts, check for leaking waste ink. When replacing each consumable part, be careful of leaking waste ink especially from the marked area [A] and avoid tilting the part when removing.

## **3.2.2 Reinstalling the Printer**

### **3.2.2.1 Reinstalling the Printer**

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### **1. Installing after transporting by LEVEL 0 or LEVEL 1.**

If ink drainage was not performed when transporting by LEVEL 0 or 1, remove the belt stopper and attach the power cord and interface cable after moving the printer to the installation location, and then check the operation of the printer (with test pattern).

#### **2. Installing after transporting by LEVEL 2 or LEVEL 3.**

If ink drainage was performed when transporting by LEVEL 2 or LEVEL 3, follow the installation procedure which is nearly identical to the procedure when installing for the first time.

## 4.1 Service Parts

---

### 4.1.1 Service Parts

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

The service parts indicated below require careful handling.

1. Keep all packages with the warning not to turn over.

Pay careful attention to all individually packaged service part (carriage unit, purge unit, ink tank unit, and other parts) boxes marked "This side up" and handle appropriately.

F-4-1

2. Feed roller

The feed roller is a functionally important part. Therefore, be careful that the roller is not scratched or marked during storage or transport of the service parts, when removing them from the individual boxes, when assembling, or performing any other operations.

4.2 Disassembly/Reassembly

4.2.1 Disassembly/Reassembly

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

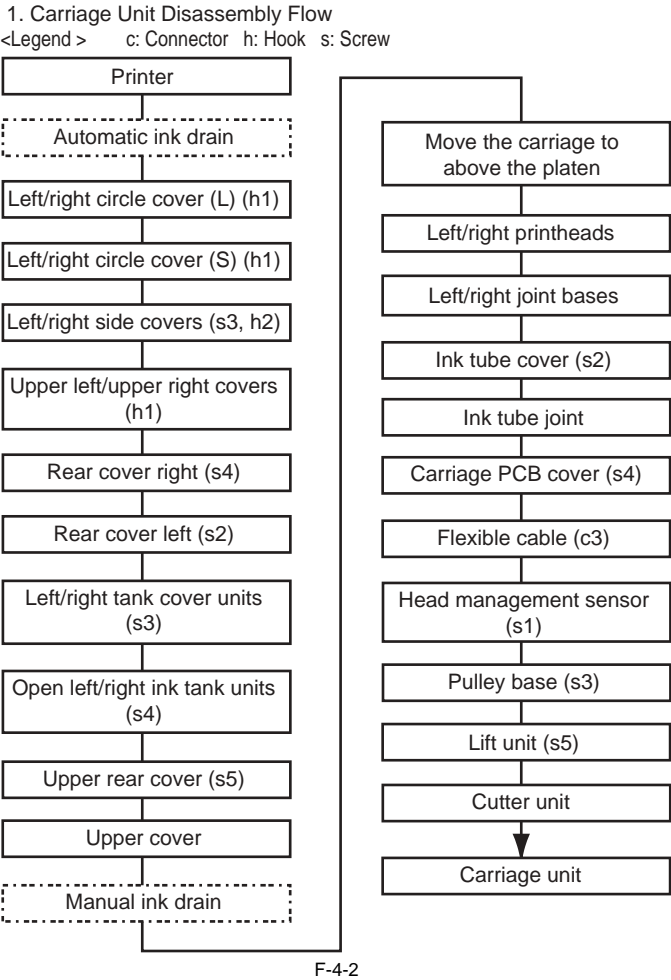

See the Parts Catalog for the disassembly and reassembly procedures. The following four main units do not apply.

- Main Units:  
1. Carriage unit  
2. Ink tube unit  
3. Purge unit  
4. Ink tank unit

The parts layout illustration in the Parts Catalog shows the figure numbers associated with the disassembly procedure for each product.

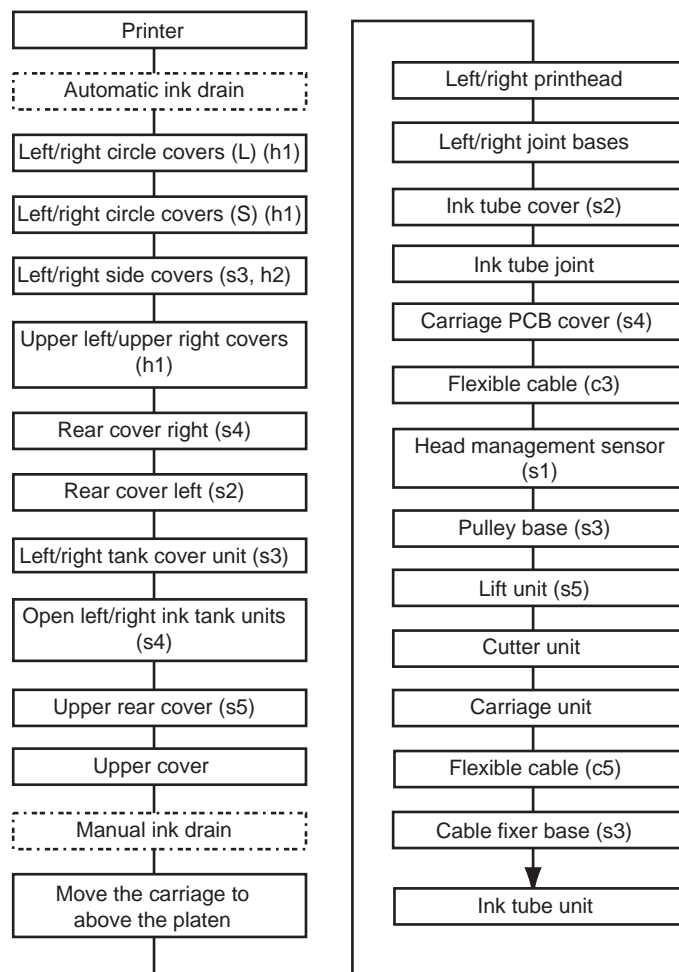

Main unit disassembly and assembly flows

\* Ink drainage in the dotted lines may be performed using either the automatic or manual ink drain procedure.

## 2. Ink Tube Unit Disassembly Flow

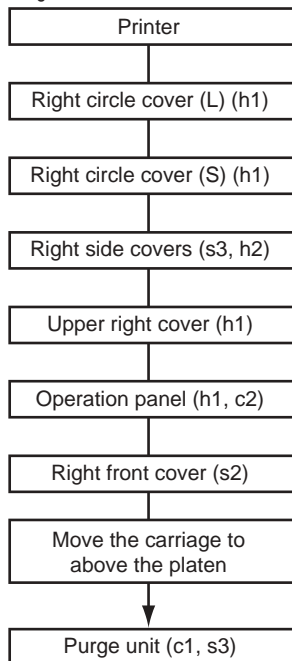

&lt;Legend&gt; c: Connector h: Hook s: Screw

F-4-3

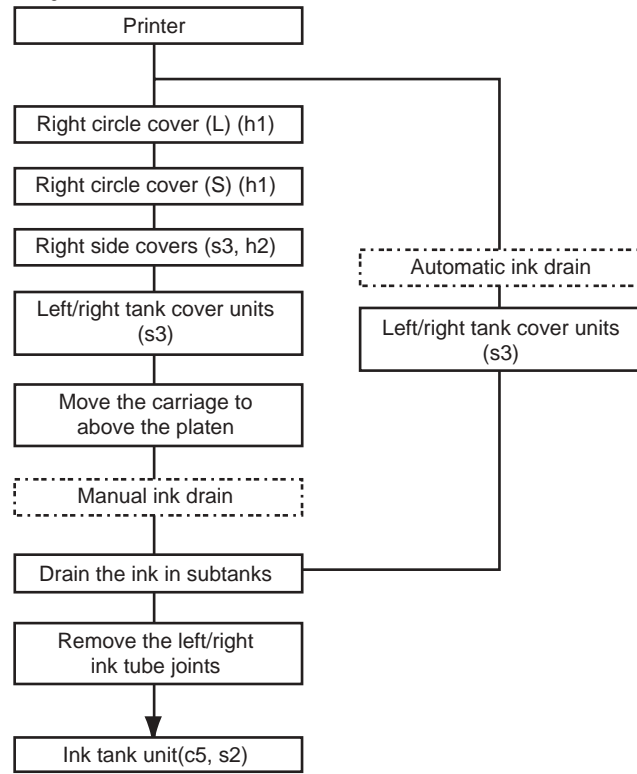

## 3. Purge Unit Disassembly Flow

&lt;Legend&gt; c: Connector h: Hook s: Screw

F-4-4

4. Ink Tank unit Disassembly Flow  
<Legend> c: Connector h: Hook s: Screw

F-4-5

### 4.3 Points to Note on Disassembly and Reassembly

#### 4.3.1 Note: Items that should never be disassembled

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Assemblies that should never be removed after initial factory adjustments, are indicated by the presence of red screws. Under no circumstance should these red screws be loosened or removed. Removing these screws will render the printer out of alignment forever.

F-4-6

#### 4.3.2 Moving the carriage manually

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

When moving the carriage, hold it by the handle [1] shown below.

Move the carriage as required during assembly and disassembly to prevent the carriage from contacting the parts to be removed. You cannot move the carriage when capping has been performed. Refer to **DISASSEMBLY/REASSEMBLY > Points to Notes on Disassembly and Reassembly > Opening the caps and moving the wiper unit to remove the caps, and then move the carriage.**

F-4-7

#### 4.3.3 Units requiring draining of ink

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

When disassembling the following units, drain the ink completely, to prevent ink leakage. For ink drain instructions, refer to **DISASSEMBLY/REASSEMBLY > Points to Notes on Disassembly and Reassembly > Draining the ink.**

[1] Carriage unit

Refer to **DISASSEMBLY/REASSEMBLY > Points to Notes on Disassembly and Reassembly > Carriage unit.**

[2] Ink tube unit

Refer to **DISASSEMBLY/REASSEMBLY > Points to Notes on Disassembly and Reassembly > Ink tube unit.**

[3] Ink tank unit

Refer to **DISASSEMBLY/REASSEMBLY > Points to Notes on Disassembly and Reassembly > Ink tank unit.**

### 4.3.4 External Covers

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Left circle cover (L)/Right circle cover (L)

Removing left circle cover (L)/right circle cover (L)

1) To remove circle cover (L) [1], insert flathead screwdriver [2] at the position indicated to remove claw [3] and turn the cover forward to remove.

F-4-8

Installing left circle cover (L)/right circle cover (L)

1) Install circle cover (L) [1] with its part [2] inserted in arrow mark [3] of the right side cover and turn the cover backward to install.

F-4-9

#### b) Left circle cover (S)/Right circle cover (S)

Removing the left circle cover (S)/right circle cover (S)

1) Remove circle cover (S) [1] by turning it forward to remove the hook.

F-4-10

### Installing left circle cover (S)/right circle cover (S)

1) Install circle cover (S) [1] with its part [2] inserted in part [3] of the right side cover and turn the cover rearward to install.

F-4-11

### c) Left/ right side covers

Removing the left/ right side covers

- 1) To remove left/ right side covers [1], remove left/ right circle cover (L) and left/ right circle cover (S).
- 2) Remove three screws [2] and two hooks [3], and remove the cover by their bottom side.

F-4-12

### d) Operation panel

Removing the operation panel

1) To remove the operation panel [1], remove hook [2] with a flathead screwdriver and remove two connectors [3].

**e) Upper left cover/upper right cover**

Removing the upper left cover/upper right cover

- 1) To remove upper left/upper right cover [1], remove left/ right circle cover (L), left/ right circle cover (S) and left/ right side covers.
- 2) Insert a flathead screwdriver at the indicated position to remove hook [2].

**f) Right front cover**

Removing the right front cover

- 1) To remove right front cover [1], remove right circle cover (L), right circle cover (S), right side covers, upper right cover the operation panel.
- 2) Remove two screws [2].

F-4-15

**g) Rear cover, right/ rear cover, left**

Removing the rear cover, right/ rear cover, left

- 1) To remove rear cover right [1], remove four screws [2].
- 2) To remove rear cover, left [3], remove the rear cover right and two screws [4].

F-4-16

**h) Lower rear cover, right/ left, filter cover**

Removing the lower rear cover, right/ left, filter cover

- 1) To remove lower rear cover, right [1], remove four screws [2].
- 2) To remove lower rear cover, left [3], remove two screws [4].
- 3) To remove filter cover [5], remove screw [6].

F-4-17

**i) Left/ right ink tank cover units**

Removing the left/ right ink tank cover units

- 1) To remove left/ right ink tank cover unit [1], remove three screws [2], open tank cover [3] and remove two hooks [4].

F-4-18

**j) Ink tank units**

Opening the ink tank units

- 1) To open the left/right ink tank units, remove left/ right circle cover (L), left/ right circle cover (S), left/ right side covers, upper left/ right cover and left/ right ink tank cover unit.

- 2) Remove two screws [1].
- 3) Remove screw [2] from the support plate at inner side of the printer.
- 4) Remove screw [4] from the support plate [3] at outer side of the printer, loosen screw [5] and slide the support plate to open the ink tank unit.  
(The following figure is the case of the left ink tank unit.)

F-4-19

The ink tank units will lock themselves when they are opened to the maximum allowable angle.  
Be sure to open the ink tank unit to their maximum allowable angle to prevent them from turning over.

#### k) Upper rear cover

Removing the upper rear cover

- 1) To remove the upper rear cover, remove left/ right circle cover (L), left/ right circle cover (S), left/ right side covers , upper left/upper right cover, rear cover, right/ left , and left/ right ink tank cover units and then open the left/ right ink tanks.
- 2) Remove two screws [1] on front side of the printer and three screws [2] on the rear side, and then remove upper rear cover [3].

F-4-20

Note on installing the upper rear cover

1) Fit three rear-panel screws [1] into screw holes on the right side.

F-4-21

#### l) Upper cover

Removing the upper cover

1) To remove the upper cover, remove left/ right circle covers (L), left/ right circle covers (S), left/ right side covers , upper left/upper right covers, rear cover left/ right , right cover unit and upper rear cover.

2) Remove upper cover [2] while opening left/right arm stays [1] outward one by one.

F-4-22

**m) Release lever****Removing the release lever**

1) To remove release lever [1], remove the purge unit and then remove the release lever. To do so, keep pinch roller [2] pressurized to ease the work of phase alignment during gear installation.

**Reinstalling the release lever**

1) To install the release lever, align the gear of the release lever with mark [3] (phase) in the receiving gear.

F-4-23

### 4.3.5 Drive Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Feed motor

Removing the feed motor

- 1) To remove feed motor [1], loosen four screws [2] and remove timing belt [3] and spring [4].
- 2) Remove four loosened screws [2] to release feed motor [1] and remove the connector.

Reinstalling the feed motor

To reassemble the feed roller drive timing belt [3] into position, set the tension of timing belt [3] by adjusting the pressure of spring [4]. Then, fix feed motor [1].

F-4-24

#### b) Action to take after replacing the feed roller encoder and feed roller

This printer as shipped has the feed roller eccentricity (that is, variations in the rate of paper feed from rotation to rotation) corrected for enhanced media feed accuracy. When the feed roller HP sensor or feed roller encoder and feed roller pertaining to the correction of eccentricity variations has been replaced, therefore, they should require adjustment.

Execute service mode under the following conditions to launch automatic adjustment:

Service mode: SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING

Media type: Glossy photo paper

If adjustment cannot be done properly by selecting "SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING" (auto adjustment), carry out manual adjustment.

Service mode SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING2

Media type: Gloss photo paper

Check the printed pattern and enter values for adjustment.

### 4.3.6 Carriage Unit

iPF8000 / iPF8000S / iPF8100

#### a) Removing the carriage unit

- 1) Drain the ink. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > Draining the ink.
- 2) Turn off the power and move the carriage to above the platen. If the carriage is locked at its home position, insert a Phillips screwdriver from the right side into hole [1] in the shaft of the lifting unit in the purge unit and turn it counterclockwise. This will lower cap [2] and lock pin [3], allowing the carriage to be moved.

F-4-25

- 3) Remove the printheads.
- 4) Release the ink tube from the guide, detach four link levers [1] from the printhead fixer lever, then remove two joint bases [2].

F-4-26

Cover the joints in the ink tube, as with a PVC bag, to keep inks from splashing from them.

F-4-27

5) Remove two screws [1] and ink tube cover [2].

F-4-28

6) Remove four screws [1] and open carriage relay PCB cover [2].

F-4-29

7) Disconnect five flexible cables from the carriage relay PCB.

Never peel off tape [1] that fixes the ink tube when detaching the joints of the ink tube on the upper part of the carriage or when removing the joint base from the carriage.

F-4-30

8) Twist off belt fixer knob [1] to loosen the belt, and remove spring [2], guide [3] and pulley [4].

F-4-31

9) Release carriage belt from the pulley of the carriage motor.

- 10) Remove two screws [1] and pulley base [2].
- 11) Remove screw [3] and the connector [4] to release head management sensor unit [5].
- 12) Remove five screws [6] and lift unit [7].

F-4-32

- 13) Remove the cutter unit, and lay the caterpillar of the ink tube unit on its side, and then remove the carriage from the right side of the printer.

To remove the carriage unit, pull it out of position keeping the carriage unit level with care not to harm the linear scale. Flaws on the linear scale could result in malfunctioning.

**b) Mounting the carriage belt**

To install the carriage belt, put in the point of the belt to the interior of the groove [1], and have all the cogs of carriage belt [3] engaged with belt stopper [2].

F-4-33

**c) Note on replacing the carriage unit and the multi sensor**

When either carriage unit or multi sensor has been replaced, be sure to replace the multi sensor reference plate(QL2-2089-000:MOUNT, SENSOR ADJUSTING) as well.

**d) Action to take after replacing the carriage unit and the multi sensor**

Because the distance between the multi sensor (in the carriage unit) and the nozzles (in each printhead) is varied from one unit to another, the printer has its optical axis corrected and paper gap adjustment sensor gain and sensor calibration adjusted prior to shipment. When the carriage unit or multi sensor has been replaced, they should require adjustment.

Execute service mode under the following conditions to launch automatic adjustment:

## 1) Optical axis correction

- Service mode: SERVICE MODE > ADJUST > PRINT PATTERN > OPTICAL AXIS

Media type: Gloss photo paper

## 2) Paper gap adjustment

- Service mode: SERVICE MODE > ADJUST > GAP CALIB.

### 4.3.7 Carriage Unit

iPF8300 / iPF8300S

#### a) Removing the carriage unit

1) Drain the ink. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > Draining the ink.

2) Turn off the power and move the carriage to above the platen. If the carriage is locked at its home position, insert a Phillips screwdriver from the right side into hole [1] in the shaft of the lifting unit in the purge unit and turn it counterclockwise. This will lower cap [2] and lock pin [3], allowing the carriage to be moved.

F-4-34

3) Remove the printheads.

4) Release the ink tube from the guide, detach four link levers [1] from the printhead fixer lever, then remove two joint bases [2].

F-4-35

Cover the joints in the ink tube, as with a PVC bag, to keep inks from splashing from them.

F-4-36

5) Remove two screws [1] and ink tube cover [2].

F-4-37

6) Remove four screws [1] and open carriage relay PCB cover [2].

F-4-38

7) Disconnect five flexible cables from the carriage relay PCB.

Never peel off tape [1] that fixes the ink tube when detaching the joints of the ink tube on the upper part of the carriage or when removing the joint base from the carriage.

F-4-39

8) Twist off belt fixer knob [1] to loosen the belt, and remove spring [2], guide [3] and pulley [4].

F-4-40

9) Release carriage belt from the pulley of the carriage motor.

- 10) Remove two screws [1] and pulley base [2].  
11) Remove screw [3] and the connector [4] to release head management sensor unit [5].  
12) Remove five screws [6] and lift unit [7].

- 13) Remove the purge unit.  
14) Remove the cutter unit, and lay the caterpillar of the ink tube unit on its side, and then remove the carriage from the right side of the printer.

To remove the carriage unit, pull it out of position keeping the carriage unit level with care not to harm the linear scale. Flaws on the linear scale could result in malfunctioning.

**b) Mounting the carriage belt**

To install the carriage belt, put in the point of the belt to the interior of the groove [1], and have all the cogs of carriage belt [3] engaged with belt stopper [2].

F-4-42

**c) Note on replacing the carriage unit and the multi sensor**

When either carriage unit or multi sensor has been replaced, be sure to replace the multi sensor reference plate(QL2-2089-000:MOUNT, SENSOR ADJUSTING) as well.

**d) Action to take after replacing the carriage unit and the multi sensor**

Because the distance between the multi sensor (in the carriage unit) and the nozzles (in each printhead) is varied from one unit to another, the printer has its optical axis corrected and paper gap adjustment sensor gain and sensor calibration adjusted prior to shipment. When the carriage unit or multi sensor has been replaced, they should require adjustment.

Execute service mode under the following conditions to launch automatic adjustment:

## 1) Optical axis correction

- Service mode: SERVICE MODE > ADJUST > PRINT PATTERN > OPTICAL AXIS

Media type: Gloss photo paper

## 2) Paper gap adjustment

- Service mode: SERVICE MODE > ADJUST > GAP CALIB.

**e) Action following the replacement of the carriage unit, carriage motor, carriage belt or linear encoder sensor**

After the carriage unit or carriage motor or carriage belt or linear encoder sensor have been removed or replaced, execute the following service mode.

- Service mode: SERVICE MODE > ADJUST > CR MOTOR COG

### 4.3.8 Ink Tube Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Removing ink tube unit

- 1) Drain the ink. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > Draining the ink.
- 2) Remove the carriage unit. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > Carriage Unit.
- 3) Disconnect five flexible cables from the main controller PCB.
- 4) Remove the flexible cable leading to the carriage PCB cover from the guide.
- 5) Remove three screws [1] and release ink tube fixer base [2] from the frame.

F-4-43

- 6) Remove joint [1] of the ink tube unit from left and right ink tank unit to remove ink tube unit [2].

F-4-44

Never peel off tape [1] that fixes the ink tube when detaching the joints of the ink tube on the upper part of the carriage or when removing the joint base from the carriage.  
When replacing the ink tube unit, be sure that the tapes [1] are posted to the new ink tube unit.

F-4-45

---

**b) Reassembling ink tube units**

When the ink tube unit has been replaced, turn on the power without mounting the printhead and the ink tanks.  
Then, mount the printhead and ink tanks as directed by message guidance.

After detaching the joint of the ink tube unit, the joint might become easy to come off by the ink that has adhered to it.  
In that case, please wash the joint by alcohol and remove the adhering ink.

F-4-46

### 4.3.9 Feeder Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Handling the feed roller

The feed roller is a functionally important part. Therefore, be sure to note the following points when handling the roller.

- Do not hold the roller with one hand or warp its shape.
- Do not touch the roller surface (coated surface).
- Do not allow the roller to get scratched or marked.
- Hold the roller at two points; location D and one of the locations A, B, or C as shown in the figure below.

F-4-47

#### b) Action to take after replacing the feed roller encoder and feed roller

This printer as shipped has the feed roller eccentricity (that is, variations in the rate of paper feed from rotation to rotation) corrected for enhanced media feed accuracy. When the feed roller HP sensor or feed roller encoder and feed roller pertaining to the correction of eccentricity variations has been replaced, therefore, they should require adjustment.

Execute service mode under the following conditions to launch automatic adjustment:

Service mode: SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING

Media type: Glossy photo paper

If adjustment cannot be done properly by selecting "SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING" (auto adjustment), carry out manual adjustment.

Service mode SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING2

Media type: Gloss photo paper

Check the printed pattern and enter values for adjustment.

### 4.3.10 Purge Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Removing the purge unit

1) Turn off the power and move the carriage to above the platen. If the carriage is locked at its home position, insert a Phillips screwdriver from the right side into hole [1] in the shaft of the lift unit in the purge unit and turn it counterclockwise. This will lower cap [2] and lock pin [3], allowing the carriage to be moved.

F-4-48

2) Remove connector [1] and three screws [2] and then remove purge unit [3].

F-4-49

### 4.3.11 Ink Tank Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Removing ink tank units

- 1) Drain the ink. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > Draining the ink.
- 2) Detach the joint between the ink tube unit and ink tank unit [1].
- 3) Remove four screws [2] and five connectors [3] and then remove the ink tank unit.

F-4-50

After detaching the joint between the ink tube unit and the ink tube of the ink tank unit, the joint might become easy to come off by the ink that has adhered to it. In that case, please wash the joint by alcohol and remove the adhering ink.

F-4-51

**b) Reinstalling ink tank units**

The left and right ink tank units are installed to different positions at waste ink tray [1].  
Install the right ink tank unit at screw position [2].  
Install the left ink tank unit at screw position [3].  
(Installing position of each ink tank units are inner side of the printer.)

F-4-52

**c) Removing the valve motor unit**

- 1) To remove the valve motor unit, remove the ink tank cover unit.
- 2) Remove three screws [1], two connectors [2] and bearing [3], and then remove valve motor unit [4].

F-4-53

### 4.3.12 Linear Encoder

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Removing the linear encoder

- 1) Move the carriage to above the platen.
- 2) Remove two screws [1] and upper rear stay [2].

- 3) Remove two screws [1] and linear encoder [2].

### 4.3.13 Head Management Sensor

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Removing the head management sensor

1) To remove head management sensor [1], remove screw [2] and disconnect connector [3].

F-4-56

#### b) Action to take after replacing the head management sensor

Because the distance between the head management sensor and the carriage unit is varied from one unit to another, the printer has its optical axis corrected to adjust the non-discharging nozzle detection position prior to shipment. When the head management sensor carriage unit has been replaced, it should require adjustment.

Execute service mode under the following conditions:

SERVICE MODE > ADJUST > NOZZLE CHK POS.

#### 4.3.14 PCBs

iPF8000 / iPF8000S / iPF8100

Do not replace the main controller PCB and the maintenance cartridge relay PCB (ROM board) at the same time.

Both PCBs hold vital information, such as settings and a carriage drive time. Before either PCB is replaced, such information is temporarily saved through internal communication with the other PCB and is automatically written to the new PCB when it is installed. For this reason, the two PCBs cannot be replaced at the same time. To replace both PCBs, work in order of (a) > (b).

When the main controller PCB and maintenance cartridge relay PCB have been replaced with service parts, check that the latest version of firmware is installed in them.

If not, upgrade the firmware to the latest version.

##### a) Replacing the maintenance cartridge relay PCB (ROM board)

- 1) Turn off the power and disconnect the power plug.
- 2) Replace the maintenance cartridge relay PCB.
- 3) Reconnect the power plug and turn on the power while pressing the [Paper Source] and [Information] keys. (Start the printer in PCB replacement mode.)
- 4) Release the key, but not before making sure that "Initializing" appears on the display. (The message lamp lights when printer enters PCB replacement mode.)
- 5) Wait until "REPLACE MODE" appears on the display.
- 6) Select MC BOARD and press the [OK] key.
- 7) Turn off the power, but not before making sure that "Power off" appears on the display.
- 8) Turn on the power.
- 9) Check the firmware version. If the firmware is not the latest version, upgrade the firmware to the latest version.

##### b) Replacing the main controller PCB

- 1) Turn off the power and disconnect the power plug.
- 2) Replace the main controller PCB.
- 3) Reconnect the power plug and turn on the power while pressing the [Paper Source] and [Information] keys. (Start the printer in PCB replacement mode.)
- 4) Release the key, but not before making sure that "Initializing" appears on the display. (The message lamp lights when printer enters PCB replacement mode.)
- 5) Wait until "REPLACE MODE" appears on the display.
- 6) Select CPU BOARD and press the [OK] key.
- 7) Turn off the power, but not before making sure that "Power off" appears on the display.
- 8) Turn on the power.
- 9) Check the firmware version. If the firmware is not the latest version, upgrade the firmware to the latest version.

### 4.3.15 PCBs

iPF8300 / iPF8300S

Do not replace the main controller PCB and the maintenance cartridge relay PCB (ROM board) at the same time.

Both PCBs hold vital information, such as settings and a carriage drive time. Before either PCB is replaced, such information is temporarily saved through internal communication with the other PCB and is automatically written to the new PCB when it is installed. For this reason, the two PCBs cannot be replaced at the same time. To replace both PCBs, work in order of (a) > (b).

When the main controller PCB and maintenance cartridge relay PCB have been replaced with service parts, check that the latest version of firmware is installed in them.

If not, upgrade the firmware to the latest version.

#### a) Replacing the maintenance cartridge relay PCB (ROM board)

- 1) Turn off the power and disconnect the power plug.
- 2) Replace the maintenance cartridge relay PCB.
- 3) Reconnect the power plug and turn on the power while pressing the [Load] and [Navigate] keys. (Start the printer in PCB replacement mode.)
- 4) Release the key, but not before making sure that "Initializing" appears on the display. (The message lamp lights when printer enters PCB replacement mode.)
- 5) Wait until "REPLACE MODE" appears on the display.
- 6) Select MC BOARD and press the [OK] key.
- 7) Turn off the power, but not before making sure that "Power off" appears on the display.
- 8) Turn on the power.
- 9) Check the firmware version. If the firmware is not the latest version, upgrade the firmware to the latest version.

#### b) Replacing the main controller PCB

- 1) Turn off the power and disconnect the power plug.
- 2) Replace the main controller PCB.
- 3) Reconnect the power plug and turn on the power while pressing the [Load] and [Navigate] keys. (Start the printer in PCB replacement mode.)
- 4) Release the key, but not before making sure that "Initializing" appears on the display. (The message lamp lights when printer enters PCB replacement mode.)
- 5) Wait until "REPLACE MODE" appears on the display.
- 6) Select CPU BOARD and press the [OK] key.
- 7) Turn off the power, but not before making sure that "Power off" appears on the display.
- 8) Turn on the power.
- 9) Check the firmware version. If the firmware is not the latest version, upgrade the firmware to the latest version.

### 4.3.16 Opening the Cap and moving the Wiper Unit

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

This section explains how to uncap the carriage and ink supply valves manually.

Moving carriage when the power of the printer is off, releasing carriage lock pin and uncapping must be done manually.

#### 1. Uncapping, releasing the carriage lock pin and moving the wiper unit

1) Remove right circle cover (L), right circle cover (S), right side covers and upper right cover.

2) Insert a Phillips screwdriver from the right side into hole [1] in the shaft of the lift unit in the purge unit and turn it counterclockwise. This will lower cap [2] and lock pin [3], allowing the carriage to be moved.

The wiper unit will move in sync with the motion of the cap and lock pin.

F-4-57

### 4.3.17 Draining the ink

iPF8000 / iPF8000S / iPF8100

There are two ways to drain the ink passage of inks: automatic and manual.

Be sure to drain the ink from the ink passage to prevent ink leakage before disassembling any component of the ink passage or reshipping the printer.

#### 1. Automatic Ink Drain

Execute Automatic Ink Drain by selecting Maintenance > Move Printer from the main menu.

Execute Automatic Ink Drain once again if the printer shuts down due to a power failure or any other trouble before the operation completes.

#### 2. Manual Ink Drain

Drain the ink passage of inks manually if any electrical component in the printer fails or firmware malfunctions or if the printer fails to be powered on.

- 1) Remove right circle cover (L), right circle cover (S), right side covers, left/ right the ink tank cover units. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > External Covers.
- 2) Remove the ink tanks.
- 3) Move the carriage to above the platen. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > Opening the caps and moving the wiper unit.
- 4) Release the printhead fixer lever.
- 5) Open the ink supply valves to allow the inks to flow into the sub tanks.

#### 3. Draining the ink in sub tanks

- 1) Remove ink discharge tube [1] behind each sub tank and move the ink from the sub tank into a container. Repeat this procedure for each additional sub tank.

F-4-58

### 4.3.18 Opening and closing ink supply valves

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

#### a) Opening and closing ink supply valves

- 1) Remove the ink tank cover unit.
- 2) Press valve lever [1] with a finger to open the ink supply valve.

F-4-59

- If the printhead fixer lever is released with the ink supply valve to an ink tube open while the tube is filled with an ink, the ink in the tube could flow backward to the ink tank unit, leaking through the hollow needle in the ink tank.
- If an ink supply valve remains open, as on occurrence of an ink supply valve open/close error, remove the valve motor unit and (see Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > Ink Tank Units) and close the ink supply valve.

### 4.3.19 Draining the ink

iPF8300 / iPF8300S

There are two ways to drain the ink passage of inks: automatic and manual.

Be sure to drain the ink from the ink passage to prevent ink leakage before disassembling any component of the ink passage or reshipping the printer.

#### 1. Automatic Ink Drain

Execute Automatic Ink Drain by selecting [Set/Adj. Menu] > [Prep.MovePrinter] from the main menu.

Execute Automatic Ink Drain once again if the printer shuts down due to a power failure or any other trouble before the operation completes.

#### 2. Manual Ink Drain

Drain the ink passage of inks manually if any electrical component in the printer fails or firmware malfunctions or if the printer fails to be powered on.

- 1) Remove right circle cover (L), right circle cover (S), right side covers, left/ right the ink tank cover units. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > External Covers.
- 2) Remove the ink tanks.
- 3) Move the carriage to above the platen. See Disassembly/Reassembly > Points to Note on Disassembly/Reassembly > Opening the caps and moving the wiper unit.
- 4) Release the printhead fixer lever.
- 5) Open the ink supply valves to allow the inks to flow into the sub tanks.

#### 3. Draining the ink in sub tanks

- 1) Remove ink discharge tube [1] behind each sub tank and move the ink from the sub tank into a container. Repeat this procedure for each additional sub tank.

F-4-60

4.4 Applying the Grease

4.4.1 Applying the Grease

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Apply the grease at the location shown below.  
Smear the grease lightly and evenly with a flat brush.

**⚠** Don't apply the grease to locations other than those designated. Unwanted grease may cause poor print quality, take particular care that grease does not get onto the wiper, cap, or the linear scale.

T-4-1

No.	Place	Kind	Quantity	Note
1	The joint base rail and rib of carriage unit	Molykote PG-641	Smear the grease lightly	
2	Two feed roller backup	Permalub G No.2	approx.12mg	Don't apply to central backup with bearing.
	Bushing	Permalub G No.2	Smear the grease lightly	
3	Feed roller bearing	Permalub G No.2	approx.24mg	Apply if remove bearing from a feed roller.
4	Pinch roller release cam three points x 10 parts	Permalub G No.2	Smear the grease lightly	
5	Upper cover stay shaft hole	Permalub G No.2	approx.24mg	
	The gear shaft of the upper cover stay gear	Permalub G No.2	approx.24mg	
	Upper cover stay shaft end	Permalub G No.2	approx.24mg	
	The gear tooth face of upper cover stay	Permalub G No.2	Smear the grease lightly	

1. The joint base rail [1] and the rib [2] of the carriage unit.

F-4-61

- 2. Two feed roller backup [1]/ bushing [2]
- 3. Feed roller bearing [3]

F-4-62

- 4. Pinch roller release cam [1] three points x 10 parts

F-4-63

## 4.5 Adjustment and Setup Items

### 4.5.1 Adjustment Item List

iPF8000 / iPF8000S / iPF8100

The following adjustment procedures need to be performed when parts have been replaced or remove and then reinstalled:

T-4-2

Adjustment item	Adjustment timing
Multi sensor recalibration	Multi sensor replacement/removal
	Carriage unit replacement/removal
Adjusting feed roller eccentricity	Feed roller
	Feed roller encoder
Head management sensor recalibration	Head management sensor replacement/removal
	Carriage unit replacement/removal

### 4.5.2 Adjustment Item List

iPF8300 / iPF8300S

The following adjustment procedures need to be performed when parts have been replaced or remove and then reinstalled:

T-4-3

Adjustment item	Adjustment timing
Multi sensor recalibration	Multi sensor replacement/removal
	Carriage unit replacement/removal
Adjusting feed roller eccentricity	Feed roller
	Feed roller encoder
Head management sensor recalibration	Head management sensor replacement/removal
	Carriage unit replacement/removal
Carriage motor recalibration	Carriage unit replacement/removal
	Carriage motor replacement/removal
	Carriage belt replacement/removal

### 4.5.3 Procedure after Replacing the Carriage Unit or Multi Sensor

iPF8000 / iPF8000S / iPF8100

#### a) Note on replacing the carriage unit and the multi sensor

The multi sensor reference plate(QL2-2089-000:MOUNT, SENSOR ADJUSTING) must be replaced at the same time whenever the carriage or the multi sensor is being replaced.

#### b) Multi Sensor Recalibration

Because the distance between the multi sensor (in the carriage unit) and the nozzles (in each printhead) is varied from one unit to another, the printer has its optical axis corrected and paper gap adjustment sensor gain and calibration adjusted prior to shipment. When the carriage unit or multi sensor has been replaced, they should require adjustment.

Execute service mode under the following conditions to launch automatic adjustment:

#### 1) Optical axis correction

- Service mode: SERVICE MODE > ADJUST > PRINT PATTERN > OPTICAL AXIS

Media type: Gloss photo paper

#### 2) Paper gap adjustment

- Service mode: SERVICE MODE > ADJUST > GAP CALIB.

### 4.5.4 Procedure after Replacing the Carriage Unit or Multi Sensor

iPF8300 / iPF8300S

#### a) Note on replacing the carriage unit and the multi sensor

The multi sensor reference plate(QL2-3279-000: MOUNT, SENSOR ADJUSTING) must be replaced at the same time whenever the carriage or the multi sensor is being replaced.

#### b) Multi Sensor Recalibration

Because the distance between the multi sensor (in the carriage unit) and the nozzles (in each printhead) is varied from one unit to another, the printer has its optical axis corrected and paper gap adjustment sensor gain and calibration adjusted prior to shipment. When the carriage unit or multi sensor has been replaced, they should require adjustment.

Execute service mode under the following conditions to launch automatic adjustment:

#### 1) Optical axis correction

- Service mode : SERVICE MODE > ADJUST > PRINT PATTERN > OPTICAL AXIS

Media type : Photo glossy paper

Media size : Media having a width equal to or larger than that of A2-size paper

#### 2) Paper gap adjustment

- Service mode: SERVICE MODE > ADJUST > GAP CALIB.

**c) Carriage Motor Adjustment**

- After the carriage and carriage motor and carriage belt and linear encoder sensor has been removed or replaced, execute the following service mode.

Service mode: SERVICE MODE > ADJUST > CR MOTOR COG

**4.5.5 Procedure after Replacing the Feed Roller or Feed Roller Encoder**

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Feed roller eccentricity is factory-adjusted (correction of variation in the paper feed amount per rotation). It is necessary to adjust feed roller eccentricity after replacing the feed roller encoder or feed roller.

In the service mode, perform automatic adjustment of feed roller eccentricity.

Service mode : SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING

Media type : Photo glossy paper

If adjustment cannot be done properly by selecting "SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING" (auto adjustment), carry out manual adjustment.

Service mode SERVICE MODE > ADJUST > PRINT PATTERN > LF TUNING2

Media type: Gloss photo paper

Check the printed pattern and enter values for adjustment.

**4.5.6 Procedure after Replacing the Head Management Sensor**

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

Since the distance between the head management sensor and the carriage unit varies among printers, the optical axis is factory-adjusted to adjust the non-discharging detection position. When you have replaced the head management sensor or performed assembly/reassembly of surrounding parts that can change the distance between the head management sensor and the carriage unit, readjustment is required. Perform the readjustment in the service mode.

Service mode : SERVICE MODE > ADJUST > NOZZLE CHK POS.

	FAN UNIT	QM3-7025-000	2	25000	Mi-1	OK/W1/E146-4001
User	See "Product Overview> Features> Consumables"					

After supplies have been replaced, execute [INITIALIZE] > [PARTS COUNTER] > [PARTS xx] in service mode to initialize (clear) the parts counter information.

5.3 Periodic Maintenance

5.3.1 Periodic Maintenance

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

T-5-7

Level	Periodic maintenance
User	Cleaning of ink mist and other substances(about once each month)
Service personnel	None

a) **Printer cleaning**  
To keep up with print quality and prevent troubles, clean the printer about once each month.

1) Using a damp cloth that you have wrung out completely, wipe away any dirt or paper dust from the Paper Feed Slot [1], power cord plug, and so on. Dry these parts with a dry cloth.

F-5-1

2) Open the Top Cover.  
3) If paper dust has accumulated in the Vacuum holes on the Platen [1], the Borderless Printing Ink Grooves [2], or cutter guide [3], use the included Cleaning Brush [4] to wipe it away.

F-5-2

**MEMO:**  
If the Cleaning Brush is dirty, rinse it in water.

4) Using a damp cloth that you have wrung out completely, wipe inside the Top Cover to clean it. Wipe away any ink residue on the Top Cover Roller [1], all over the Platen [2], the Pinch Roller Unit [3], the Borderless Printing Ink Grooves [4], the Ejection Guide [5], the cutter guide [6], the maintenance-jet tray [7], and so on.

F-5-3

- Do not dry the interiors of the top cover with a dry cloth. Electrostatic charges could make the internal components susceptible to dirt, resulting in degraded print quality.
- Do not use flammable solvents, such as thinner and benzine, on the printer. Solvents coming into contact with any electrical parts inside the printer could result in fires or electrical shock hazards.
- Do not touch linear scale [1] and carriage shaft [2].

F-5-4

---

## 6.1 Troubleshooting

### 6.1.1 Outline

#### 6.1.1.1 Outline of Troubleshooting

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

##### 1. Outline

Troubles subject to troubleshooting are classified into those shown on the display (warning, error, and service call) and those not shown on the display.

The code of warning and error is shown by combining alphanumeric characters of eight digits and four digits.

The code of service call error is shown by the initial character of "E" and combining alphanumeric characters of three digits and four digits.

No code number is displayed when a warning occurs. Selecting [SERVICE MODE] > [DISPLAY] > [WARNING] allows you to check the warning log.

##### 2. Precautions for Troubleshooting

- 1) Check the environmental conditions and the media used for printing.
  - 2) Before performing troubleshooting, make sure that all connectors and cables are connected properly.
  - 3) When servicing the printer with the external cover removed and the AC power supplied, be extremely careful to avoid electric shock and shorting electrical devices.
  - 4) In the following sections, the troubleshooting steps are described such that the component related to the most probable cause of the problem will be repaired or replaced first, being followed by components with less problem probability. If multiple components have the same problem probability, the steps are described beginning with the easiest one.
- After performing each step, check to see if the problem has been resolved by making test prints. If the problem persists, proceed to the next step.
- 5) After completion of the troubleshooting, check that all connectors and cables have been reconnected and screws have been tightened firmly.
  - 6) Whenever you have performed replacement or repair services, make test prints to check whether the problem has been resolved.

### 6.1.2 Troubleshooting When Warnings Occur

#### 6.1.2.1 Ink Level: Check

iPF8000

##### <Cause>

The printer has detected that the ink level is below the lower limit (20% of the capacity) by ink dot count.

##### <Probable fault location>

Ink tank, ink tank unit, or main controller

##### <Countermeasure>

- 1) Check the ink level.
- 2) Replace the ink tank.
- 3) Check the connector of the ink tank unit.
- 4) Replace the ink tank unit.
- 5) Replace the main controller PCB.

#### 6.1.2.2 Check maint cartridge capacity.

iPF8000

##### <Cause>

The machine has detected that the maintenance cartridge is nearly full of waste ink (about 80% of the total capacity of the maintenance cartridge).

##### <Probable fault location>

Maintenance cartridge or main controller

##### <Countermeasure>

- 1) Maintenance cartridge  
Check [SERVICE MODE] > [COUNTER] > [PRINTER] > [W-INK]. If the free space is nearly at the limit (0%), replace the maintenance cartridge.
- 2) Replace the main controller PCB.

#### 6.1.2.3 Ink tank is empty. Replace the ink tank.

iPF8000

##### <Cause>

Ink detection sensor has detected that the ink tank is empty.

##### <Probable fault location>

Ink tank, ink tank unit, main controller PCB

##### <Countermeasure>

- 1) Replace the ink tank
- 2) Replace the ink tank unit
- 3) Replace the main controller PCB

#### 6.1.2.4 No ink tank loaded. Check ink tank

iPF8000

##### <Cause>

Ink tank was not detected during printing.

##### <Probable fault location>

Ink tank, ink tank unit, main controller PCB

**<Countermeasure>**

- 1) Check the ink tank to see if it is set properly.
- 2) Replace the ink tank.
- 3) Replace the ink tank unit.
- 4) Replace the main controller PCB.

**6.1.2.5 Close Ink Tank Cover**

iPF8000

**<Cause>**

The ink tank cover has been opened during printing,

**<Probable fault location>**

Operation method, ink tank cover switch, ink tank unit, main controller PCB

**<Countermeasure>**

- 1) Check the operation method  
Make sure to have the ink tank cover closed
- 2) Visual check  
If the ink tank cover is damaged or deformed, replace it.
- 3) Replace the ink tank unit.
- 4) Replace the main controller PCB.

**6.1.2.6 End of paper feed. Cannot feed paper more.**

iPF8000

**<Cause>**

In the manual feed mode, the main controller detected that the roll media had been fed by the maximum amount.  
Maximum backward feed amount: Printing standby position (on the feed roller)  
Maximum forward feed amount: Until the media sensor detects absence of roll media.

**<Probable fault location>**

Media, media sensor, main controller PCB

**<Countermeasure>**

- 1) Media check  
If there is any damage or break on the media or the media size is not the specified one, replace the media.
- 2) Media loading position check  
If the media loading position is wrong, load the media again.
- 3) Media sensor  
Check for normal operation. If the operation is abnormal, replace the media sensor.
- 4) Replace the main controller PCB.

**6.1.2.7 Paper Type Wrong**

iPF8000

\* Occurs as a warning when "ON" is selected for "Ignore Mismatch".

**<Cause>**

The type of the loaded media was different from the media type specified on the driver.

**<Probable fault location>**

Media, main controller PCB

**<Countermeasure>**

- 1) Media check  
Load correct media type.
- 2) Replace the main controller PCB

**6.1.2.8 GARO W12xx**

iPF8000

Either of the following numbers will be displayed for "xx" (21, 22, 23, 25, 31, 32, 33, 34, 35)

**<Cause>**

The GARO command in the received data was invalid.

**<Probable fault location>**

Operation method or main controller

**<Countermeasure>**

- 1) Check the operation method and retry printing.
- 2) Replace the main controller PCB.

**6.1.2.9 Check printed document.**

iPF8000

**<Cause>**

The number of non-discharging nozzles has exceeded the number of nozzles that can back up the non-discharging.

**<Probable fault location>**

Printhead, head management sensor, head relay PCB, carriage relay PCB, main controller PCB

**<Countermeasure>**

- 1) Clean the printhead
  - 2) Replace the printhead
  - 3) Replace the head management sensor unit.
  - 4) Select [SERVICE MODE] > [ADJUST] > [NOZZLE CHK POS].
  - 5) Head relay PCB
- Check the terminal connected to the printhead. If there is any problem, replace the head relay PCB.
- 6) Replace the carriage relay PCB
  - 7) Replace the main controller PCB

**6.1.2.10 Prepare for parts replacement. Call for service.**

iPF8000

**<Cause>**

Replacing time of the consumable parts are near.

**<Probable fault location>**

Consumable parts, main controller PCB

**<Countermeasure>**

- 1) Consumable parts
- Check [SERVICE MODE] > [COUNTER] > [PARTS CNT.]
- If there is a COUNTER showing "W1" status (over 90% of the use rate), replace the consumable parts corresponded to the COUNTER.
- After replacing the parts, select [SERVICE MODE] > [INITIALIZE] > [PARTS COUNTER] to initialize the counter.
- 2) Replace the main controller PCB

**6.1.2.11 Parts replacement time has passed. Call for service.**

iPF8000

**<Cause>**

The consumable parts need to be replaced.

**<Probable fault location>**

Consumable parts, main controller PCB

**<Countermeasure>**

- 1) Consumable parts
- Check [SERVICE MODE] > [COUNTER] > [PARTS CNT.]
- If there is a COUNTER showing "W2" status (over 100% of the use rate), replace the consumable parts corresponded to the COUNTER.
- After replacing the parts, select [SERVICE MODE] > [INITIALIZE] > [PARTS COUNTER] to initialize the counter.
- 2) Replace the main controller PCB

**6.1.3 Troubleshooting When Errors Occur****6.1.3.1 03870001-2015 Cutter error**

iPF8000

**<Cause>**

The machine has failed the auto cutting of media.

After roll media cutting, the multi sensor could not detect the media end.

**<Probable fault location>**

Media, multi sensor, cutter unit, head relay PCB, or main controller PCB

**<Countermeasure>**

- 1) Manual cut
- Cut the media manually with the scissors or cutter.
- 2) Media check
- If the media size is not the specified one, replace the media.
- 3) Visual check
- Remove foreign substances from the cutter unit if any.
- If the cutter unit is damaged or deformed, replace it.
- 4) Replace the multi sensor
  - 5) Replace the main controller PCB

**6.1.3.2 03010000-200C/03010000-200E/03010000-200F/03010000-2017/03010000-2018/03016000-2010 multi sensor**

iPF8000

**<Cause>**

When media was fed, the multi sensor could not detect the media width.

When the right edge of media was detected, the multi sensor detected that the media had been loaded at a wrong position.

When the leading edge of media was to be detected, the multi sensor could not detect the leading edge of media.

When media was fed, the multi sensor detected media smaller than the specified size.

When media was fed, the multi sensor detected media larger than the specified size.

When media was fed, the multi sensor detected skew greater than the specified one.

When media was fed, the multi sensor could not detect the right edge of media.

When media was fed, the multi sensor could not detect the left edge of media.

**<Probable fault location>**

Media, media loading method, paper path, multi sensor, head relay PCB, carriage relay PCB, or main controller PCB

**<Countermeasure>**

- 1) Media check
- If there is any print or stain in the detection area on the media or the media size is not the specified one, replace the media.
- 2) Media loading position check
- If the media loading position is wrong, load the media again.
- 3) Visual check

Remove foreign substances from multi sensor if any.

4) Multi sensor

Select [SERVICE MODE] > [DISPLAY] > [SYSTEM] > [SIZE CR] to check the value read by the multi sensor. If the value is wrong, replace the multi sensor.

5) Replace the head relay PCB.

6) Cable continuity check

If continuity of the cable between the head relay PCB and the carriage relay PCB is abnormal, replace the cable.

7) Replace the carriage relay PCB.

8) Cable continuity check

If continuity of the cable between the carriage relay PCB and the main controller PCB is abnormal, replace the cable.

9) Replace the main controller PCB.

### 6.1.3.3 03031000-2E0F Upper cover sensor error

iPF8000

#### <Cause>

The upper cover lock switch detected that the upper cover was open with the upper cover locked.

#### <Probable fault location>

upper cover, upper cover lock switch, upper cover lock, or main controller PCB

#### <Countermeasure>

1) Visual check

If the upper cover sensor flag or upper cover lock switch is damaged or deformed, replace it.

Remove foreign substances from the upper cover lock if any.

2) Upper cover lock switch

Check the upper cover lock switch for normal operation. If the operation is abnormal, replace the upper cover lock switch.

3) Upper cover lock unit

Check the upper cover lock for normal operation. If the operation is abnormal, replace the upper cover lock unit.

4) Replace the main controller PCB.

### 6.1.3.4 03031101-2E10 Ink tank cover switch error

iPF8000

#### <Cause>

During printing, ink tank cover switch has detected the open state of the ink tank.

#### <Probable fault location>

Operation method, ink tank cover, ink tank cover switch, main controller PCB

#### <Countermeasure>

1) Operation check

Close the ink tank cover surely.

2) Replace the ink tank cover unit.

3) Replace the main controller unit.

### 6.1.3.5 03031000-2E11 Carriage cover sensor error

iPF8000

#### <Cause>

The carriage cover sensor detected that the carriage cover was opened with the upper cover locked.

#### <Probable fault location>

Operation method, carriage cover sensor, carriage relay PCB, or main controller PCB

#### <Countermeasure>

1) Operation check

Close the carriage cover tightly.

2) Visual check

If the carriage cover is damaged or deformed, replace it.

3) Carriage cover sensor

check the carriage cover sensor for normal operation. If the operation is abnormal, replace the carriage cover sensor.

4) Replace the carriage relay PCB.

5) Cable continuity check

If continuity of the cable between the carriage relay PCB and the main controller PCB is abnormal, replace the cable.

6) Replace the main controller PCB.

### 6.1.3.6 03031000-2E12 Defective paper release lever

iPF8000

#### <Cause>

The pressure release switch detected that the paper release lever was opened with the upper cover locked.

#### <Probable fault location>

Operation method, pressure release switch, or main controller PCB

#### <Countermeasure>

1) Operation check

Close the paper release lever fully.

2) Visual check

If the paper release lever is damaged or deformed, replace it.

3) Pressure release switch

check the pressure release switch for normal operation. If the operation is abnormal, replace the pressure release switch.

4) Replace the main controller PCB.

### 6.1.3.7 03010000-2016/03010000-2E27 Paper feed error

iPF8000

#### <Cause>

During paper feed or delivery, paper jammed or paper was fed improperly.  
During printing, paper was fed out of the way.  
During paper feed, delivery or printing, the feed motor has gone out of synchronization.

#### <Probable fault location>

Paper path, media sensor, feed roller encoder, feed roller HP sensor, feed motor, feed roller, or main controller PCB

#### <Countermeasure>

- 1) Visual check  
Remove foreign substances from the paper path and media sensor if any.  
If the paper feed surface or moving part of the paper path is damaged or deformed, replace the paper path.
- 2) Media sensor  
Check for normal operation. If the operation is abnormal, replace the media sensor.
- 3) Replace the feed roller sensor unit  
Check for normal operation. If the operation is abnormal, replace the feed roller sensor unit.
- 4) Replace the feed motor.
- 5) Replace the feed roller.
- 6) Replace the main controller PCB.

### 6.1.3.8 03010000-200D Cut media end error

iPF8000

#### <Cause>

When cut media was fed by the specified length, the media sensor could not detect the trailing edge of the cut media.  
During printing, the media sensor detected the trailing edge of the cut media at the position different from that detected during cut media feed.

#### <Probable fault location>

Paper path, media sensor, feed roller encoder, feed roller HP sensor, feed motor, feed roller, or main controller PCB

#### <Countermeasure>

- 1) Visual check  
Remove foreign substances from the paper path and media sensor if any.  
If the paper feed surface or moving part of the paper path is damaged or deformed, replace the paper path.
- 2) Media sensor,  
Check the media sensor for normal operation. If the operation is abnormal, replace the media sensor.
- 3) Replace the feed roller sensor unit  
Check for normal operation. If the operation is abnormal, replace the feed roller sensor unit.
- 4) Replace the feed motor.
- 5) Replace the feed roller.
- 6) Replace the main controller PCB.

### 6.1.3.9 03010000-2E1F/03060000-2E14/03060A00-2E00/03061000-2E15/03063000-2E08/03860002-2E02/03860002-2E0A/ 03860002-2E0C Path mismatch error

iPF8000

#### <Cause>

The size of the media used to print the adjustment pattern was smaller than the specified one.  
The media size specified using the printer driver was different from the size of the actually loaded media.  
No roll media was loaded when data was received with roll media specified as a media type.  
The type of the loaded media was different from the media type specified using the printer driver.  
No cut media was loaded when data was received with cut media specified as a media type.  
Data requiring roll media was received when cut media were loaded.  
Data requiring cut media was received when roll media was loaded.

#### <Probable fault location>

Media type or main controller PCB

#### <Countermeasure>

- 1) Media check  
Check the loaded media. If the media type is different from that required by the send data, no media is loaded, or the size of the loaded media is not the specified one, load correct media.
- 2) Replace the main controller PCB.

### 6.1.3.10 03862000-2E09 Insufficient roll media error

iPF8000

#### <Cause>

The machine detected that the remaining roll media was insufficient.

#### <Probable fault location>

Roll media or main controller PCB

#### <Countermeasure>

- 1) Replace the roll media.

- 2) Check the input value  
Input the correct value of the remaining length of the roll media when setting it.
- 3) Replace the main controller PCB.

#### 6.1.3.11 03890000-2920 Media take-up motor error

iPF8000

##### <Cause>

Media take-up motor cannot be driven.

##### <Probable fault location>

Media, media take-up paper detection sensor, media take-up motor, media take-up PCB, media take-up relay PCB, main controller PCB

##### <Countermeasure>

- 1) Visual check

If the winding media is abnormal, rewind the media correctly after the cause is removed.

Remove foreign substances between the light-emission unit and light-receiving unit of media take-up paper detection sensor if any.

- 2) Replace the media take-up paper detection sensor.
- 3) Replace the media take-up drive unit.
- 4) Replace the media take-up relay PCB.
- 5) Replace the main controller PCB.

#### 6.1.3.12 03890000-2921 Media take-up paper detection sensor error

iPF8000

##### <Cause>

Media take-up paper detection sensor has detected foreign substances.

##### <Probable fault location>

Media take-up paper detection sensor, media take-up motor, media take-up PCB, media take-up relay PCB, main controller PCB

##### <Countermeasure>

- 1) Visual check

Remove foreign substances between the light-emission unit and light-receiving unit of media take-up paper detection sensor if any.

- 2) Replace the Media take-up paper detection sensor.
- 3) Cable continuity check

If continuity of the cable between the Replace the media take-up paper detection sensor and the media take-up drive unit is abnormal, replace the cable.

- 4) Replace the media take-up drive unit.
- 5) Replace the Media take-up relay PCB.
- 6) Replace the main controller PCB.

#### 6.1.3.13 03060A00-2E1B Roll media end error

iPF8000

##### <Cause>

During printing or roll media feed, the media sensor detected the end of the roll media.

##### <Probable fault location>

Roll media, media sensor, or main controller PCB

##### <Countermeasure>

- 1) Roll media

If roll media is used up, load new roll media.

- 2) Media sensor  
Check for normal operation. If the operation is abnormal, replace the media sensor.
- 3) Replace the main controller PCB.

#### 6.1.3.14 03861001-2405/03861001-2406 Borderless printing error

iPF8000

##### <Cause>

The position where the media is loaded is not suitable for borderless printing.

The received data is not suitable for borderless printing.

##### <Probable fault location>

Operation method, media, multi sensor, main controller PCB

##### <Countermeasure>

- 1) Check the operation method and retry printing.
- 2) Media check  
Check the loaded media. If it is abnormal, retry to load the media.
- 3) Multi sensor  
Check for normal operation. If the operation is abnormal, replace the multi sensor.
- 4) Replace the main controller PCB

#### 6.1.3.15 03810104-2500/03810101-2501/03810102-2502/03810103-2503/03810112-2504/03810113-2505/03810106-2506/ 03810105-2508/03810115-2509/03810107-250A/03810109-250B/03810108-250C No ink error

iPF8000

##### <Cause>

No ink status was detected in the ink tank.

##### <Probable fault location>

Ink tank, ink tank unit, or main controller PCB

**<Countermeasure>**

- 1) Replace the ink tank.
- 2) Replace the ink tank unit.
- 3) Replace the main controller PCB.

**6.1.3.16 03830104-2520/03830101-2521/03830102-2522/03830103-2523/03830112-2524/03830113-2525/03830106-2526/03830105-2528/03830115-2529/03830107-252A/03830109-252B/03830108-252C Ink tank is not installed. ( This error occurs when the ink tank is replaced.)**

iPF8000

**<Cause>**

When the ink tank was replaced, the closed state of the ink cover was detected with the ink tank removed.

**<Probable fault location>**

Operation method, ink tank, ink tank cover switch, ink tank unit, or main controller PCB

**<Countermeasure>**

- 1) Operation check  
Install the ink tank correctly.
- 2) Visual check  
Remove foreign substances from the ink tank contacts and ink tank cover switch if any.
- 3) Replace the ink tank.
- 4) Ink tank cover switch  
Check for normal operation. If the operation is abnormal, replace the ink tank cover switch.
- 5) Replace the ink tank unit.
- 6) Replace the main controller PCB.

**6.1.3.17 03800204-2540/03830201-2541/03830202-2542/03830203-2543/03830212-2544/03830213-2545/03830206-2546/03830205-2548/03830215-2549/03830207-254A/03830209-254B/03830208-254C Invalid ink tank ID**

iPF8000

**<Cause>**

The installed ink tank is wrong.

**<Probable fault location>**

Operation method, Ink tank, ink tank unit, or main controller PCB

**<Countermeasure>**

- 1) Operation check  
Install the ink tank correctly.
- 2) Replace the ink tank.
- 3) Replace the ink tank unit.
- 4) Replace the main controller PCB.

**6.1.3.18 03830304-2560/03830301-2561/03830302-2562/03830303-2563/03830312-2564/03830313-2565/03830306-2566/03830305-2568/03830305-2568/03830315-2569/03830307-256A/03830309-256B/03830308-256C Ink tank EEPROM error**

iPF8000

**<Cause>**

An ink tank EEPROM checksum error was detected.

**<Probable fault location>**

Ink tank, ink tank unit, or main controller PCB

**<Countermeasure>**

- 1) Replace the ink tank.
- 2) Replace the ink tank unit.
- 3) Replace the main controller PCB.

**6.1.3.19 03810204-2570/03810201-2571/03810202-2572/03810203-2573/03810212-2574/03810213-2575/03810206-2576/03810205-2578/03810215-2579/03810207-257A/03810209-257B/03810208-257C Ink low error (occurs when replacing the printhead)**

iPF8000

**<Cause>**

The printhead was replaced when the levels of remaining ink was level one.

**<Probable fault location>**

Ink tank, ink tank unit, or main controller PCB

**<Countermeasure>**

- 1) Replace the ink tank.
- 2) Replace the ink tank unit.
- 3) Replace the main controller PCB.

### 6.1.3.20 03810204-2580/03810201-2581/03810202-2582/03810203-2583/03810212-2584/03810213-2585/03810206-2586/03810205-2588/03810215-2589/03810207-258A/03810209-258B/03810208-258C Ink low error (occures when cleaning B is executed)

iPF8000

#### <Cause>

Cleaning B was executed when the levels of remaining ink was level one.

#### <Probable fault location>

Ink tank, ink tank unit, or main controller PCB

#### <Countermeasure>

- 1) Replace the ink tank.
- 2) Replace the ink tank unit.
- 3) Replace the main controller PCB.

### 6.1.3.21 03810204-2590/03810201-2591/03810202-2592/03810203-2593/03810212-2594/03810213-2595/03810206-2596/03810205-2598/03810215-2599/03810207-259A/03810209-259B/03810208-259C Ink low error (occures when printing)

iPF8000

#### <Cause>

Ink level low was detected when printing.

#### <Probable fault location>

Ink tank, ink tank unit, or main controller PCB

#### <Countermeasure>

- 1) Replace the ink tank.
- 2) Replace the ink tank unit.
- 3) Replace the main controller PCB.

### 6.1.3.22 03800301-2801/03800201-2802/03800401-2803/03800201-2812/03800302-2809/03800202-280A/03800402-280B/03800202-2813 Printhead error

iPF8000

#### <Cause>

Improper installation of the printhead R was detected.  
 A checksum error was detected in the EEPROM of the printhead R.  
 Printhead R DI correction failed.  
 The version of printhead R was different.  
 Improper installation of the printhead L was detected.  
 A checksum error was detected in the EEPROM of the printhead L.  
 Printhead L DI correction failed.  
 The version of printhead L was different.

#### <Probable fault location>

Printhead, head relay PCB, carriage relay PCB, or main controller PCB

#### <Countermeasure>

- 1) Replace the printhead.
- 2) Cable continuity check  
 If continuity of the cable between the head relay PCB and the carriage relay PCB is abnormal, replace the cable.
- 3) Replace the Head relay PCB.
- 4) Cable continuity check  
 If continuity of the cable between the carriage relay PCB and the main controller PCB is abnormal, replace the cable.
- 5) Replace the carriage relay PCB.
- 6) Replace the main controller PCB.

### 6.1.3.23 03800101-2800/03800102-2808/03800201-2804/03800202-2807 Printhead installing error

iPF8000

#### <Cause>

Printhead R was not installed.  
 Printhead L was not installed.  
 Printhead R was installed to the left side.  
 Printhead L was installed to the right side.

#### <Probable fault location>

Operation method, printhead, head relay PCB, carriage relay PCB, or main controller PCB

#### <Countermeasure>

- 1) Operation check  
 Install the printhead properly.
- 2) Replace the printhead.
- 3) Cable continuity check  
 If continuity of the cable between the head relay PCB and the carriage relay PCB is abnormal, replace the cable.
- 4) Replace the Head relay PCB.
- 5) Cable continuity check  
 If continuity of the cable between the carriage relay PCB and the main controller PCB is abnormal, replace the cable.
- 6) Replace the carriage relay PCB.
- 7) Replace the main controller PCB.

### 6.1.3.24 03800501-280D/03800502-280E Defective printhead nozzle

iPF8000

#### <Cause>

Many non-discharging nozzles were detected on printhead R.  
Many non-discharging nozzles were detected on printhead L.

#### <Probable fault location>

Printhead, head management sensor, or main controller PCB

#### <Countermeasure>

- 1) Clean the printhead.
- 2) Replace the printhead.
- 3) Replace the head management sensor.
- 4) Replace the main controller PCB.

### 6.1.3.25 03841201-2816/03841201-2817/03841101-2818/03841001-2819/03841001-281B Maintenance cartridge error

iPF8000

#### <Cause>

The maintenance cartridge is full.  
The maintenance cartridge does not have the free space for various types of cleaning.  
No maintenance cartridge is installed.  
The EEPROM of the maintenance cartridge is abnormal.  
A maintenance cartridge ID error occurred.

#### <Probable fault location>

Maintenance cartridge, maintenance cartridge relay PCB, or main controller PCB

#### <Countermeasure>

- 1) Replace the maintenance cartridge.
- 2) Replace the maintenance cartridge relay PCB.
- 3) Replace the main controller PCB.

### 6.1.3.26 03010000-2820/03010000-2821/03010000-2822/03010000-2823/03130031-2F32/03010000-2F33/ Adjustment error

iPF8000

#### <Cause>

Auto head alignment selected from the user menu could not be carried out because the alignment pattern read result was NG.  
Auto LF adjustment selected from the user menu or in the service mode could not be carried out because the adjustment pattern read result was NG.  
Decentering correction selected in the service mode cannot be carried out because the correction pattern read result was NG.  
Auto LF adjustment selected from the user menu or in the service mode could not be carried out because the head check pattern read result was NG.  
Optical axis adjustment selected in the service mode cannot be carried out because the adjustment pattern read result was NG.

When adjustment has been carried after selecting [SERVICE MODE]>[ADJUST]>[PRINT PATTERN]>[OPTICAL AXIS] or [SERVICE MODE]>[ADJUST]>[PRINT PATTERN]>[LF TUNING] in the service mode, check that photo glossy paper is used.

#### <Probable fault location>

Operation method, printhead, multi sensor, head relay PCB, carriage relay PCB, or main controller PCB

#### <Countermeasure>

- 1) Check whether the media type selected on the operation panel is the same as the type of the media used to print the adjustment pattern. If they are different, retry adjustment using the media of the type selected on the operation panel.
- 2) If ink bleeds greatly, change the media.
- 3) Carry out head cleaning, and retry adjustment. If the adjustment result is poor, replace the printhead.
- 4) Cable continuity check  
If continuity of the cable between the multi sensor and the head relay PCB is abnormal, replace the cable.
- 5) Cable continuity check  
If continuity of the cable between the head relay PCB and the carriage relay PCB is abnormal, replace the cable.
- 6) Cable continuity check  
If continuity of the cable between the carriage relay PCB and the main controller PCB is abnormal, replace the cable.
- 7) Replace the multi sensor, and then retry adjustment.
- 8) Replace the head relay PCB.
- 9) Replace the carriage relay PCB.
- 10) Replace the main controller PCB.

### 6.1.3.27 03130031-260E Gap detection error

iPF8000

#### <Cause>

A detection error occurred due to damaged hardware, uncorrected gap, or damaged correction data.

#### <Probable fault location>

Multi sensor, head relay PCB, carriage relay PCB or main controller PCB

#### <Countermeasure>

- 1) Cable continuity check  
If continuity of the cable between the multi sensor and the head relay PCB is abnormal, replace the cable.
- 2) Replace the multi sensor.
- 3) Cable continuity check

If continuity of the cable between the head relay PCB and the carriage relay PCB is abnormal, replace the cable.

4) Replace the head relay PCB.

5) Cable continuity check

If continuity of the cable between the carriage relay PCB and the main controller PCB is abnormal, replace the cable.

6) Replace the carriage relay PCB.

7) Replace the main controller PCB.

#### 6.1.3.28 03130031-260F Gap adjustment error

iPF8000

##### <Cause>

Gap reference surface error (This error occurs only in the service mode.)

##### <Probable fault location>

Multi sensor reference plate, multi sensor, head relay PCB, carriage relay PCB or main controller PCB

##### <Countermeasure>

1) Replace the multi sensor reference plate.

2) Cable continuity check

If continuity of the cable between the multi sensor and the head relay PCB is abnormal, replace the cable.

3) Replace the multi sensor.

4) Cable continuity check

If continuity of the cable between the head relay PCB and the carriage relay PCB is abnormal, replace the cable.

5) Replace the head relay PCB.

6) Cable continuity check

If continuity of the cable between the carriage relay PCB and the main controller PCB is abnormal, replace the cable.

7) Replace the carriage relay PCB.

8) Replace the main controller PCB.

#### 6.1.3.29 03130031-2618 VH voltage abnormality error

iPF8000

##### <Cause>

The voltage of the print head is abnormal.

##### <Probable fault location>

Printhead, head relay PCB, carriage relay PCB, main controller PCB

##### <Countermeasure>

1) Replace the printhead.

2) Cable continuity check

If continuity of the cable between the head relay PCB and the carriage relay PCB is abnormal, replace the cable.

3) Replace the head relay PCB.

4) Cable continuity check

If continuity of the cable between the carriage relay PCB and the main controller PCB is abnormal, replace the cable.

5) Replace the carriage relay PCB.

6) Replace the main controller PCB.

#### 6.1.3.30 03800500-2F2F/03800500-2F30 Head management sensor error

iPF8000

##### <Cause>

The head management sensor detected an ink discharge error.

A sensor sensitivity error was detected during head management sensor position adjustment.

##### <Probable fault location>

Printhead, head management sensor, or main controller PCB

##### <Countermeasure>

1) Replace the print head.

2) Visual check

Remove foreign substances from the head management sensor if any.

3) Replace the head management sensor.

4) Replace the main controller PCB.

#### 6.1.3.31 03130031-2F16 Mist fan error

iPF8000

##### <Cause>

Mist fan rotation could not be detected during mist fan rotation.

##### <Probable fault location>

Mist fan, main controller PCB

##### <Countermeasure>

1) Replace the mist fan.

2) Replace the main controller PCB.

#### 6.1.3.32 03130031-2F17 Suction fan error

iPF8000

##### <Cause>

When the suction fan was driven, the lock signal was detected for more than the specified time.

**<Probable fault location>**

Suction fan or main controller PCB

**<Countermeasure>**

- 1) Suction fan
- 2) Replace the main controller PCB.

**6.1.3.33 03030000-2E21 IEEE1394 Error**

iPF8000

**<Cause>**

The IEEE1394 interface is faulty.

**<Probable fault location>**

IEEE1394 interface board or main controller PCB

**<Countermeasure>**

- 1) Turn off the printer, and then turn it on again.
- 2) IEEE1394 interface board

Remove the IEEE1394 interface board, install it again, and then turn on the printer. If the trouble persists, replace the IEEE1394 interface board.

- 3) Replace the main controller PCB.

**6.1.3.34 03130031-2F25 Carriage home position error**

iPF8000

**<Cause>**

The carriage home position could not be detected within the specified time.

**<Probable fault location>**

Sensor flag, carriage HP sensor, linear scale, linear encoder, carriage relay PCB, or main controller PCB

**<Countermeasure>**

- 1) Visual check

Remove foreign substances from the sensor flag, carriage HP sensor, linear scale, and linear encoder if any.

- 2) Replace the carriage HP sensor.
- 3) Replace the linear scale.
- 4) Replace the linear encoder.
- 5) Replace the carriage relay PCB.
- 6) Replace the main controller PCB.

**6.1.3.35 03130031-2F26/03130031-2F27 Carriage motor error**

iPF8000

**<Cause>**

The carriage did not operate because the carriage motor was overloaded due to a physical cause such as a jam.

The carriage motor did not reach the specified speed within the specified time.

**<Probable fault location>**

Carriage pathway, carriage rail, carriage belt, linear scale, linear encoder, carriage motor, carriage relay PCB, or main controller PCB

**<Countermeasure>**

- 1) Carriage pathway check

Remove foreign substances (jammed paper) from the carriage pathway if any.

- 2) Carriage rail

Visually check whether the carriage rail is dirty. If the carriage rail is dirty, clean it.

- 3) Carriage belt

Visually check whether the carriage belt is loose. If the carriage belt is loose, remove it and then reinstall it.

- 4) Replace the linear scale.
- 5) Replace the linear encoder.
- 6) Replace the carriage motor.
- 7) Replace the carriage relay PCB.
- 8) Replace the main controller PCB.

**6.1.3.36 03130031-2F1F/03130031-2F20 Defective sensor in purge unit**

iPF8000

**<Cause>**

The each sensors in the purge unit could not detect the home position of the purge motor within the specified time.

**<Probable fault location>**

Purge unit or main controller PCB

**<Countermeasure>**

- 1) Visual check

Remove foreign substance from purge unit if any.

- 2) Replace the purge unit.
- 3) Replace the main controller PCB.

**6.1.3.37 03130031-2F22/03130031-2F23/03130031-2F2D Purge motor driving error**

iPF8000

**<Cause>**

The purge motor did not reach the specified speed within the specified time.

**<Probable fault location>**

Purge unit or main controller PCB

**<Countermeasure>**

- 1) Visual check  
Remove foreign substance from purge unit if any.
- 2) Replace the purge unit.
- 3) Replace the main controller PCB.

**6.1.3.38 03130031-2F2A Feed roller home position error**

iPF8000

**<Cause>**

During power-on, the feed roller HP sensor could not detect that the reference of Scale that exists on encoder film area color change from transparent to black.

**<Probable fault location>**

Feed roller encoder film, feed roller encoder, feed roller HP sensor, feed motor, or main controller PCB

**<Countermeasure>**

- 1) Visual check  
Remove foreign substances from the feed roller encoder film if any.
- 2) Feed roller sensor unit  
Check for normal operation. If the operation is abnormal, replace the feed roller sensor unit.
- 3) Replace the feed roller encoder film (pulley unit).
- 4) Replace the feed motor.
- 5) Replace the main controller PCB.

**6.1.3.39 03130031-2F3A valve open/close error**

iPF8000

**<Cause>**

When the ink supply valve opened or closed, valve open/closed detection sensor could not detect the valve cam rotation.

**<Probable fault location>**

Valve open/closed detection sensor, valve motor, or main controller PCB

**<Countermeasure>**

- 1) Visual check  
Remove foreign substances from the motor, gear, and sensor of the valve open/close mechanism if any.
- 2) Replace the ink supply drive unit.
- 3) Replace the main controller PCB.

**6.1.3.40 03130031-2F2E Roll media feeding error**

iPF8000

**<Cause>**

The media sensor could not detect the media within the specified time.

**<Probable fault location>**

Media, media sensor, roll media feeding unit, or main controller PCB

**<Countermeasure>**

- 1) Visual check  
If the media is bent, set the media once again.
- 2) Replace the media sensor.
- 3) Replace the roll media feeding unit.
- 4) Replace the main controller PCB.

**6.1.3.41 03130031-2F28 Lift motor time out error**

iPF8000

**<Cause>**

The lift cam sensor could not detect the home position of the lift motor within the specified time.

**<Probable fault location>**

Lift cam, lift cam sensor, lift drive unit, or main controller PCB

**<Countermeasure>**

- 1) Visual check  
Remove foreign substances from the lift cam or the lift drive unit if any.
- 2) Replace the lift cam.
- 3) Replace the lift cam sensor.
- 4) Replace the lift drive unit.
- 5) Replace the main controller PCB.

### 6.1.3.42 03130031-2F13 A/D Converter external trigger output stopped

iPF8000

**<Cause>**

Defective main controller PCB

**<Probable fault location>**

Main controller PCB

**<Countermeasure>**

- 1) Turn off the printer, and then turn it off again.
- 2) Replace the main controller PCB.

### 6.1.3.43 03130031-2F14 ASIC Register cannot be written.

iPF8000

**<Cause>**

A main controller PCB firmware error occurred.

**<Probable fault location>**

Main controller PCB

**<Countermeasure>**

- 1) Turn off the printer, and then turn it on again.
- 2) Replace the main controller PCB.

### 6.1.3.44 03900001-4042/03900001-4049 Firmware error

iPF8000

**<Cause>**

Firmware cannot be recognized.  
The firmware is for another model.

**<Probable fault location>**

Firmware or main controller PCB

**<Countermeasure>**

- 1) Firmware  
Check the version of the transferred firmware and the compatible models.
- 2) Replace the main controller PCB.

### 6.1.3.45 E194-4034 Sensor calibration error

iPF8000

**<Cause>**

When executing [SERVICE MODE] > [ADJUST] > [SENSOR CALIB.], multi sensor calibration could not be done.

**<Probable fault location>**

Test chart, multi sensor, main controller PCB

**<Countermeasure>**

- 1) Test chart  
Check the test chart. if there is a problem, exchange it.
- 2) Multi sensor  
Check for normal operation. If the operation is abnormal, replace it.
- 3) Replace the main controller PCB

## 6.1.4 Troubleshooting When Service Call Errors Occur

### 6.1.4.1 E141-4046 Recovery system's count error

iPF8000

**<Cause>**

The machine detected that the rotation count of the purge unit reached the specified value.

**<Probable fault location>**

Purge unit or main controller PCB

**<Countermeasure>**

- 1) Replace the purge unit.  
After replacing the purge unit, select [SERVICE MODE]>[INITIALIZE]>[PARTS COUNTER] to reset the counter.
- 2) Replace the main controller PCB.

### 6.1.4.2 E144-4047 Supply system's count error

iPF8000

**<Cause>**

The machine detected that the carriage scan count reached the specified value.

**<Probable fault location>**

Ink tube unit, or main controller PCB

**<Countermeasure>**

- 1) Replace the ink tube unit.  
After replacing the ink tube unit, select [SERVICE MODE] > [INITIALIZE] > [PARTS COUNTER] to reset the counter.
- 2) Replace the main controller PCB.

#### **6.1.4.3 E146-4001 Waste ink count full**

iPF8000

**<Cause>**

The machine detected that the waste ink box or the fan unit became full of ink.

**<Probable fault location>**

Waste ink box, fan unit, or main controller PCB

**<Countermeasure>**

- 1) Replace the waste ink box or fan unit.  
After replacing the waste ink box or fan unit, select [SERVICE MODE] > [INITIALIZE] > [PARTS COUNTER] to reset the counter.
- 2) Replace the main controller PCB.

#### **6.1.4.4 E161-403E/E161-403F Abnormally high head temperature**

iPF8000

**<Cause>**

The printhead temperature became abnormally high.

**<Probable fault location>**

Printhead, head relay PCB, carriage relay PCB, or main controller PCB

**<Countermeasure>**

- 1) Start up the printer in the service mode, and then replace the printhead.
- 2) Replace the head relay PCB.
- 3) Replace the carriage relay PCB.
- 4) Replace the main controller PCB.

#### **6.1.4.5 E194-404A Non-discharge detection count error**

iPF8000

**<Cause>**

The machine detected that the non-discharge count reached the specified value.

**<Probable fault location>**

Head management sensor or main controller PCB

**<Countermeasure>**

- 1) Replace the head management sensor.  
After replacing the head management sensor, select [SERVICE MODE] > [INITIALIZE] > [PARTS COUNTER] to reset the counter.
- 2) Replace the main controller PCB.

#### **6.1.4.6 E196-4040/E196-4041/E196-4042/E196-4043/E196-4044/E196-4045 Main controller PCB error**

iPF8000

**<Cause>**

The main controller PCB is defective.

**<Probable fault location>**

Firmware or main controller PCB

**<Countermeasure>**

- 1) Upgrade the firmware.
- 2) Replace the main controller PCB.

#### **6.1.4.7 E198-401C/E198-401D/E198-401E RTC error**

iPF8000

**<Cause>**

The RTC of the main controller is not found.  
The battery capacity is low.

**<Probable fault location>**

Lithium battery or main controller

**<Countermeasure>**

- 1) Start up the printer in the service mode, and then turn off the power.
- 2) Replace the lithium battery.

3) Replace the main controller

## 6.2 Location of Connectors and Pin Arrangement

### 6.2.1 Main controller PCB

iPF8000

J1001			
Pin Number	Signal name	IN/OUT	Function
1	VBUS	IN	USB VBUS(+5V)

## 6.3 Version Up

---

### 6.3.1 Firmware Update Tool

iPF8000 / iPF8000S / iPF8100

Use of the following tools allows you to update the firmware of the main controller incorporated in the printer.

- imagePROGRAF Firmware Update Tool
- L Printer Service Tool

#### 1. imagePROGRAF Firmware Update Tool

imagePROGRAF Firmware Update Tool is the same as that for user.

Procedure:

- 1) Start imagePROGRAF Firmware Update Tool.
- 2) Place the printer in the online mode.
- 3) Transfer the firmware data to the printer according to the instructions shown on the display.
- 4) The data shown on the LCD on the operation panel changes and the firmware is updated automatically.
- 5) When firmware update is completed, the printer will start again.

File transfer route:

USB, network, IEEE1394

#### 2. L Printer Service Tool

Procedure:

- 1) Start L Printer Service Tool.
- 2) Place the printer in the online mode.
- 3) Specify the firmware file(.jdl) and then transfer it.
- 4) The data shown on the LCD on the operation panel changes and the firmware is updated automatically.
- 5) When firmware update is completed, the printer will start again.

File transfer route:

USB, network, IEEE1394

### 6.3.2 Firmware Update Tool

iPF8300 / iPF8300S

Use of the following tools allows you to update the firmware of the main controller incorporated in the printer.

- imagePROGRAF Firmware Update Tool
- L Printer Service Tool

#### 1. imagePROGRAF Firmware Update Tool

imagePROGRAF Firmware Update Tool is the same as that for user.

Procedure:

- 1) Start imagePROGRAF Firmware Update Tool.
- 2) Place the printer in the online mode.
- 3) Transfer the firmware data to the printer according to the instructions shown on the display.
- 4) The data shown on the LCD on the operation panel changes and the firmware is updated automatically.
- 5) When firmware update is completed, the printer will start again.

File transfer route:

USB, network

#### 2. L Printer Service Tool

Procedure:

- 1) Start L Printer Service Tool.
- 2) Place the printer in the online mode.
- 3) Specify the firmware file(.jdl) and then transfer it.
- 4) The data shown on the LCD on the operation panel changes and the firmware is updated automatically.
- 5) When firmware update is completed, the printer will start again.

File transfer route:

USB, network

## 6.4 Service Tools

### 6.4.1 Tool List

iPF8000 / iPF8000S / iPF8100 / iPF8300 / iPF8300S

T-6-125

General-purpose tools	Application
Long phillips screwdriver	Inserting and removing screw
Phillips screwdriver	Inserting and removing screw
Flat-head screwdriver	Removing the E-ring
Needle-nose pliers	Inserting and removing the spring parts
Hex key wrench	Inserting and removing hexagonal screws
Flat brush	Applying grease
Lint free paper	Wiping off ink
Rubber gloves	Preventing ink stains

T-6-126

Special-purpose tools	Application
Grease MOLYKOTE PG-641 (CK-0562-000)	Applying to specified locations
Grease PERMALUBE G-2 (CK-0551-020)	Applying to specified locations
Cover switch tool (QY9-0103-000)	Pressing the cover switch

## 7.1 Service Mode

---

### 7.1.1 Service Mode Operation

iPF8000 / iPF8000S / iPF8100

#### a. How to enter the Service mode

Enter the Service mode following the procedure below.

- 1) Turn off the printer.
- 2) Turn on the printer while holding down the [Paper Source]key and [Information]key.
- 3) "S" will be displayed in the upper right corner of the display showing the firmware version of the printer.
- 4) After display of "Online", pressing the [Menu] key displays the SERVICE MODE top menu and the MESSAGE LED flashes.

\* The Service mode is added to the options in the Main menu. The Service mode can be entered even in the error status(when an error message is shown on the display)by turning the power off and then using the above key operation.

#### b. How to exit the Service mode

Turn off the printer.

#### c. Key operation in the service mode

- Selecting menus and paremeters:[◀] or [▶] key
- Going to the next lower-level menu:[▼] key
- Going to the previous higher-level menu:[▲] key
- Determining a selected menu or parameter:[OK] key

### 7.1.2 Service Mode Operation

iPF8300 / iPF8300S

#### a) How to enter the Service mode

Enter service mode according to the following procedure:

- 1) Turn off the printer power.
- 2) Turn on the power while pressing the [Load] key and [Navigate] key.
  - \* Keep pressing the above keys until "Initializing" is displayed.
- 3) "S" appears at the top right of the display.
- 4) Press the ◀ key or ▶ key to choose the [Set./Adj. Menu] and press the [OK] key.  
"SERVICE MODE" appears in the menu list and the MESSAGE LED flashes.
- 5) Press the ▲ key or ▼ key to choose "SERVICE MODE" and press the [OK] key.
  - \* Service mode is added to the [Set./Adj. Menu]. Service mode can be entered even when an error occurs (an error message is displayed) by turning off the power once and then pressing the above keys.

#### b) How to exit the Service mode

Turn off the printer.

#### c) Key operation in the service mode

- Selecting menus and parameters: ◀ or ▶ key
- Going to the next lower-level menu: ▼ key
- Going to the previous higher-level menu: ▲ key
- Determining a selected menu or parameter: [OK] key

### 7.1.3 Map of the Service Mode

iPF8000

The hierarchy of menus and parameters in the Service Mode is as shown below.

### 7.1.8 Details of Service Mode

iPF8000

This section provides details of the Service mode menu.

#### a) DISPLAY

Displays and prints the printer information.

##### 1) PRINF INF

Prints adjustment values in the User menu, [DISPLAY] and [COUNTER] parameters on A4-size or larger paper. When roll media is used, the layout is optimized according to the media width.

##### 2) SYSTEM

Displays the printer information shown below.

T-7-34

Display	Description	Unit
S/N	Serial number of printer	-
TYPE	Type setting on main controller PCB * iPF8100/8000S/8000 is represented by 44.	-
LF TYPE	Feed roller type: 0 or 1	-
TMP	Ambient temperature	degrees C
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	mm
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	inch
SIZE CR	Detected size of loaded media (carriage scan direction)	mm
SIZE CR	Detected size of loaded media (carriage scan direction)	inch

##### 3) HEAD

Displays the following EEPROM information of the printhead.

T-7-35

Display	Description
S/N R	Serial number of printhead R
S/N L	Serial number of printhead L
LOT R	Lot number of printhead R
LOT L	Lot number of printhead L

##### 4) INK

Displays the numbers of days passed since installation of the following ink tanks.

T-7-36

Display	Description	Unit
BK	Number of days passed since the BK ink tank was installed	Day(s)
MBK	Number of days passed since the MBK ink tank was installed	Day(s)
C	Number of days passed since the C ink tank was installed	Day(s)
M	Number of days passed since the M ink tank was installed	Day(s)
Y	Number of days passed since the Y ink tank was installed	Day(s)
PC	Number of days passed since the PC ink tank was installed	Day(s)
PM	Number of days passed since the PM ink tank was installed	Day(s)
GY	Number of days passed since the GY ink tank was installed	Day(s)
PGY	Number of days passed since the PGY ink tank was installed	Day(s)
R	Number of days passed since the R ink tank was installed	Day(s)
G	Number of days passed since the G ink tank was installed	Day(s)
B	Number of days passed since the B ink tank was installed	Day(s)

##### 5) WARNING

Displays the warning history (up to 20 events). The newest event has the smallest history number.

##### 6) ERROR

Displays the error history (up to 20 events). The newest event has the smallest history number.

##### 7) INK CHECK

Displays the number of times the remaining ink level detection function was turned off, to accommodate refilled ink cartridges in the order of Y, PC, C, PGY, GY, MBK, PM, M, BK, R, G, and B.

0: Never

1: Executed at least once

### b) I/O DISPLAY

The status of each sensor and switch is shown in the display.

Sensor and switch status is shown in the display.

ON = 1

OFF or not used = 0

Screen 1

T-7-37

[illegible]

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 (Display position)

Screen 2

[illegible]

17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 (Display position)

Screens 1 and 2 are selectable with the [◀] and [▶] buttons.

These screens display the associated sensor status as listed in the table below.

T-7-39

Display position	Sensor name	LCD display contents
1	Pump Cam Sensor	0: Sensor ON , 1: Sensor OFF
2	Valve open/closed detection sensor (R)	0: Sensor ON , 1: Sensor OFF
3	Agitation cam sensor (L)	0: Sensor ON , 1: Sensor OFF
4	Agitation cam sensor (R)	0: Sensor ON , 1: Sensor OFF
5	(Not Used)	-
6	Lift cam sensor	0: Sensor ON , 1: Sensor OFF
7	Feed roller HP sensor	0: Sensor ON , 1: Sensor OFF
8	Upper cover lock switch	0: Cover open , 1: Cover close
9	Carriage cover sensor	0: Cover open , 1: Cover close
10	Ink tank cover switch (R)	0: Cover open , 1: Cover close
11	Ink tank cover switch (L)	0: Cover open , 1: Cover close
12	(Not Used)	-
13	(Not Used)	-
14	(Not Used)	-
15	(Not Used)	-
16	(Not Used)	-
17	(Not Used)	-
18	(Not Used)	-
19	(Not Used)	-
20	(Not Used)	-
21	(Not Used)	-
22	Carriage HP sensor	0: Sensor ON , 1: Sensor OFF
23	Pressure release switch	0: Released , 1: Pressured
24	Media sensor	0: No media , 1: Media loaded
25	(Not Used)	-
26	(Not Used)	-
27	(Not Used)	-
28	Media take-up unit detection	0: Undetected 1: Detected
29	Media take-up sensor input signal	0: LO , 1: HI
30	Valve open/closed detection sensor (L)	0: Sensor ON , 1: Sensor OFF
31	(Not Used)	-
32	(Not Used)	-

**c) ADJUST**

Performs adjustments and prints the adjustment and check patterns necessary for adjusting the printer parts.

**1) PRINT PATTERN**

T-7-40

Display	Description
NOZZLE 1	Prints the nozzle check pattern by single direction/ single pass without using the non-discharging back up. It is used to check for the non-discharging nozzles. - Media size: A4 - Media type: any
OPTICAL AXIS	Prints the pattern and adjusts the optical axis of the multi sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the carriage unit or multi sensor". - Media type: photo glossy paper
LF TUNING	Carry out automatic correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".
LF TUNING 2	Carry out manual correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".
SENSOR CHECK	* For Factory

SENSOR CHECK are intended for factory adjustment purposes.  
No adjustment by service personnel is required.

**2) HEAD ADJ.**

Set or initialize the registration adjustment values of each printheads.

T-7-41

Display			Description
AUTO HEAD ADJ	ROUGH		Prints the pattern for auto head adjustment (rough adjustment).
MANUAL HEAD ADJ	DETAIL		Prints the detail patterns for the manual head adjustment. After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
	BASIC		Prints the basic patterns for the manual head adjustment. After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
ADJ. SETTING	A to F	A-1 to F-1	This mode is to input the registration adjustment values. It is possible to return the values to the former one by printing the status print before changing the value.
	SAVE SETTINGS		Save the registration adjustment values that has been input.
RESET SETTINGS			Initialize the registration adjustment values (to 0).

**3) NOZZLE CHK POS.**

This mode is for adjusting the optical axis of the head management sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the head management sensor".

**4) GAP CLIB.**

This mode measures the gap between the printhead and media by using the multi sensor and corrects the calibration value.

**5) CHANGE LF TYPE**

Change the type of the feed roller.

0: Old feed roller

1: New feed roller

**d) REPLACE****1) CUTTER**

This mode is for replacing the cutter unit.

**e) COUNTER**

Displays the life (operation frequency and time) of each unit, print counts for each media type, and else.  
The count values can be printed from [PRINT INF].

**1) PRINTER: Counters related to product life**

T-7-42

Display	Description	Unit
LIFE TTL	Cumulative number of printed media (equivalent of A4)	sheets
LIFE ROLL	Cumulative number of printed roll media (equivalent of A4)	sheets
LIFE CUTSHEET	Cumulative number of printed cut sheets (equivalent to A4)	sheets
LIFE A-F	Cumulative number of printed media for environments A to F	sheets
POWER ON	Cumulative power-on time (excluding the sleep time)	Hours
W-INK	Remaining capacity of the maintenance cartridge	%
CUTTER	Number of cutting operations (count as 1 by moving back and forth)	Times
WIPE	Number of wiping operations	Times

**2) CARRIAGE: Counters related to carriage unit**

T-7-43

Display	Description	Unit
PRINT	Cumulative printing time	Hours
DRIVE	Cumulative carriage moving time	Hours
CR COUNT	Cumulative carriage scan count (count as 1 by moving back and forth)	Times
CR DIST.	Cumulative carriage scan distance (count as 1 by moving 210mm)	Times
PRINT COUNT	Cumulative print end count (count as 1 by capping)	Times

**3) PURGE: Counters related to purge unit**

T-7-44

Display	Description	Unit
CLN-A-1	Cumulative number of automatic cleaning 1 (normal suction) operations	Times
CLN-A-2	Cumulative number of automatic cleaning 2 (ink level adjusting) operations	Times
CLN-A-3	Cumulative number of automatic cleaning 3 (initial filling) operations	Times
CLN-A-6	Cumulative number of automatic cleaning 6 (strong normal suction) operations	Times
CLN-A-7	Cumulative number of automatic cleaning 7 (aging) operations	
CLN-A-10	Cumulative number of automatic cleaning 10 (ink filling after secondary transportation) operations	Times
CLN-A-11	Cumulative number of automatic cleaning 11 (ink filling after head replacement) operations	Times
CLN-A-15	Cumulative number of automatic cleaning 15 (dot count small suction) operations	Times
CLN-A-16	Cumulative number of automatic cleaning 16 (sedimented ink agitation) operations	Times
CLN-A-17	Cumulative number of automatic cleaning 17 (small suction) operations	Times
CLN-A-TTL	Total number of automatic cleaning operations	Times
CLN-M-1	Cumulative number of manual cleaning 1 (normal suction) operations	Times
CLN-M-4	Cumulative number of manual cleaning 4 (ink draining from head after head replacement) operations	Times
CLN-M-5	Cumulative number of manual cleaning 5 (ink draining from head and tube before transportation ) operations	Times
CLN-M-6	Cumulative number of manual cleaning 6 (normal strong suction) operations	Times
CLN-M-TTL	Total number of manual cleaning operations	Times

## 4) CLEAR: Counters related to counter initialization

T-7-45

Display	Description	Unit
CLR-INK CONSUME	Cumulative count of ink section consumption amount clearing	Times
CLR-CUTTER EXC.	Cumulative count of cutter replacement count clearing	Times
CLR-MTC EXC.	Cumulative count of maintenance cartridge replacement count clearing	Times
CLR-HEAD L EXC.	Cumulative count of printhead L replacement count clearing	Times
CLR-HEAD R EXC.	Cumulative count of printhead R replacement count clearing	Times
CLR-UNIT A EXC.	Cumulative count of unit A(waste ink system) replacement count clearing	Times
CLR-UNIT D EXC.	Cumulative count of unit D(carriage unit) replacement count clearing	Times
CLR-UNIT H EXC.	Cumulative count of unit H(purge unit) replacement count clearing	Times
CLR-UNIT K EXC.	Cumulative count of unit K(head management sensor) replacement count clearing	Times
CLR-UNIT M EXC.	Cumulative count of unit M(carriage motor) replacement count clearing	Times
CLR-UNIT P EXC.	Cumulative count of unit P(feed motor) replacement count clearing	Times
CLR-UNIT V EXC.	Cumulative count of unit V(mist fan unit) replacement count clearing	Times
CLR-FACTORY CNT.	For factory	Times

## 5) EXCHANGE: Counters related to parts replacement

T-7-46

Display	Description	Unit
CUTTER EXC.	Cutter replacement count (Count of executing cutter replacement mode)	Times
MTC EXC.	Maintenance cartridge replacement count	Times
HEAD R EXC.	Printhead R replacement count	Times
HEAD L EXC.	Printhead L replacement count	Times
BOARD EXC.(M/B)	Main controller PCB replacement count	Times
UNIT A EXC.	Unit A (waste ink system) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS A])	Times
UNIT D EXC.	Unit D (carriage unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS D])	Times
UNIT H EXC.	Unit H (purge unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS H])	Times
UNIT K EXC.	Unit K (head management sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS K])	Times
UNIT M EXC.	Unit M (carriage unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS M])	Times
UNIT P EXC.	Unit P (feed motor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS P])	Times
UNIT V EXC.	Unit V (mist fan unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS V])	Times

## 6) DETAIL-CNT: Other counters

T-7-47

Display		Description	Unit
MOVE PRINTER	A(B,C,D,E)	A: Number of times "MOVE PRINTER" on Main menu is executed B: Number of times "LEVEL 1" is executed C: Number of times "LEVEL 2" is executed D: Number of times "LEVEL 3" is executed E: "LEVEL" of previously executed "MOVE PRINTER"	Times
N-INKCHK(XX)		XX: Ink color Count of turning off the ink remaining level detection for each color	Times
MEDIACONFIG-CNT		Count of media registered by media editor	Times

## 7) INK-USE1: Counters related to ink consumption

T-7-48

Display	Description	Unit
INK-USE1(XX)	XX: Ink color Cumulative consumption amount of generic ink	ml
INK-USE1(TTL)	Total amount of cumulative consumption of generic ink	ml
N-INK-USE1(XX)	XX: Ink color Cumulative consumption amount of refilled ink	ml
N-INK-USE1(TTL)	Total amount of cumulative consumption of refilled ink	ml

## 8) INK-USE2: Counters related to ink consumption

T-7-49

Display	Description	Unit
INK-USE2(XX)	XX: Ink color Consumption amount of generic ink of the currently installed ink tank.	ml
INK-USE2(TTL)	Total consumption amount of generic ink of the currently installed ink tanks	ml
N-INK-USE2(XX)	XX: Ink color Consumption amount of refilled ink of the currently installed ink tank	ml
N-INK-USE2(TTL)	Total consumption amount of refilled ink of the currently installed ink tanks	ml

## 9) INK-EXC: Counters related to ink tank replacement

T-7-50

Display	Description	Unit
INK-EXC(XX)	XX: Ink color Cumulative count of generic ink tank replacement	ml
INK-EXC(TTL)	Total amount of cumulative count of generic ink tank replacement	ml
N-INK-EXC(XX)	XX: Ink color Cumulative count of refilled ink tank replacement	ml
N-INK-EXC(TTL)	Total amount of cumulative count of refilled ink tank replacement	ml

## 10) MEDIA x (x: 1 to 7): Counters related to media

One to seven media types are displayed individually in order with large cumulative print area.

T-7-51

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	m2
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	m2
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	m2
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 11) MEDIA OTHER: Counters related to media

Displays the total amount of cumulative print area of the other media type than the above-mentioned

T-7-52

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	m2
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	m2
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	m2
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 12) MEDIASIZE1 ROLL: Counters related to roll media printing

T-7-53

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 13) MEDIASIZE2 ROLL: Counters related to roll media printing

T-7-54

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 14) MEDIASIZE1 CUT: Counters related to cut sheet printing

T-7-55

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 15) MEDIASIZE2 CUT: Counters related to cut sheet printing

T-7-56

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 16) HEAD DOT CNT.1: Counter related to dot count

T-7-57

Display	Description	Unit
XX	XX: Ink color Dot counts of each colors of the currently installed printhead	(x 1,000,000) dots
TTL	Total dot counts of each colors of the currently installed printhead	(x 1,000,000) dots

## 17) HEAD DOT CNT.2: Counter related to dot count

T-7-58

Display	Description	Unit
XX	XX: Ink color Cumulative dot counts of each colors	(x 1,000,000) dots
TTL	Total cumulative dot counts of each colors	(x 1,000,000) dots

## 18) PARTS CNT. : Counter related to consumable parts

T-7-59

Display	Description	Unit
COUNTER x	<p>x: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" &gt; "Consumable Parts")</p> <p>Display the status and the days passed since the counter resetting.</p> <p>- Status</p> <p>OK: Use rate (until part replacement) of all consumable parts included in each unit are below 90%.</p> <p>W1: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 90% or more.</p> <p>W2: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, but no need to stop the printer.</p> <p>E : Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, and the printer needs to be stopped.</p>	Day(s)
PARTS yy	<p>1: yy: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" &gt; "Consumable Parts") Counter of the consumable part (current)</p> <p>2: Life of the consumable part</p> <p>3: Use rate until part replacement</p> <p>4: Counter of the consumable part (accumulate)</p>	%

**f) SETTING**

Make various settings.

## 1) Pth

Turn on or off the head pulse rank control function.

Default: OFF

## 2) RTC

Set RTC (real time clock) after replacing the lithium battery on the main controller PCB.

T-7-60

Display		Description
DATE	yyyy/mm/dd	Set date
TIME	hh:mm	Set time

## 3) PV AUTO JUDGE

Sets ink saver mode.

Default: OFF

**g) INITIALIZE**

Clear the [DISPLAY] histories, [ADJUST] settings, [COUNTER] values, and other parameters.

T-7-61

Display		Description
WARNING		Initialize the history of WARNING. (All displayed contents of [DISPLAY] > [WARNING] will be initialized.)
ERROR		Initialize the history of ERROR. (All displayed contents of [DISPLAY] > [ERROR] will be initialized.)
ADJUST		Initialize the value of band adjustment (by user) and head adjustment. The automatically adjusted value will not be initialized.
W-INK		Initialize the remaining capacity (%) of the maintenance cartridge. (Clear [COUNTER] > [PRINTER] > [W-INK])
CARRIAGE		Initialize the counter related to carriage unit. (Clear [COUNTER] > [CARRIAGE])
PURGE		Initialize the counter related to purge unit. (Clear [COUNTER] > [PURGE])
INK-USE CNT		Initialize the consumption amount of ink. (Clear [COUNTER] > [INK-USE2], and count up [COUNTER] > [CLEAR] > [CLR-INK CONSUME])
CUTTER-CHG CNT		Initialize the cutter unit replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [CUTTER EXC.], and count up [COUNTER] > [CLEAR] > [CLR-CUTTER EXC.])
W-INK-CHG CNT		Initialize the maintenance cartridge replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [MTC EXC.], and count up [COUNTER] > [CLEAR] > [CLR-MTC EXC.])
HEAD-CHG R CNT		Initialize the printhead R replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD R EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD R EXC.])
HEAD-CHG L CNT		Initialize the printhead L replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD L EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD L EXC.])
HDD BOX PASS.		Initialize the BOX password of the hard disk drive to factory default.
PARTS-CHG CNT	PARTS xx	xx: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the consumable part replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [UNIT x EXC], and count up [COUNTER] > [CLEAR] > [CLR-UNIT x EXC.])
PARTS COUNTER	PARTS xx	xx: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the counter amount of the consumable parts. (Clear [COUNTER] > [PARTS CNT.] > [PARTS x]) * After replacing the consumable part, be sure to execute this menu.

## 7.1.9 Details of Service Mode

iPF8000S

This section provides details of the Service mode menu.

### a) DISPLAY

Displays and prints the printer information.

#### 1) PRINF INF

Prints adjustment values in the User menu, [DISPLAY] and [COUNTER] parameters on A4-size or larger paper. When roll media is used, the layout is optimized according to the media width.

#### 2) SYSTEM

Displays the printer information shown below.

T-7-62

Display	Description	Unit
S/N	Serial number of printer	-
TYPE	Type setting on main controller PCB * iPF8100/8000S/8000 is represented by 44.	-
LF TYPE	Feed roller type: 0 or 1	-
TMP	Ambient temperature	degrees C
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	mm
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	inch
SIZE CR	Detected size of loaded media (carriage scan direction)	mm
SIZE CR	Detected size of loaded media (carriage scan direction)	inch

#### 3) HEAD

Displays the following EEPROM information of the printhead.

T-7-63

Display	Description
S/N R	Serial number of printhead R
S/N L	Serial number of printhead L
LOT R	Lot number of printhead R
LOT L	Lot number of printhead L

#### 4) INK

Displays the numbers of days passed since installation of the following ink tanks.

T-7-64

Display	Description	Unit
BK	Number of days passed since the BK ink tank was installed	Day(s)
MBK	Number of days passed since the MBK ink tank was installed	Day(s)
C	Number of days passed since the C ink tank was installed	Day(s)
M	Number of days passed since the M ink tank was installed	Day(s)
Y	Number of days passed since the Y ink tank was installed	Day(s)
PC	Number of days passed since the PC ink tank was installed	Day(s)
PM	Number of days passed since the PM ink tank was installed	Day(s)
GY	Number of days passed since the GY ink tank was installed	Day(s)

#### 5) WARNING

Displays the warning history (up to 20 events). The newest event has the smallest history number.

#### 6) ERROR

Displays the error history (up to 20 events). The newest event has the smallest history number.

#### 7) INK CHECK

Displays the number of times the remaining ink level detection function was turned off, to accommodate refilled ink cartridges in the order of PC, C, PM, Y, GY, BK, MBK, and M.

0: Never

1: Executed at least once

**c) ADJUST**

Performs adjustments and prints the adjustment and check patterns necessary for adjusting the printer parts.

**1) PRINT PATTERN**

T-7-68

Display	Description
NOZZLE 1	Prints the nozzle check pattern by single direction/ single pass without using the non-discharging back up. It is used to check for the non-discharging nozzles. - Media size: A4 - Media type: any
OPTICAL AXIS	Prints the pattern and adjusts the optical axis of the multi sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the carriage unit or multi sensor". - Media type: photo glossy paper
LF TUNING	Carry out automatic correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".
LF TUNING 2	Carry out manual correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".
SENSOR CHECK	* For Factory

SENSOR CHECK are intended for factory adjustment purposes.  
No adjustment by service personnel is required.

**2) HEAD ADJ.**

Set or initialize the registration adjustment values of each printheads.

T-7-69

Display		Description
AUTO HEAD ADJ	ROUGH	Prints the pattern for auto head adjustment (rough adjustment).
MANUAL HEAD ADJ	DETAIL	Prints the detail patterns for the manual head adjustment. After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
	BASIC	Prints the basic patterns for the manual head adjustment. After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
ADJ. SETTING	A to F	This mode is to input the registration adjustment values. It is possible to return the values to the former one by printing the status print before changing the value.
	A-1 to F-1	
	SAVE SETTINGS	Save the registration adjustment values that has been input.
RESET SETTINGS		Initialize the registration adjustment values (to 0).

**3) NOZZLE CHK POS.**

This mode is for adjusting the optical axis of the head management sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the head management sensor".

**4) GAP CLIB.**

This mode measures the gap between the printhead and media by using the multi sensor and corrects the calibration value.

**5) CHANGE LF TYPE**

Change the type of the feed roller.

- 0: Old feed roller
- 1: New feed roller

**d) REPLACE****1) CUTTER**

This mode is for replacing the cutter unit.

**e) COUNTER**

Displays the life (operation frequency and time) of each unit, print counts for each media type, and else. The count values can be printed from [PRINT INF].

**1) PRINTER: Counters related to product life**

T-7-70

Display	Description	Unit
LIFE TTL	Cumulative number of printed media (equivalent of A4)	sheets
LIFE ROLL	Cumulative number of printed roll media (equivalent of A4)	sheets
LIFE CUTSHEET	Cumulative number of printed cut sheets (equivalent to A4)	sheets
LIFE A-F	Cumulative number of printed media for environments A to F	sheets
POWER ON	Cumulative power-on time (excluding the sleep time)	Hours
W-INK	Remaining capacity of the maintenance cartridge	%
CUTTER	Number of cutting operations (count as 1 by moving back and forth)	Times
WIPE	Number of wiping operations	Times

**2) CARRIAGE: Counters related to carriage unit**

T-7-71

Display	Description	Unit
PRINT	Cumulative printing time	Hours
DRIVE	Cumulative carriage moving time	Hours
CR COUNT	Cumulative carriage scan count (count as 1 by moving back and forth)	Times
CR DIST.	Cumulative carriage scan distance (count as 1 by moving 210mm)	Times
PRINT COUNT	Cumulative print end count (count as 1 by capping)	Times

**3) PURGE: Counters related to purge unit**

T-7-72

Display	Description	Unit
CLN-A-1	Cumulative number of automatic cleaning 1 (normal suction) operations	Times
CLN-A-2	Cumulative number of automatic cleaning 2 (ink level adjusting) operations	Times
CLN-A-3	Cumulative number of automatic cleaning 3 (initial filling) operations	Times
CLN-A-6	Cumulative number of automatic cleaning 6 (strong normal suction) operations	Times
CLN-A-7	Cumulative number of automatic cleaning 7 (aging) operations	
CLN-A-10	Cumulative number of automatic cleaning 10 (ink filling after secondary transportation) operations	Times
CLN-A-11	Cumulative number of automatic cleaning 11 (ink filling after head replacement) operations	Times
CLN-A-15	Cumulative number of automatic cleaning 15 (dot count small suction) operations	Times
CLN-A-16	Cumulative number of automatic cleaning 16 (sedimented ink agitation) operations	Times
CLN-A-17	Cumulative number of automatic cleaning 17 (small suction) operations	Times
CLN-A-TTL	Total number of automatic cleaning operations	Times
CLN-M-1	Cumulative number of manual cleaning 1 (normal suction) operations	Times
CLN-M-4	Cumulative number of manual cleaning 4 (ink draining from head after head replacement) operations	Times
CLN-M-5	Cumulative number of manual cleaning 5 (ink draining from head and tube before transportation ) operations	Times
CLN-M-6	Cumulative number of manual cleaning 6 (normal strong suction) operations	Times
CLN-M-TTL	Total number of manual cleaning operations	Times

## 4) CLEAR: Counters related to counter initialization

T-7-73

Display	Description	Unit
CLR-INK CONSUME	Cumulative count of ink section consumption amount clearing	Times
CLR-CUTTER EXC.	Cumulative count of cutter replacement count clearing	Times
CLR-MTC EXC.	Cumulative count of maintenance cartridge replacement count clearing	Times
CLR-HEAD L EXC.	Cumulative count of printhead L replacement count clearing	Times
CLR-HEAD R EXC.	Cumulative count of printhead R replacement count clearing	Times
CLR-UNIT A EXC.	Cumulative count of unit A(waste ink system) replacement count clearing	Times
CLR-UNIT D EXC.	Cumulative count of unit D(carriage unit) replacement count clearing	Times
CLR-UNIT H EXC.	Cumulative count of unit H(purge unit) replacement count clearing	Times
CLR-UNIT K EXC.	Cumulative count of unit K(head management sensor) replacement count clearing	Times
CLR-UNIT M EXC.	Cumulative count of unit M(carriage motor) replacement count clearing	Times
CLR-UNIT P EXC.	Cumulative count of unit P(feed motor) replacement count clearing	Times
CLR-UNIT V EXC.	Cumulative count of unit V(mist fan unit) replacement count clearing	Times
CLR-UNIT X EXC.	Cumulative count of unit X(multi sensor) replacement count clearing	Times
CLR-FACTORY CNT.	For factory	Times

## 5) EXCHANGE: Counters related to parts replacement

T-7-74

Display	Description	Unit
CUTTER EXC.	Cutter replacement count (Count of executing cutter replacement mode)	Times
MTC EXC.	Maintenance cartridge replacement count	Times
HEAD R EXC.	Printhead R replacement count	Times
HEAD L EXC.	Printhead L replacement count	Times
BOARD EXC.(M/B)	Main controller PCB replacement count	Times
UNIT A EXC.	Unit A (waste ink system) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS A])	Times
UNIT D EXC.	Unit D (carriage unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS D])	Times
UNIT H EXC.	Unit H (purge unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS H])	Times
UNIT K EXC.	Unit K (head management sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS K])	Times
UNIT M EXC.	Unit M (carriage unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS M])	Times
UNIT P EXC.	Unit P (feed motor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS P])	Times
UNIT V EXC.	Unit V (mist fan unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS V])	Times
UNIT X EXC.	Unit X (multi sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS X])	Times

## 6) DETAIL-CNT: Other counters

T-7-75

Display	Description	Unit
MOVE PRINTER A(B,C,D,E)	A: Number of times "MOVE PRINTER" on Main menu is executed B: Number of times "LEVEL 1" is executed C: Number of times "LEVEL 2" is executed D: Number of times "LEVEL 3" is executed E: "LEVEL" of previously executed "MOVE PRINTER"	Times
N-INKCHK(XX)	XX: Ink color Count of turning off the ink remaining level detection for each color	Times
MEDIACONFIG-CNT	Count of media registered by media editor	Times

## 7) INK-USE1: Counters related to ink consumption

T-7-76

Display	Description	Unit
INK-USE1(XX)	XX: Ink color Cumulative consumption amount of generic ink	ml
INK-USE1(TTL)	Total amount of cumulative consumption of generic ink	ml
N-INK-USE1(XX)	XX: Ink color Cumulative consumption amount of refilled ink	ml
N-INK-USE1(TTL)	Total amount of cumulative consumption of refilled ink	ml

## 8) INK-USE2: Counters related to ink consumption

T-7-77

Display	Description	Unit
INK-USE2(XX)	XX: Ink color Consumption amount of generic ink of the currently installed ink tank.	ml
INK-USE2(TTL)	Total consumption amount of generic ink of the currently installed ink tanks	ml
N-INK-USE2(XX)	XX: Ink color Consumption amount of refilled ink of the currently installed ink tank	ml
N-INK-USE2(TTL)	Total consumption amount of refilled ink of the currently installed ink tanks	ml

## 9) INK-EXC: Counters related to ink tank replacement

T-7-78

Display	Description	Unit
INK-EXC(XX)	XX: Ink color Cumulative count of generic ink tank replacement	ml
INK-EXC(TTL)	Total amount of cumulative count of generic ink tank replacement	ml
N-INK-EXC(XX)	XX: Ink color Cumulative count of refilled ink tank replacement	ml
N-INK-EXC(TTL)	Total amount of cumulative count of refilled ink tank replacement	ml

## 10) MEDIA x (x: 1 to 7): Counters related to media

One to seven media types are displayed individually in order with large cumulative print area.

T-7-79

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	m2
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	m2
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	m2
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 11) MEDIA OTHER: Counters related to media

Displays the total amount of cumulative print area of the other media type than the above-mentioned

T-7-80

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	m2
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	m2
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	m2
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 12) MEDIASIZE1 ROLL: Counters related to roll media printing

T-7-81

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 13) MEDIASIZE2 ROLL: Counters related to roll media printing

T-7-82

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 14) MEDIASIZE1 CUT: Counters related to cut sheet printing

T-7-83

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 15) MEDIASIZE2 CUT: Counters related to cut sheet printing

T-7-84

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 16) HEAD DOT CNT.1: Counter related to dot count

T-7-85

Display	Description	Unit
XX	XX: Ink color Dot counts of each colors of the currently installed printhead	(x 1,000,000) dots
TTL	Total dot counts of each colors of the currently installed printhead	(x 1,000,000) dots

## 17) HEAD DOT CNT.2: Counter related to dot count

T-7-86

Display	Description	Unit
XX	XX: Ink color Cumulative dot counts of each colors	(x 1,000,000) dots
TTL	Total cumulative dot counts of each colors	(x 1,000,000) dots

## 18) PARTS CNT. : Counter related to consumable parts

T-7-87

Display		Description	Unit
COUNTER x		x: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" > "Consumable Parts")  Display the status and the days passed since the counter resetting. - Status OK: Use rate (until part replacement) of all consumable parts included in each unit are below 90%. W1: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 90% or more. W2: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, but no need to stop the printer. E : Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, and the printer needs to be stopped.	Day(s)
	PARTS yy	1: yy: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" > "Consumable Parts") Counter of the consumable part (current)	
		2: Life of the consumable part	
		3: Use rate until part replacement	%
		4: Counter of the consumable part (accumulate)	

**f) SETTING**

Make various settings.

## 1) Pth

Turn on or off the head pulse rank control function.

Default: OFF

## 2) RTC

Set RTC (real time clock) after replacing the lithium battery on the main controller PCB.

T-7-88

Display		Description
DATE	yyyy/mm/dd	Set date
TIME	hh:mm	Set time

## 3) PV AUTO JUDGE

Sets ink saver mode.

Default: OFF

**g) INITIALIZE**

Clear the [DISPLAY] histories, [ADJUST] settings, [COUNTER] values, and other parameters.

T-7-89

Display		Description
WARNING		Initialize the history of WARNING. (All displayed contents of [DISPLAY] > [WARNING] will be initialized.)
ERROR		Initialize the history of ERROR. (All displayed contents of [DISPLAY] > [ERROR] will be initialized.)
ADJUST		Initialize the value of band adjustment (by user) and head adjustment. The automatically adjusted value will not be initialized.
W-INK		Initialize the remaining capacity (%) of the maintenance cartridge. (Clear [COUNTER] > [PRINTER] > [W-INK])
CARRIAGE		Initialize the counter related to carriage unit. (Clear [COUNTER] > [CARRIAGE])
PURGE		Initialize the counter related to purge unit. (Clear [COUNTER] > [PURGE])
INK-USE CNT		Initialize the consumption amount of ink. (Clear [COUNTER] > [INK-USE2], and count up [COUNTER] > [CLEAR] > [CLR-INK CONSUME])
CUTTER-CHG CNT		Initialize the cutter unit replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [CUTTER EXC.], and count up [COUNTER] > [CLEAR] > [CLR-CUTTER EXC.])
W-INK-CHG CNT		Initialize the maintenance cartridge replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [MTC EXC.], and count up [COUNTER] > [CLEAR] > [CLR-MTC EXC.])
HEAD-CHG R CNT		Initialize the printhead R replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD R EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD R EXC.])
HEAD-CHG L CNT		Initialize the printhead L replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD L EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD L EXC.])
HDD BOX PASS.		Initialize the BOX password of the hard disk drive to factory default.
PARTS-CHG CNT	PARTS xx	xx: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the consumable part replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [UNIT x EXC], and count up [COUNTER] > [CLEAR] > [CLR-UNIT x EXC.])
PARTS COUNTER	PARTS xx	xx: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the counter amount of the consumable parts. (Clear [COUNTER] > [PARTS CNT.] > [PARTS x]) * After replacing the consumable part, be sure to execute this menu.

## 7.1.10 Details of Service Mode

iPF8100

This section provides details of the Service mode menu.

### a) DISPLAY

Displays and prints the printer information.

#### 1) PRINF INF

Prints adjustment values in the User menu, [DISPLAY] and [COUNTER] parameters on A4-size or larger paper. When roll media is used, the layout is optimized according to the media width.

#### 2) SYSTEM

Displays the printer information shown below.

T-7-90

Display	Description	Unit
S/N	Serial number of printer	-
TYPE	Type setting on main controller PCB * iPF8100/8000S/8000 is represented by 44.	-
LF TYPE	Feed roller type: 0 or 1	-
TMP	Ambient temperature	degrees C
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	mm
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	inch
SIZE CR	Detected size of loaded media (carriage scan direction)	mm
SIZE CR	Detected size of loaded media (carriage scan direction)	inch

#### 3) HEAD

Displays the following EEPROM information of the printhead.

T-7-91

Display	Description
S/N R	Serial number of printhead R
S/N L	Serial number of printhead L
LOT R	Lot number of printhead R
LOT L	Lot number of printhead L

#### 4) INK

Displays the numbers of days passed since installation of the following ink tanks.

T-7-92

Display	Description	Unit
BK	Number of days passed since the BK ink tank was installed	Day(s)
MBK	Number of days passed since the MBK ink tank was installed	Day(s)
C	Number of days passed since the C ink tank was installed	Day(s)
M	Number of days passed since the M ink tank was installed	Day(s)
Y	Number of days passed since the Y ink tank was installed	Day(s)
PC	Number of days passed since the PC ink tank was installed	Day(s)
PM	Number of days passed since the PM ink tank was installed	Day(s)
GY	Number of days passed since the GY ink tank was installed	Day(s)
PGY	Number of days passed since the PGY ink tank was installed	Day(s)
R	Number of days passed since the R ink tank was installed	Day(s)
G	Number of days passed since the G ink tank was installed	Day(s)
B	Number of days passed since the B ink tank was installed	Day(s)

#### 5) WARNING

Displays the warning history (up to 20 events). The newest event has the smallest history number.

#### 6) ERROR

Displays the error history (up to 20 events). The newest event has the smallest history number.

#### 7) INK CHECK

Displays the number of times the remaining ink level detection function was turned off, to accommodate refilled ink cartridges in the order of Y, PC, C, PGY, GY, BK, PM, M, MBK, R, G, and B.

0: Never

1: Executed at least once

### b) I/O DISPLAY

The status of each sensor and switch is shown in the display.

Sensor and switch status is shown in the display.

$$\text{ON} = 1$$

OFF or not used = 0

Screen 1

T-7-93

[illegible]

1   2   3   4   5   6   7   8   9   10   11   12   13   14   15   16   (Display position)

## Screen 2

T-7-94

[illegible]

17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 (Display position)

Screens 1 and 2 are selectable with the [◀] and [▶] buttons.

These screens display the associated sensor status as listed in the table below.

T-7-95

Display position	Sensor name	LCD display contents
1	Pump Cam Sensor	0: Sensor ON , 1: Sensor OFF
2	Valve open/closed detection sensor (R)	0: Sensor ON , 1: Sensor OFF
3	Agitation cam sensor (L)	0: Sensor ON , 1: Sensor OFF
4	Agitation cam sensor (R)	0: Sensor ON , 1: Sensor OFF
5	(Not Used)	-
6	Lift cam sensor	0: Sensor ON , 1: Sensor OFF
7	Feed roller HP sensor	0: Sensor ON , 1: Sensor OFF
8	Upper cover lock switch	0: Cover open , 1: Cover close
9	Carriage cover sensor	0: Cover open , 1: Cover close
10	Ink tank cover switch (R)	0: Cover open , 1: Cover close
11	Ink tank cover switch (L)	0: Cover open , 1: Cover close
12	(Not Used)	-
13	(Not Used)	-
14	(Not Used)	-
15	(Not Used)	-
16	(Not Used)	-
17	(Not Used)	-
18	(Not Used)	-
19	(Not Used)	-
20	(Not Used)	-
21	(Not Used)	-
22	Carriage HP sensor	0: Sensor ON , 1: Sensor OFF
23	Pressure release switch	0: Realeased , 1: Pressured
24	Media sensor	0: No media , 1: Media loaded
25	(Not Used)	-
26	(Not Used)	-
27	(Not Used)	-
28	Media take-up unit detection	0: Undetected 1: Detected
29	Media take-up sensor input signal	0: LO , 1: HI
30	Valve open/closed detection sensor (L)	0: Sensor ON , 1: Sensor OFF
31	(Not Used)	-
32	(Not Used)	-

**c) ADJUST**

Performs adjustments and prints the adjustment and check patterns necessary for adjusting the printer parts.

**1) PRINT PATTERN**

T-7-96

Display	Description
NOZZLE 1	Prints the nozzle check pattern by single direction/ single pass without using the non-discharging back up. It is used to check for the non-discharging nozzles. - Media size: A4 - Media type: any
OPTICAL AXIS	Prints the pattern and adjusts the optical axis of the multi sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the carriage unit or multi sensor". - Media type: photo glossy paper
LF TUNING	Carry out automatic correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".
LF TUNING 2	Carry out manual correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".
SENSOR CHECK	* For Factory

SENSOR CHECK are intended for factory adjustment purposes.  
No adjustment by service personnel is required.

**2) HEAD ADJ.**

Set or initialize the registration adjustment values of each printheads.

T-7-97

Display			Description
AUTO HEAD ADJ	ROUGH		Prints the pattern for auto head adjustment (rough adjustment).
MANUAL HEAD ADJ	DETAIL		Prints the detail patterns for the manual head adjustment. After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
	BASIC		Prints the basic patterns for the manual head adjustment. After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
ADJ. SETTING	A to F	A-1 to F-1	This mode is to input the registration adjustment values. It is possible to return the values to the former one by printing the status print before changing the value.
	SAVE SETTINGS		Save the registration adjustment values that has been input.
RESET SETTINGS			Initialize the registration adjustment values (to 0).

**3) NOZZLE CHK POS.**

This mode is for adjusting the optical axis of the head management sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the head management sensor".

**4) GAP CLIB.**

This mode measures the gap between the printhead and media by using the multi sensor and corrects the calibration value.

**5) CHANGE LF TYPE**

Change the type of the feed roller.

0: Old feed roller

1: New feed roller

**d) REPLACE****1) CUTTER**

This mode is for replacing the cutter unit.

**e) COUNTER**

Displays the life (operation frequency and time) of each unit, print counts for each media type, and else. The count values can be printed from [PRINT INF].

**1) PRINTER: Counters related to product life**

T-7-98

Display	Description	Unit
LIFE TTL	Cumulative number of printed media (equivalent of A4)	sheets
LIFE ROLL	Cumulative number of printed roll media (equivalent of A4)	sheets
LIFE CUTSHEET	Cumulative number of printed cut sheets (equivalent to A4)	sheets
LIFE A-F	Cumulative number of printed media for environments A to F	sheets
POWER ON	Cumulative power-on time (excluding the sleep time)	Hours
W-INK	Remaining capacity of the maintenance cartridge	%
CUTTER	Number of cutting operations (count as 1 by moving back and forth)	Times
WIPE	Number of wiping operations	Times

**2) CARRIAGE: Counters related to carriage unit**

T-7-99

Display	Description	Unit
PRINT	Cumulative printing time	Hours
DRIVE	Cumulative carriage moving time	Hours
CR COUNT	Cumulative carriage scan count (count as 1 by moving back and forth)	Times
CR DIST.	Cumulative carriage scan distance (count as 1 by moving 210mm)	Times
PRINT COUNT	Cumulative print end count (count as 1 by capping)	Times

**3) PURGE: Counters related to purge unit**

T-7-100

Display	Description	Unit
CLN-A-1	Cumulative number of automatic cleaning 1 (normal suction) operations	Times
CLN-A-2	Cumulative number of automatic cleaning 2 (ink level adjusting) operations	Times
CLN-A-3	Cumulative number of automatic cleaning 3 (initial filling) operations	Times
CLN-A-6	Cumulative number of automatic cleaning 6 (strong normal suction) operations	Times
CLN-A-7	Cumulative number of automatic cleaning 7 (aging) operations	
CLN-A-10	Cumulative number of automatic cleaning 10 (ink filling after secondary transportation) operations	Times
CLN-A-11	Cumulative number of automatic cleaning 11 (ink filling after head replacement) operations	Times
CLN-A-15	Cumulative number of automatic cleaning 15 (dot count small suction) operations	Times
CLN-A-16	Cumulative number of automatic cleaning 16 (sedimented ink agitation) operations	Times
CLN-A-17	Cumulative number of automatic cleaning 17 (small suction) operations	Times
CLN-A-TTL	Total number of automatic cleaning operations	Times
CLN-M-1	Cumulative number of manual cleaning 1 (normal suction) operations	Times
CLN-M-4	Cumulative number of manual cleaning 4 (ink draining from head after head replacement) operations	Times
CLN-M-5	Cumulative number of manual cleaning 5 (ink draining from head and tube before transportation ) operations	Times
CLN-M-6	Cumulative number of manual cleaning 6 (normal strong suction) operations	Times
CLN-M-TTL	Total number of manual cleaning operations	Times

## 4) CLEAR: Counters related to counter initialization

T-7-101

Display	Description	Unit
CLR-INK CONSUME	Cumulative count of ink section consumption amount clearing	Times
CLR-CUTTER EXC.	Cumulative count of cutter replacement count clearing	Times
CLR-MTC EXC.	Cumulative count of maintenance cartridge replacement count clearing	Times
CLR-HEAD L EXC.	Cumulative count of printhead L replacement count clearing	Times
CLR-HEAD R EXC.	Cumulative count of printhead R replacement count clearing	Times
CLR-UNIT A EXC.	Cumulative count of unit A(waste ink system) replacement count clearing	Times
CLR-UNIT D EXC.	Cumulative count of unit D(carriage unit) replacement count clearing	Times
CLR-UNIT H EXC.	Cumulative count of unit H(purge unit) replacement count clearing	Times
CLR-UNIT K EXC.	Cumulative count of unit K(head management sensor) replacement count clearing	Times
CLR-UNIT M EXC.	Cumulative count of unit M(carriage motor) replacement count clearing	Times
CLR-UNIT P EXC.	Cumulative count of unit P(feed motor) replacement count clearing	Times
CLR-UNIT V EXC.	Cumulative count of unit V(mist fan unit) replacement count clearing	Times
CLR-UNIT X EXC.	Cumulative count of unit X(multi sensor) replacement count clearing	Times
CLR-FACTORY CNT.	For factory	Times

## 5) EXCHANGE: Counters related to parts replacement

T-7-102

Display	Description	Unit
CUTTER EXC.	Cutter replacement count (Count of executing cutter replacement mode)	Times
MTC EXC.	Maintenance cartridge replacement count	Times
HEAD R EXC.	Printhead R replacement count	Times
HEAD L EXC.	Printhead L replacement count	Times
BOARD EXC.(M/B)	Main controller PCB replacement count	Times
UNIT A EXC.	Unit A (waste ink system) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS A])	Times
UNIT D EXC.	Unit D (carriage unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS D])	Times
UNIT H EXC.	Unit H (purge unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS H])	Times
UNIT K EXC.	Unit K (head management sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS K])	Times
UNIT M EXC.	Unit M (carriage unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS M])	Times
UNIT P EXC.	Unit P (feed motor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS P])	Times
UNIT V EXC.	Unit V (mist fan unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS V])	Times
UNIT X EXC.	Unit X (multi sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS X])	Times

## 6) DETAIL-CNT: Other counters

T-7-103

Display	Description	Unit
MOVE PRINTER	A(B,C,D,E) A: Number of times "MOVE PRINTER" on Main menu is executed B: Number of times "LEVEL 1" is executed C: Number of times "LEVEL 2" is executed D: Number of times "LEVEL 3" is executed E: "LEVEL" of previously executed "MOVE PRINTER"	Times
N-INKCHK(XX)	XX: Ink color Count of turning off the ink remaining level detection for each color	Times
MEDIACONFIG-CNT	Count of media registered by media editor	Times

## 7) INK-USE1: Counters related to ink consumption

T-7-104

Display	Description	Unit
INK-USE1(XX)	XX: Ink color Cumulative consumption amount of generic ink	ml
INK-USE1(TTL)	Total amount of cumulative consumption of generic ink	ml
N-INK-USE1(XX)	XX: Ink color Cumulative consumption amount of refilled ink	ml
N-INK-USE1(TTL)	Total amount of cumulative consumption of refilled ink	ml

## 8) INK-USE2: Counters related to ink consumption

T-7-105

Display	Description	Unit
INK-USE2(XX)	XX: Ink color Consumption amount of generic ink of the currently installed ink tank.	ml
INK-USE2(TTL)	Total consumption amount of generic ink of the currently installed ink tanks	ml
N-INK-USE2(XX)	XX: Ink color Consumption amount of refilled ink of the currently installed ink tank	ml
N-INK-USE2(TTL)	Total consumption amount of refilled ink of the currently installed ink tanks	ml

## 9) INK-EXC: Counters related to ink tank replacement

T-7-106

Display	Description	Unit
INK-EXC(XX)	XX: Ink color Cumulative count of generic ink tank replacement	ml
INK-EXC(TTL)	Total amount of cumulative count of generic ink tank replacement	ml
N-INK-EXC(XX)	XX: Ink color Cumulative count of refilled ink tank replacement	ml
N-INK-EXC(TTL)	Total amount of cumulative count of refilled ink tank replacement	ml

## 10) MEDIA x (x: 1 to 7): Counters related to media

One to seven media types are displayed individually in order with large cumulative print area.

T-7-107

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	m2
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	m2
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	m2
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 11) MEDIA OTHER: Counters related to media

Displays the total amount of cumulative print area of the other media type than the above-mentioned

T-7-108

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	m2
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	m2
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	m2
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 12) MEDIASIZE1 ROLL: Counters related to roll media printing

T-7-109

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 13) MEDIASIZE2 ROLL: Counters related to roll media printing

T-7-110

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 14) MEDIASIZE1 CUT: Counters related to cut sheet printing

T-7-111

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 15) MEDIASIZE2 CUT: Counters related to cut sheet printing

T-7-112

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 16) HEAD DOT CNT.1: Counter related to dot count

T-7-113

Display	Description	Unit
XX	XX: Ink color Dot counts of each colors of the currently installed printhead	(x 1,000,000) dots
TTL	Total dot counts of each colors of the currently installed printhead	(x 1,000,000) dots

## 17) HEAD DOT CNT.2: Counter related to dot count

T-7-114

Display	Description	Unit
XX	XX: Ink color Cumulative dot counts of each colors	(x 1,000,000) dots
TTL	Total cumulative dot counts of each colors	(x 1,000,000) dots

## 18) PARTS CNT. : Counter related to consumable parts

T-7-115

Display		Description	Unit
COUNTER x		x: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" > "Consumable Parts")  Display the status and the days passed since the counter resetting. - Status OK: Use rate (until part replacement) of all consumable parts included in each unit are below 90%. W1: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 90% or more. W2: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, but no need to stop the printer. E : Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, and the printer needs to be stopped.	Day(s)
	PARTS yy	1: yy: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" > "Consumable Parts") Counter of the consumable part (current)	
		2: Life of the consumable part	
		3: Use rate until part replacement	%
		4: Counter of the consumable part (accumulate)	

**f) SETTING**

Make various settings.

## 1) Pth

Turn on or off the head pulse rank control function.

Default: OFF

## 2) RTC

Set RTC (real time clock) after replacing the lithium battery on the main controller PCB.

T-7-116

Display		Description
DATE	yyyy/mm/dd	Set date
TIME	hh:mm	Set time

## 3) PV AUTO JUDGE

Sets ink saver mode.

Default: OFF

**g) INITIALIZE**

Clear the [DISPLAY] histories, [ADJUST] settings, [COUNTER] values, and other parameters.

T-7-117

Display		Description
WARNING		Initialize the history of WARNING. (All displayed contents of [DISPLAY] > [WARNING] will be initialized.)
ERROR		Initialize the history of ERROR. (All displayed contents of [DISPLAY] > [ERROR] will be initialized.)
ADJUST		Initialize the value of band adjustment (by user) and head adjustment. The automatically adjusted value will not be initialized.
W-INK		Initialize the remaining capacity (%) of the maintenance cartridge. (Clear [COUNTER] > [PRINTER] > [W-INK])
CARRIAGE		Initialize the counter related to carriage unit. (Clear [COUNTER] > [CARRIAGE])
PURGE		Initialize the counter related to purge unit. (Clear [COUNTER] > [PURGE])
INK-USE CNT		Initialize the consumption amount of ink. (Clear [COUNTER] > [INK-USE2], and count up [COUNTER] > [CLEAR] > [CLR-INK CONSUME])
CUTTER-CHG CNT		Initialize the cutter unit replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [CUTTER EXC.], and count up [COUNTER] > [CLEAR] > [CLR-CUTTER EXC.])
W-INK-CHG CNT		Initialize the maintenance cartridge replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [MTC EXC.], and count up [COUNTER] > [CLEAR] > [CLR-MTC EXC.])
HEAD-CHG R CNT		Initialize the printhead R replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD R EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD R EXC.])
HEAD-CHG L CNT		Initialize the printhead L replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD L EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD L EXC.])
HDD BOX PASS.		Initialize the BOX password of the hard disk drive to factory default.
PARTS-CHG CNT	PARTS xx	xx: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the consumable part replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [UNIT x EXC], and count up [COUNTER] > [CLEAR] > [CLR-UNIT x EXC.])
PARTS COUNTER	PARTS xx	xx: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the counter amount of the consumable parts. (Clear [COUNTER] > [PARTS CNT.] > [PARTS x]) * After replacing the consumable part, be sure to execute this menu.

### 7.1.11 Details of Service Mode

iPF8300

This section provides details of the Service mode menu.

#### a) DISPLAY

Displays and prints the printer information.

##### 1) PRINF INF

Prints adjustment values in the User menu, [DISPLAY] and [COUNTER] parameters on A4-size or larger paper. When roll media is used, the layout is optimized according to the media width.

##### 2) SYSTEM

Displays the printer information shown below.

T-7-118

Display	Description	Unit
S/N	Serial number of printer	-
TYPE	Type setting on main controller PCB * iPF8300 are represented by 44".	-
LF TYPE	Feed roller type: 0 or 1	-
TMP	Ambient temperature	centigrade degrees
RH	Ambient humidity	%
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	mm/inch
SIZE CR	Detected size of loaded media (carriage scan direction)	mm/inch
AFTER INST.	Number of days since initial installation	Days

##### 3) HEAD

Displays the following EEPROM information of the printhead.

T-7-119

Display	Description
S/N R	Serial number of printhead R
S/N L	Serial number of printhead L
LOT R	Lot number of printhead R
LOT L	Lot number of printhead L

##### 4) INK

Displays the numbers of days passed since installation of the following ink tanks.

T-7-120

Display	Description	Unit
BK	Number of days passed since the BK ink tank was installed	Day(s)
MBK	Number of days passed since the MBK ink tank was installed	Day(s)
C	Number of days passed since the C ink tank was installed	Day(s)
M	Number of days passed since the M ink tank was installed	Day(s)
Y	Number of days passed since the Y ink tank was installed	Day(s)
PC	Number of days passed since the PC ink tank was installed	Day(s)
PM	Number of days passed since the PM ink tank was installed	Day(s)
GY	Number of days passed since the GY ink tank was installed	Day(s)
PGY	Number of days passed since the PGY ink tank was installed	Day(s)
R	Number of days passed since the R ink tank was installed	Day(s)
G	Number of days passed since the G ink tank was installed	Day(s)
B	Number of days passed since the B ink tank was installed	Day(s)

##### 5) WARNING

Displays the warning history (up to 20 events). The newest event has the smallest history number.

##### 6) ERROR

Displays the error history (up to 20 events). The newest event has the smallest history number.

## 7) JAM

Displays log of jams that have occurred (up to five events). The newest event has the smallest history number.

Indicates the date and time of jam and error code. "0000" is displayed if there is no log.

```

12	Media width	Display media width, *:Unknown
13	Media name	Display media name, *:Unknown

## 8) INK CHECK

Displays the number of times the remaining ink level detection function was turned off, to accommodate refilled ink cartridges in the order of Y, PC, C, PGY, GY, BK, PM, M, MBK, R, G, and B.

0: Never

1: Executed at least once

Screen 1, Screen 2 and Screen 3 are selectable with the ◀ and ▶ keys.  
These screens display the associated sensor status as listed in the table below.

T-7-122

Display position	Sensor name	LCD display contents
1	Pump Cam Sensor	0: Sensor ON , 1: Sensor OFF
2	Valve open/closed detection sensor (R)	0: Sensor ON , 1: Sensor OFF
3	Agitation cam sensor (L)	0: Sensor ON , 1: Sensor OFF
4	Agitation cam sensor (R)	0: Sensor ON , 1: Sensor OFF
5	(Not Used)	-
6	Lift cam sensor	0: Sensor ON , 1: Sensor OFF
7	Feed roller HP sensor	0: Sensor ON , 1: Sensor OFF

**c) ADJUST**

Performs adjustments and prints the adjustment and check patterns necessary for adjusting the printer parts.

**1) PRINT PATTERN**

T-7-123

Display	Description
NOZZLE 1	Prints the nozzle check pattern by single direction/ single pass without using the non-discharging back up. It is used to check for the non-discharging nozzles. - Media size: A4 - Media type: any
OPTICAL AXIS	Prints the pattern and adjusts the optical axis of the multi sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the carriage unit or multi sensor". - Media type: photo glossy paper
LF TUNING	Carry out automatic correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".
LF TUNING 2	Carry out manual correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".

**2) HEAD ADJ.**

Set or initialize the registration adjustment values of each printheads.

T-7-124

Display		Description
MANUAL HEAD ADJ	EXTENSION	Prints the detail patterns for the manual head adjustment at CR SCAN SPEED 2 (25inch/sec [high printing mode]). After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values. Try adjustment in this mode if vertical lines are warped or colors are out of alignment when the printer driver option "High-Precision Printing" or "Priority on dot placement accuracy" is selected.
	DETAIL	Prints the detail patterns for the manual head adjustment at CR SCAN SPEED 3 and 4 (33.3, 40inch/sec). After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values. Try adjustment in this mode if "BASIC" does not improve printing.
	BASIC	Prints the basic patterns for the manual head adjustment at CR SCAN SPEED 1 to 4 (12.5 to 40inch/sec). After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
ADJ. SETTING	A to F	This mode is to input the registration adjustment values. It is possible to return the values to the former one by printing the status print before changing the value.
	A-1 to F-2	
	SAVE SETTINGS	Save the registration adjustment values that has been input.
RESET SETTINGS		Initialize the registration adjustment values (to 0).

**3) NOZZLE CHECK POS.**

This mode is for adjusting the optical axis of the head management sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the head management sensor".

**4) GAP CLIB.**

This mode measures the gap between the printhead and media by using the multi sensor and corrects the calibration value.

**5) CHANGE LF TYPE**

Change the type of the feed roller.

0: Old feed roller

1: New feed roller

6) CR REG

Executes automatic head adjustment.  
Make this adjustment if the resistration remains partially misregistered after user-mode head adjustment.  
EXECUTE: Execute automatic head adjustment.  
RESET: Reset the resistration adjustment value (0).

- Applicable media size is A2 (17inch) or larger.
- Applicable media type is photo glossy paper

If an error message appears when performing CR REG, check the following.  
Replace the multi sensor if the error reoccurs after checking and performing CR REG again.

- <CHECK>
1. Check for non-discharging of the printhead and dirty media, and replace the printhead and/or media if necessary.
  2. Perform [Head Cleaning A].
  3. Perform [Head Posi. Adj.]-[Auto].

7) CR MOTOR COG

Adjust the carriage motor rotation.  
Perform in the following cases:

- When removing/attaching or replacing the carriage or carriage belt.
- When replacing the carriage motor or linear encoder sensor.
- When there is excessive load on the carriage (such as when jamming)

If the following error message appears when performing CR MOTOR COG, check that carriage and carriage belt are installed properly and clean the rail shaft. If the error still occurs, replace the carriage motor.

C	R		V	I	B	R	A	T	I	O	N
E	R	R	O	R							

F-7-9

**d) FUNCTION**

**1) CR UNLOCK**

Unlocks the carriage.

When CR UNLOCK is performed, the carriage lock pin is lowered and the carriage can be moved.

**2) CR LOCK**

Locks the carriage.

When CR LOCK is performed, the carriage lock pin is raised and the carriage is locked.

**3) PG CHECK**

Initializes the purge unit.

**4) CR AUTO SCAN**

The carriage scans.

When CR AUTO SCAN is performed, the carriage scans with the count, width, and speed set with CR SCAN COUNT/CR SCAN SIZE/CR SCAN SPEED.

**5) CR SCAN COUNT**

Sets the number of scans (1 to 30) to be performed with CR AUTO SCAN.

Default:1

**6) CR SCAN SIZE**

Sets the scan width to be performed with CR AUTO SCAN.

1:A4, 2:17inch, 3:24inch, 4:36inch, 5:44inch

Default:5

**7) CR SCAN SPEED**

Sets the speed of the scan to be performed with CR AUTO SCAN.

1:12.5, 2:25.0, 3:33.3, 4:40.0 (Unit: inch/sec)

Default:1

**MEMO:**

The settings made with CR SCAN COUNT, CR SCAN SIZE, CR SCAN SPEED are reset to default when the power is reset.

**8) OPT SENS OUTPUT**

Displays the values (analog value) multi sensor detected from the media.

You can confirm the amount of margin the media has with the values read with the multi sensor and the status of the multi sensor by comparing the values with the threshold.

Press the ◀ key or ▶ key to navigate among OUTPUT 0 to 5 windows.

OUTPUT 0

28	Media edge (regular reflection) platen output (excluding outside light)
29	Media edge (regular reflection) gain
30	-

**MEMO:**

- Displays all "?" if "GAP CALIB" is not performed.
- If the value exceeds 1000, 999 is displayed.

1. Checking "OUTPUT 0" and "OUTPUT 1" when media (excluding clear film) is fed

[Check 1]

Check whether the multi sensor performance has degraded or whether the media is compatible with the multi sensor.

When "Media edge (diffuse reflection) gain" is maximum values and "Media edge (diffuse reflection) media output" is 186 or less, an error occurs.  
Maximum value of "Media edge (diffuse reflection)" gain: 255

When the multi sensor and media are normal, the following values are displayed:

T-7-126

	Media edge (diffuse reflection) gain	Media edge (diffuse reflection) media output
Plain paper	About 10-35	About 500-600
Glossy paper	About 8-25	
Tracing paper	About 30-100	

[Check 2]

Check whether the multi sensor performance has degraded or whether the media is compatible with the multi sensor.

When the difference between "Media edge (diffuse reflection) gain" and "Media edge (diffuse reflection) platen output" is 100 or less, an error occurs.  
When the multi sensor and media are normal, the difference is about 300-600.

[Check 3]

Check the effect of external diffuse light.

When the difference between "Media edge (diffuse reflection) external light output" and "Media edge (diffuse reflection) platen output" is 500 or more, the effect of diffuse light is judged as being great.

When the effect is normal, the difference is about 50-300.

[Check 4]

Check whether the media is compatible.

When the result of "Media edge (regular reflection) gain" is five times as large as the result of "Media edge (diffuse reflection) gain", the media is judged as being incompatible with the multi sensor.

If the media is compatible, the result is about 0.5 to 1.5 times for plain/glossy paper; about 1-3 times for tracing paper.

[Check 5]

Check whether the media is compatible.

When the result of "Media edge (diffuse reflection) gain" is in one of the following, the media may be incompatible with the multi sensor.

- Nine or more times as large as that of plain paper
- Ten or more times as large as that of glossy paper
- Three or more times as large as that of tracing paper

## 2. Checking "OUTPUT 0" when clear film is fed

[Check 1]

Check whether the multi sensor performance has degraded or whether the media is compatible.

When the "Media edge (regular reflection) gain" is maximum values and "Media edge (regular reflection) media output" is 186 or less, an error occurs.

Maximum value of "media edge (regular reflection)" gain: 255

When the multi sensor and media are normal, the following values are displayed:

T-7-127

	Media edge (regular reflection) gain	Media edge (regular reflection) media output
Clear film	About 10-60	About 500-600

[Check 2]

Check whether the multi sensor performance has degraded or whether the media is compatible.

When the difference between "Media edge (regular reflection) gain" and "Media edge (regular reflection) platen output" is 100 or less, an error occurs.

When the multi sensor and media are normal, the difference is about 250-500.

[Check 3]

Check the effect of external diffuse light.

When the difference between "Media edge (regular reflection) external light output" and "Media edge (regular reflection) platen output" is 500 or more, the effect of diffuse light is judged as being great.

When the effect is normal, the difference is about 50-300.

## 3. Checking "OUTPUT 2/OUTPUT 3" and "OUTPUT 4/OUTPUT 5"

[Check 1]

Check whether the multi sensor performance has degraded or whether the media is compatible.

When "GAP gain" is maximum values and "GAP media output" is 93 or less, an error occurs.

Maximum value of "GAP gain": 255

When the multi sensor and media are normal, "GAP gain" is about 30-250.

[Check 2]

Check whether the multi sensor performance has degraded or whether the media is compatible.

When "LED gain" is maximum values and "LED media output" is 168 or less, an error occurs.

Maximum value of "LED gain": 255

When the multi sensor performance and media are normal, "LED gain" is about 5-100.

## 9) NOZZLE CHECK

Checks for non-discharging nozzle with head management sensor.

### 10) NOZZLE INF

Displays the result of non-discharging nozzle check performed with "NOZZLE CHECK" by nozzle row of each ink color.

- Press the ◀ key or ▶ key to switch the ink color.
- AE:A-EVEN row, AO:A-ODD row, BE:B-EVEN row, BO:B-ODD row

C	A	E	:	O	K	A	O	:	O	K
	B	E	:	O	K	B	O	:	O	K

F-7-16

## 11) MEMORY CHK

T-7-128

Display	Description
DDR	Checks the DDR-SDRAM mounted on the Main Controller PCB.
EEP	Checks the EEPROM.

## 12) HEAD CNT CHK

Confirms the contact status of the printhead.

e) **REPLACE**

## 1) L&amp;R PRINTHEADS

Replaces printheads L and R.

f) **COUNTER**

Displays the life (operation frequency and time) of each unit, print counts for each media type, and else.  
The count values can be printed from [PRINT INF].

## 1) PRINTER: Counters related to product life

T-7-129

Display	Description	Unit
LIFE TTL	Cumulative number of printed media (equivalent of A4)	sheets
LIFE ROLL	Cumulative number of printed roll media (equivalent of A4)	sheets
LIFE CUTSHEET	Cumulative number of printed cut sheets (equivalent to A4)	sheets
LIFE A-F	Cumulative number of printed media for environments A to F	sheets
POWER ON	Cumulative power-on time (excluding the sleep time)	Hours
W-INK	Remaining capacity of the maintenance cartridge	%
CUTTER	Number of cutting operations (count as 1 by moving back and forth)	Times
WIPE	Number of wiping operations	Times
SLEEP ON	Cumulative sleep-on time	Hours

## 2) CARRIAGE: Counters related to carriage unit

T-7-130

Display	Description	Unit
PRINT	Cumulative printing time	Hours
DRIVE	Cumulative carriage moving time	Hours
CR COUNT	Cumulative carriage scan count (count as 1 by moving back and forth)	Times
CR DIST.	Cumulative carriage scan distance (count as 1 by moving 210mm)	Times
PRINT COUNT	Cumulative print end count (count as 1 by capping)	Times

## 3) PURGE: Counters related to purge unit

T-7-131

Display	Description	Unit
CLN-A-1	Cumulative number of automatic cleaning 1 (normal suction) operations	Times
CLN-A-2	Cumulative number of automatic cleaning 2 (ink level adjusting) operations	Times
CLN-A-3	Cumulative number of automatic cleaning 3 (initial filling) operations	Times
CLN-A-6	Cumulative number of automatic cleaning 6 (strong normal suction) operations	Times
CLN-A-7	Cumulative number of automatic cleaning 7 (aging) operations	
CLN-A-10	Cumulative number of automatic cleaning 10 (ink filling after secondary transportation) operations	Times
CLN-A-11	Cumulative number of automatic cleaning 11 (ink filling after head replacement) operations	Times
CLN-A-15	Cumulative number of automatic cleaning 15 (dot count small suction) operations	Times
CLN-A-16	Cumulative number of automatic cleaning 16 (sedimented ink agitation) operations	Times
CLN-A-17	Cumulative number of automatic cleaning 17 (small suction) operations	Times
CLN-A-TTL	Total number of automatic cleaning operations	Times
CLN-M-1	Cumulative number of manual cleaning 1 (normal suction) operations	Times
CLN-M-4	Cumulative number of manual cleaning 4 (ink draining from head after head replacement) operations	Times
CLN-M-5	Cumulative number of manual cleaning 5 (ink draining from head and tube before transportation ) operations	Times
CLN-M-6	Cumulative number of manual cleaning 6 (normal strong suction) operations	Times
CLN-M-TTL	Total number of manual cleaning operations	Times

## 4) CLEAR: Counters related to counter initialization

T-7-132

Display	Description	Unit	Remarks
CLR-INK CONSUME	Cumulative count of ink section consumption amount clearing	Times	
CLR-MTC EXC.	Cumulative count of maintenance cartridge replacement count clearing	Times	
CLR-HEAD L EXC.	Cumulative count of printhead L replacement count clearing	Times	
CLR-HEAD R EXC.	Cumulative count of printhead R replacement count clearing	Times	
CLR Wia-1 EXC.	Cumulative count of unit Wia-1 (waste ink box unit) replacement count clearing	Times	
CLR Wia-3 EXC.	Cumulative count of unit Wia-3 (platen ink box unit) replacement count clearing	Times	
CLR Wia-4 EXC.	Cumulative count of unit Wia-4 (platen ink box unit) replacement count clearing	Times	
CLR Wia-5 EXC.	Cumulative count of unit Wia-5 (platen ink box unit) replacement count clearing	Times	
CLR Wia-6 EXC.	Cumulative count of unit Wia-6 (suction fan unit) replacement count clearing	Times	
CLR CR-1 EXC.	Cumulative count of unit CR-1 (carriage unit bushing) replacement count clearing	Times	
CLR CR-2 EXC.	Cumulative count of unit CR-2 (linear encoder sensor/linear scale/shaft cleaner) replacement count clearing	Times	
CLR CR-3 EXC.	Cumulative count of unit CR-3 (carriage height changing cam) replacement count clearing	Times	
CLR CR-4 EXC.	Cumulative count of unit CR-4 (ink tube unit/flexible cable unit) replacement count clearing	Times	
CLR CR-5 EXC.	Cumulative count of unit CR-5 (multi sensor) replacement count clearing	Times	
CLR PG-1 EXC.	Cumulative count of unit PG-1 (purge unit) replacement count clearing	Times	
CLR HMa-1 EXC.	Cumulative count of unit HMa-1 (head management sensor) replacement count clearing	Times	
CLR PL-1 EXC.	Cumulative count of unit PL-1 (carriage motor) replacement count clearing	Times	
CLR PS-1 EXC.	Cumulative count of unit PS-1 (feed motor) replacement count clearing	Times	
CLR Mi-1 EXC.	Cumulative count of unit Mi-1 (mist fan) replacement count clearing	Times	
CLR MS-1 EXC.	Cumulative count of unit MS-1 (multi sensor) replacement count clearing	Times	Calibration error index, This counter synchronizes with CLR CR-5 EXC.
CLR-FACTORY CNT.	For factory	Times	

## 5) EXCHANGE: Counters related to parts replacement

T-7-133

Display	Description	Unit
MTC EXC.	Maintenance cartridge replacement count	Times
HEAD L EXC.	Printhead L replacement count	Times
HEAD R EXC.	Printhead R replacement count	Times
BOARD EXC.(M/B)	Main controller PCB replacement count	Times
Wia-1 EXC.	Wia-1 (waste ink box unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-1])	Times
Wia-3 EXC.	Wia-3 (platen ink box unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-3])	Times
Wia-4 EXC.	Wia-4 (platen ink box unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-4])	Times
Wia-5 EXC.	Wia-5 (platen ink box unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-5])	Times
Wia-6 EXC.	Wia-6 (suction fan unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-6])	Times
CR-1 EXC.	CR-1 (carriage unit bushing) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-1])	Times
CR-2 EXC.	CR-2 (linear encoder sensor/linear scale/shaft cleaner) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-2])	Times
CR-3 EXC.	CR-3 (carriage height changing cam) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-3])	Times
CR-4 EXC.	CR-4 (ink tube unit/flexible cable unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-4])	Times
CR-5 EXC.	CR-5 (multi sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-5])	Times
PG-1 EXC.	PG-1 (purge unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS PG-1])	Times
HMa-1 EXC.	HMa-1 (head management sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS HMa-1])	Times
PL-1 EXC.	PL-1 (carriage motor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS PL-1])	Times
PS-1 EXC.	PS-1 (feed motor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS PS-1])	Times
Mi-1 EXC.	Mi-1 (mist fan) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Mi-1])	Times
MS-1 EXC.	MS-1 (multi sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS MS-1])	Times

## 6) DETAIL-CNT: Other counters

T-7-134

Display	Description	Unit
MOVE PRINTER	Number of times "Prep.MovePrinter" on Main menu is executed.	Times
N-INKCHK(XX)	XX: Ink color Count of turning off the ink remaining level detection for each color	Times
MEDIACONFIG-CNT	Count of media registered by media editor	Times

## 7) INK-USE1: Counters related to ink consumption

T-7-135

Display	Description	Unit
INK-USE1(XX)	XX: Ink color Cumulative consumption amount of generic ink	ml
INK-USE1(TTL)	Total amount of cumulative consumption of generic ink	ml
N-INK-USE1(XX)	XX: Ink color Cumulative consumption amount of refilled ink	ml
N-INK-USE1(TTL)	Total amount of cumulative consumption of refilled ink	ml

## 8) INK-USE2: Counters related to ink consumption

T-7-136

Display	Description	Unit
INK-USE2(XX)	XX: Ink color Consumption amount of generic ink of the currently installed ink tank.	ml
INK-USE2(TTL)	Total consumption amount of generic ink of the currently installed ink tanks	ml
N-INK-USE2(XX)	XX: Ink color Consumption amount of refilled ink of the currently installed ink tank	ml
N-INK-USE2(TTL)	Total consumption amount of refilled ink of the currently installed ink tanks	ml

## 9) INK-EXC: Counters related to ink tank replacement

T-7-137

Display	Description	Unit
INK-EXC(XX)	XX: Ink color Cumulative count of generic ink tank replacement	ml
INK-EXC(TTL)	Total amount of cumulative count of generic ink tank replacement	ml
N-INK-EXC(XX)	XX: Ink color Cumulative count of refilled ink tank replacement	ml
N-INK-EXC(TTL)	Total amount of cumulative count of refilled ink tank replacement	ml

## 10) MEDIA x (x: 1 to 7): Counters related to media

One to seven media types are displayed individually in order with large cumulative print area.

T-7-138

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	Sq.m
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	Sq.m
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	Sq.m
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 11) MEDIA OTHER: Counters related to media

Displays the total amount of cumulative print area of the other media type than the above-mentioned.

T-7-139

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	Sq.m
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	Sq.m
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	Sq.m
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 12) MEDIASIZE1 ROLL: Counters related to roll media printing

T-7-140

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 13) MEDIASIZE2 ROLL: Counters related to roll media printing

T-7-141

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 14) MEDIASIZE1 CUT: Counters related to cut sheet printing

T-7-142

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 15) MEDIASIZE2 CUT: Counters related to cut sheet printing

T-7-143

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 16) HEAD DOT CNT.1: Counter related to dot count

T-7-144

Display	Description	Unit
XX	XX: Ink color Dot counts of each colors of the currently installed printhead	(x 1,000,000) dots
TTL	Total dot counts of each colors of the currently installed printhead	(x 1,000,000) dots

17) HEAD DOT CNT.2: Counter related to dot count

T-7-145

Display	Description	Unit
XX	XX: Ink color Cumulative dot counts of each colors	(x 1,000,000) dots
TTL	Total cumulative dot counts of each colors	(x 1,000,000) dots

## 18) PARTS CNT. : Counter related to consumable parts

C	O	U	N	T	E	R	C	R	-	1
a	a						b	b	b	b

F-7-17

The displays are selectable with the ◀ and ▶ keys.  
Counter of the consumable part (current)

C	O	U	N	T	E	R	C	R	-	1
1	:						x	x	x	x

F-7-18

Life of the consumable part

C	O	U	N	T	E	R	C	R	-	1
2	:						x	x	x	x

F-7-19

Use rate until part replacement

3	:						x	x	x	%

F-7-20

Counter of the consumable part (accumulate)

C	O	U	N	T	E	R	C	R	-	1
4	:						x	x	x	x

F-7-21

T-7-146

Display	Description	Unit
COUNTER xx-x	xx-x: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" > "Consumable Parts")  Display the status (aa) and the days passed since the counter (bbbb) resetting. - Status OK: Use rate (until part replacement) of all consumable parts included in each unit are below 90%. W1: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 90% or more. W2: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, but no need to stop the printer. E : Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, and the printer needs to be stopped.	Days
1:	Unit number of consumable parts Counter of the consumable part (current)	
2:	Life of the consumable part	
3:	Use rate until part replacement	%
4:	Counter of the consumable part (accumulate)	

**g) SETTING**

Make various settings.

## 1) Pth

Turn on or off the head pulse rank control function.

Default: OFF

## 2) RTC

Set RTC (real time clock) after replacing the lithium battery on the main controller PCB.

T-7-147

Display		Description
DATE	yyyy/mm/dd	Set date
TIME	hh:mm	Set time

## 3) PV AUTO JUDGE

Sets ink saver mode.

Default: OFF

## 4) NETWORK

See "e-maintenance/imageWARE Remote" for detail.

## 5) E-RDS

See "e-maintenance/imageWARE Remote" for detail.

## 6) HEAD DOT INF

Set whether to turn ON/OFF displaying of message as the result of non-discharging nozzle detection.

Default: OFF

T-7-148

Number of non-discharging nozzle (nozzle/2,560-nozzles)	ON	OFF
0-99	Displays a message to check the printing.	-
100-319	Displays a message to check the head.	-
320 or more	Displays a message to replace the head.	

**h) INITIALIZE**

Clear the [DISPLAY] histories, [ADJUST] settings, [COUNTER] values, and other parameters.

T-7-149

Display		Description
WARNING		Initialize the history of WARNING. (All displayed contents of [DISPLAY] > [WARNING] will be initialized.)
ERROR		Initialize the history of ERROR. (All displayed contents of [DISPLAY] > [ERROR] will be initialized.)
JAM		Initialize the history of JAM. (All displayed contents of [DISPLAY] > [JAM] will be initialized.)
ADJUST		Initialize the value of band adjustment (by user) and head adjustment. The automatically adjusted value will not be initialized.
W-INK		Initialize the remaining capacity (%) of the maintenance cartridge. (Clear [COUNTER] > [PRINTER] > [W-INK])
CARRIAGE		Initialize the counter related to carriage unit. (Clear [COUNTER] > [CARRIAGE])
PURGE		Initialize the counter related to purge unit. (Clear [COUNTER] > [PURGE])
INK-USE CNT		Initialize the consumption amount of ink. (Clear [COUNTER] > [INK-USE2], and count up [COUNTER] > [CLEAR] > [CLR-INK CONSUME])
W-INK-CHG CNT		Initialize the maintenance cartridge replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [MTC EXC.], and count up [COUNTER] > [CLEAR] > [CLR-MTC EXC.])
HEAD-CHG L CNT		Initialize the printhead L replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD L EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD L EXC.])
HEAD-CHG R CNT		Initialize the printhead R replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD R EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD R EXC.])
HDD BOX PASS.	ALL FOLDERS	Initialize the BOX password of all folders of the hard disk drive to factory default.
	FOLDER xx	Initialize the BOX password of FOLDER xx of the hard disk drive to factory default.
PARTS-CHG CNT	PARTS xx-x	xx-x: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the consumable part replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [xx-x EXC], and count up [COUNTER] > [CLEAR] > [CLR-xx-x EXC.])

Display		Description
PARTS COUNTER	PARTS xx-x	xx-x: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the counter amount of the consumable parts. (Clear [COUNTER] > [PARTS CNT.] > [COUNTER xx-x]) * After replacing the consumable part, be sure to execute this menu.
USER SETTING		Initializes the user menu. Same as executing the following mode in the user menu. -[Set./Adj. Menu]-[System Setup]-[Reset PaprSetngs] -[Set./Adj. Menu]-[Interface Setup]-[Return Defaults]
CA-KEY		See "e-maintenance/imageWARE Remote" for detail.
ERDS-DAT		See "e-maintenance/imageWARE Remote" for detail.

### 7.1.12 Details of Service Mode

iPF8300S

This section provides details of the Service mode menu.

#### a) DISPLAY

Displays and prints the printer information.

##### 1) PRIN F INF

Prints adjustment values in the User menu, [DISPLAY] and [COUNTER] parameters on A4-size or larger paper. When roll media is used, the layout is optimized according to the media width.

##### 2) SYSTEM

Displays the printer information shown below.

T-7-150

Display	Description	Unit
S/N	Serial number of printer	-
TYPE	Type setting on main controller PCB * iPF8300S are represented by 44".	-
LF TYPE	Feed roller type: 0 or 1	-
TMP	Ambient temperature	centigrade degrees
RH	Ambient humidity	%
SIZE LF	Detected size of loaded media (feed direction) 0 is always detected for the roll media.	mm/inch
SIZE CR	Detected size of loaded media (carriage scan direction)	mm/inch
AFTER INST.	Number of days since initial installation	Days

##### 3) HEAD

Displays the following EEPROM information of the printhead.

T-7-151

Display	Description
S/N R	Serial number of printhead R
S/N L	Serial number of printhead L
LOT R	Lot number of printhead R
LOT L	Lot number of printhead L

##### 4) INK

Displays the numbers of days passed since installation of the following ink tanks.

T-7-152

Display	Description	Unit
BK	Number of days passed since the BK ink tank was installed	Day(s)
MBK	Number of days passed since the MBK ink tank was installed	Day(s)
C	Number of days passed since the C ink tank was installed	Day(s)
M	Number of days passed since the M ink tank was installed	Day(s)
Y	Number of days passed since the Y ink tank was installed	Day(s)
PC	Number of days passed since the PC ink tank was installed	Day(s)
PM	Number of days passed since the PM ink tank was installed	Day(s)
GY	Number of days passed since the GY ink tank was installed	Day(s)

##### 5) WARNING

Displays the warning history (up to 20 events). The newest event has the smallest history number.

##### 6) ERROR

Displays the error history (up to 20 events). The newest event has the smallest history number.

##### 7) JAM

Displays log of jams that have occurred (up to five events). The newest event has the smallest history number.

Indicates the date and time of jam and error code. "0000" is displayed if there is no log.

0	1					M	M	/	D	D		H	H	:	M	M

13	Media name	Display media name, *:Unknown

## 8) INK CHECK

Displays the number of times the remaining ink level detection function was turned off, to accommodate refilled ink cartridges in the order of PC, C, BK, MBK, Y, M, PM and GY.

0: Never

1: Executed at least once

Screen 1, Screen 2 and Screen 3 are selectable with the ◀ and ▶ keys.  
These screens display the associated sensor status as listed in the table below.

T-7-154

Display position	Sensor name	LCD display contents
1	Pump Cam Sensor	0: Sensor ON , 1: Sensor OFF
2	Valve open/closed detection sensor (R)	0: Sensor ON , 1: Sensor OFF

48	(Not Used)	-

**c) ADJUST**

Performs adjustments and prints the adjustment and check patterns necessary for adjusting the printer parts.

**1) PRINT PATTERN**

T-7-155

Display	Description
NOZZLE 1	Prints the nozzle check pattern by single direction/ single pass without using the non-discharging back up. It is used to check for the non-discharging nozzles. - Media size: A4 - Media type: any
OPTICAL AXIS	Prints the pattern and adjusts the optical axis of the multi sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the carriage unit or multi sensor". - Media type: photo glossy paper
LF TUNING	Carry out automatic correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".
LF TUNING 2	Carry out manual correction of eccentricity of the feed roller. For more details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the feed roller and reed roller encoder". - The media type is "gloss photo paper".

**2) HEAD ADJ.**

Set or initialize the registration adjustment values of each printheads.

T-7-156

Display		Description
MANUAL HEAD ADJ	EXTENSION	Prints the detail patterns for the manual head adjustment at CR SCAN SPEED 2 (25inch/sec [high printing mode]). After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values. Try adjustment in this mode if vertical lines are warped or colors are out of alignment when the printer driver option "High-Precision Printing" or "Priority on dot placement accuracy" is selected.
	DETAIL	Prints the detail patterns for the manual head adjustment at CR SCAN SPEED 3 and 4 (33.3, 40inch/sec). After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values. Try adjustment in this mode if "BASIC" does not improve printing.
	BASIC	Prints the basic patterns for the manual head adjustment at CR SCAN SPEED 1 to 4 (12.5 to 40inch/sec). After printing, the mode will change to [ADJ. SETTING]. Check the printed patterns and input the set values.
ADJ. SETTING	A to F	This mode is to input the registration adjustment values. It is possible to return the values to the former one by printing the status print before changing the value.
	A-1 to F-2	
	SAVE SETTINGS	Save the registration adjustment values that has been input.
RESET SETTINGS		Initialize the registration adjustment values (to 0).

**3) NOZZLE CHECK POS.**

This mode is for adjusting the optical axis of the head management sensor. For details, refer to "Disassembly/Reassembly" > "Adjustment and Setup Items" > "Procedure after replacing the head management sensor".

**4) GAP CLIB.**

This mode measures the gap between the printhead and media by using the multi sensor and corrects the calibration value.

**5) CHANGE LF TYPE**

Change the type of the feed roller.

0: Old feed roller

1: New feed roller

6) CR MOTOR COG

Adjust the carriage motor rotation.

Perform in the following cases:

- When removing/attaching or replacing the carriage or carriage belt.
- When replacing the carriage motor or linear encoder sensor.
- When there is excessive load on the carriage (such as when jamming)

If the following error message appears when performing CR MOTOR COG, check that carriage and carriage belt are installed properly and clean the rail shaft. If the error still occurs, replace the carriage motor.

C	R		V	I	B	R	A	T	I	O	N
E	R	R	O	R							

F-7-30

**d) FUNCTION**

**1) CR UNLOCK**

Unlocks the carriage.

When CR UNLOCK is performed, the carriage lock pin is lowered and the carriage can be moved.

**2) CR LOCK**

Locks the carriage.

When CR LOCK is performed, the carriage lock pin is raised and the carriage is locked.

**3) PG CHECK**

Initializes the purge unit.

**4) CR AUTO SCAN**

The carriage scans.

When CR AUTO SCAN is performed, the carriage scans with the count, width, and speed set with CR SCAN COUNT/CR SCAN SIZE/CR SCAN SPEED.

**5) CR SCAN COUNT**

Sets the number of scans (1 to 30) to be performed with CR AUTO SCAN.

Default:1

**6) CR SCAN SIZE**

Sets the scan width to be performed with CR AUTO SCAN.

1:A4, 2:17inch, 3:24inch, 4:36inch, 5:44inch

Default:5

**7) CR SCAN SPEED**

Sets the speed of the scan to be performed with CR AUTO SCAN.

1:12.5, 2:25.0, 3:33.3, 4:40.0 (Unit: inch/sec)

Default:1

**MEMO:**

The settings made with CR SCAN COUNT, CR SCAN SIZE, CR SCAN SPEED are reset to default when the power is reset.

**8) OPT SENS OUTPUT**

Displays the values (analog value) multi sensor detected from the media.

You can confirm the amount of margin the media has with the values read with the multi sensor and the status of the multi sensor by comparing the values with the threshold.

Press the ◀ key or ▶ key to navigate among OUTPUT 0 to 5 windows.

29	Media edge (regular reflection) gain
30	-

**MEMO:**

- Displays all "?" if "GAP CALIB" is not performed.
- If the value exceeds 1000, 999 is displayed.

1. Checking "OUTPUT 0" and "OUTPUT 1" when media (excluding clear film) is fed

[Check 1]

Check whether the multi sensor performance has degraded or whether the media is compatible with the multi sensor.

When "Media edge (diffuse reflection) gain" is maximum values and "Media edge (diffuse reflection) media output" is 186 or less, an error occurs.  
Maximum value of "Media edge (diffuse reflection)" gain: 255

When the multi sensor and media are normal, the following values are displayed:

T-7-158

	Media edge (diffuse reflection) gain	Media edge (diffuse reflection) media output
Plain paper	About 10-35	About 500-600
Glossy paper	About 8-25	
Tracing paper	About 30-100	

[Check 2]

Check whether the multi sensor performance has degraded or whether the media is compatible with the multi sensor.

When the difference between "Media edge (diffuse reflection) gain" and "Media edge (diffuse reflection) platen output" is 100 or less, an error occurs.  
When the multi sensor and media are normal, the difference is about 300-600.

[Check 3]

Check the effect of external diffuse light.

When the difference between "Media edge (diffuse reflection) external light output" and "Media edge (diffuse reflection) platen output" is 500 or more, the effect of diffuse light is judged as being great.

When the effect is normal, the difference is about 50-300.

[Check 4]

Check whether the media is compatible.

When the result of "Media edge (regular reflection) gain" is five times as large as the result of "Media edge (diffuse reflection) gain", the media is judged as being incompatible with the multi sensor.

If the media is compatible, the result is about 0.5 to 1.5 times for plain/glossy paper; about 1-3 times for tracing paper.

[Check 5]

Check whether the media is compatible.

When the result of "Media edge (diffuse reflection) gain" is in one of the following, the media may be incompatible with the multi sensor.

- Nine or more times as large as that of plain paper
- Ten or more times as large as that of glossy paper
- Three or more times as large as that of tracing paper

## 2. Checking "OUTPUT 0" when clear film is fed

[Check 1]

Check whether the multi sensor performance has degraded or whether the media is compatible.

When the "Media edge (regular reflection) gain" is maximum values and "Media edge (regular reflection) media output" is 186 or less, an error occurs.

Maximum value of "media edge (regular reflection)" gain: 255

When the multi sensor and media are normal, the following values are displayed:

T-7-159

	Media edge (regular reflection) gain	Media edge (regular reflection) media output
Clear film	About 10-60	About 500-600

[Check 2]

Check whether the multi sensor performance has degraded or whether the media is compatible.

When the difference between "Media edge (regular reflection) gain" and "Media edge (regular reflection) platen output" is 100 or less, an error occurs.

When the multi sensor and media are normal, the difference is about 250-500.

[Check 3]

Check the effect of external diffuse light.

When the difference between "Media edge (regular reflection) external light output" and "Media edge (regular reflection) platen output" is 500 or more, the effect of diffuse light is judged as being great.

When the effect is normal, the difference is about 50-300.

## 3. Checking "OUTPUT 2/OUTPUT 3" and "OUTPUT 4/OUTPUT 5"

[Check 1]

Check whether the multi sensor performance has degraded or whether the media is compatible.

When "GAP gain" is maximum values and "GAP media output" is 93 or less, an error occurs.

Maximum value of "GAP gain": 255

When the multi sensor and media are normal, "GAP gain" is about 30-250.

[Check 2]

Check whether the multi sensor performance has degraded or whether the media is compatible.

When "LED gain" is maximum values and "LED media output" is 168 or less, an error occurs.

Maximum value of "LED gain": 255

When the multi sensor performance and media are normal, "LED gain" is about 5-100.

## 9) NOZZLE CHK

Checks for non-discharging nozzle with head management sensor.

## 10) NOZZLE INF

Displays the result of non-discharging nozzle check performed with "NOZZLE CHECK" by nozzle row of each ink color.

- Press the ◀ key or ▶ key to switch the ink color.
- AE:A-EVEN row, AO:A-ODD row, BE:B-EVEN row, BO:B-ODD row

C	A	E	:	O	K	A	O	:	O	K
	B	E	:	O	K	B	O	:	O	K

F-7-37

## 11) MEMORY CHK

T-7-160

Display	Description
DDR	Checks the DDR-SDRAM mounted on the Main Controller PCB.
EEP	Checks the EEPROM.

## 12) HEAD CNT CHK

Confirms the contact status of the printhead.

## e) REPLACE

## 1) L&amp;R PRINTHEADS

Replaces printheads L and R.

## f) COUNTER

Displays the life (operation frequency and time) of each unit, print counts for each media type, and else.  
The count values can be printed from [PRINT INF].

## 1) PRINTER: Counters related to product life

T-7-161

Display	Description	Unit
LIFE TTL	Cumulative number of printed media (equivalent of A4)	sheets
LIFE ROLL	Cumulative number of printed roll media (equivalent of A4)	sheets
LIFE CUTSHEET	Cumulative number of printed cut sheets (equivalent to A4)	sheets
LIFE A-F	Cumulative number of printed media for environments A to F	sheets
POWER ON	Cumulative power-on time (excluding the sleep time)	Hours
W-INK	Remaining capacity of the maintenance cartridge	%
CUTTER	Number of cutting operations (count as 1 by moving back and forth)	Times
WIPE	Number of wiping operations	Times
SLEEP ON	Cumulative sleep-on time	Hours

## 2) CARRIAGE: Counters related to carriage unit

T-7-162

Display	Description	Unit
PRINT	Cumulative printing time	Hours
DRIVE	Cumulative carriage moving time	Hours
CR COUNT	Cumulative carriage scan count (count as 1 by moving back and forth)	Times
CR DIST.	Cumulative carriage scan distance (count as 1 by moving 210mm)	Times
PRINT COUNT	Cumulative print end count (count as 1 by capping)	Times

## 3) PURGE: Counters related to purge unit

T-7-163

Display	Description	Unit
CLN-A-1	Cumulative number of automatic cleaning 1 (normal suction) operations	Times
CLN-A-2	Cumulative number of automatic cleaning 2 (ink level adjusting) operations	Times
CLN-A-3	Cumulative number of automatic cleaning 3 (initial filling) operations	Times
CLN-A-6	Cumulative number of automatic cleaning 6 (strong normal suction) operations	Times
CLN-A-7	Cumulative number of automatic cleaning 7 (aging) operations	
CLN-A-10	Cumulative number of automatic cleaning 10 (ink filling after secondary transportation) operations	Times
CLN-A-11	Cumulative number of automatic cleaning 11 (ink filling after head replacement) operations	Times
CLN-A-15	Cumulative number of automatic cleaning 15 (dot count small suction) operations	Times
CLN-A-16	Cumulative number of automatic cleaning 16 (sedimented ink agitation) operations	Times
CLN-A-17	Cumulative number of automatic cleaning 17 (small suction) operations	Times
CLN-A-TTL	Total number of automatic cleaning operations	Times
CLN-M-1	Cumulative number of manual cleaning 1 (normal suction) operations	Times
CLN-M-4	Cumulative number of manual cleaning 4 (ink draining from head after head replacement) operations	Times
CLN-M-5	Cumulative number of manual cleaning 5 (ink draining from head and tube before transportation ) operations	Times
CLN-M-6	Cumulative number of manual cleaning 6 (normal strong suction) operations	Times
CLN-M-TTL	Total number of manual cleaning operations	Times

## 4) CLEAR: Counters related to counter initialization

T-7-164

Display	Description	Unit	Remarks
CLR-INK CONSUME	Cumulative count of ink section consumption amount clearing	Times	
CLR-MTC EXC.	Cumulative count of maintenance cartridge replacement count clearing	Times	
CLR-HEAD L EXC.	Cumulative count of printhead L replacement count clearing	Times	
CLR-HEAD R EXC.	Cumulative count of printhead R replacement count clearing	Times	
CLR Wia-1 EXC.	Cumulative count of unit Wia-1 (waste ink box unit) replacement count clearing	Times	
CLR Wia-3 EXC.	Cumulative count of unit Wia-3 (platen ink box unit) replacement count clearing	Times	
CLR Wia-4 EXC.	Cumulative count of unit Wia-4 (platen ink box unit) replacement count clearing	Times	
CLR Wia-5 EXC.	Cumulative count of unit Wia-5 (platen ink box unit) replacement count clearing	Times	
CLR Wia-6 EXC.	Cumulative count of unit Wia-6 (suction fan unit) replacement count clearing	Times	
CLR CR-1 EXC.	Cumulative count of unit CR-1 (carriage unit bushing) replacement count clearing	Times	
CLR CR-2 EXC.	Cumulative count of unit CR-2 (linear encoder sensor/linear scale/shaft cleaner) replacement count clearing	Times	
CLR CR-3 EXC.	Cumulative count of unit CR-3 (carriage height changing cam) replacement count clearing	Times	
CLR CR-4 EXC.	Cumulative count of unit CR-4 (ink tube unit/flexible cable unit) replacement count clearing	Times	
CLR CR-5 EXC.	Cumulative count of unit CR-5 (multi sensor) replacement count clearing	Times	
CLR PG-1 EXC.	Cumulative count of unit PG-1 (purge unit) replacement count clearing	Times	
CLR HMa-1 EXC.	Cumulative count of unit HMa-1 (head management sensor) replacement count clearing	Times	
CLR PL-1 EXC.	Cumulative count of unit PL-1 (carriage motor) replacement count clearing	Times	
CLR PS-1 EXC.	Cumulative count of unit PS-1 (feed motor) replacement count clearing	Times	
CLR Mi-1 EXC.	Cumulative count of unit Mi-1 (mist fan) replacement count clearing	Times	
CLR MS-1 EXC.	Cumulative count of unit MS-1 (multi sensor) replacement count clearing	Times	Calibration error index, This counter synchronizes with CLR CR-5 EXC.
CLR-FACTORY CNT.	For factory	Times	

## 5) EXCHANGE: Counters related to parts replacement

T-7-165

Display	Description	Unit
MTC EXC.	Maintenance cartridge replacement count	Times
HEAD L EXC.	Printhead L replacement count	Times
HEAD R EXC.	Printhead R replacement count	Times
BOARD EXC.(M/B)	Main controller PCB replacement count	Times
Wia-1 EXC.	Wia-1 (waste ink box unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-1])	Times
Wia-3 EXC.	Wia-3 (platen ink box unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-3])	Times
Wia-4 EXC.	Wia-4 (platen ink box unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-4])	Times
Wia-5 EXC.	Wia-5 (platen ink box unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-5])	Times
Wia-6 EXC.	Wia-6 (suction fan unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Wia-6])	Times
CR-1 EXC.	CR-1 (carriage unit bushing) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-1])	Times
CR-2 EXC.	CR-2 (linear encoder sensor/linear scale/shaft cleaner) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-2])	Times
CR-3 EXC.	CR-3 (carriage height changing cam) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-3])	Times
CR-4 EXC.	CR-4 (ink tube unit/flexible cable unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-4])	Times
CR-5 EXC.	CR-5 (multi sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS CR-5])	Times
PG-1 EXC.	PG-1 (purge unit) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS PG-1])	Times
HMa-1 EXC.	HMa-1 (head management sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS HMa-1])	Times
PL-1 EXC.	PL-1 (carriage motor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS PL-1])	Times
PS-1 EXC.	PS-1 (feed motor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS PS-1])	Times
Mi-1 EXC.	Mi-1 (mist fan) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS Mi-1])	Times
MS-1 EXC.	MS-1 (multi sensor) replacement count (Count of executing [INITIALIZE] > [PARTS COUNTER] > [PARTS MS-1])	Times

## 6) DETAIL-CNT: Other counters

T-7-166

Display	Description	Unit
MOVE PRINTER	Number of times "Prep.MovePrinter" on Main menu is executed.	Times
N-INKCHK(XX)	XX: Ink color Count of turning off the ink remaining level detection for each color	Times
MEDIACONFIG-CNT	Count of media registered by media editor	Times

## 7) INK-USE1: Counters related to ink consumption

T-7-167

Display	Description	Unit
INK-USE1(XX)	XX: Ink color Cumulative consumption amount of generic ink	ml
INK-USE1(TTL)	Total amount of cumulative consumption of generic ink	ml
LINK-USE1(XX)	XX: Ink color Cumulative consumption amount of generic large ink	ml
LINK-USE1(TTL)	Total amount of cumulative consumption of generic large ink	ml
SINK-USE1(XX)	XX: Ink color Cumulative consumption amount of generic small ink	ml
SINK-USE1(TTL)	Total amount of cumulative consumption of generic small ink	ml
N-INK-USE1(XX)	XX: Ink color Cumulative consumption amount of refilled ink	ml
N-INK-USE1(TTL)	Total amount of cumulative consumption of refilled ink	ml

## 8) INK-USE2: Counters related to ink consumption

T-7-168

Display	Description	Unit
INK-USE2(XX)	XX: Ink color Consumption amount of generic ink of the currently installed ink tank.	ml
INK-USE2(TTL)	Total consumption amount of generic ink of the currently installed ink tanks	ml
N-INK-USE2(XX)	XX: Ink color Consumption amount of refilled ink of the currently installed ink tank	ml
N-INK-USE2(TTL)	Total consumption amount of refilled ink of the currently installed ink tanks	ml

## 9) INK-EXC: Counters related to ink tank replacement

T-7-169

Display	Description	Unit
INK-EXC(XX)	XX: Ink color Cumulative count of generic ink tank replacement	ml
INK-EXC(TTL)	Total amount of cumulative count of generic ink tank replacement	ml
N-INK-EXC(XX)	XX: Ink color Cumulative count of refilled ink tank replacement	ml
N-INK-EXC(TTL)	Total amount of cumulative count of refilled ink tank replacement	ml

## 10) MEDIA x (x: 1 to 7): Counters related to media

One to seven media types are displayed individually in order with large cumulative print area.

T-7-170

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	Sq.m
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	Sq.m
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	Sq.m
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 11) MEDIA OTHER: Counters related to media

Displays the total amount of cumulative print area of the other media type than the above-mentioned.

T-7-171

Display	Description	Unit
NAME	Media type	-
TTL	Total amount of cumulative print area of roll media and cut sheet (metric)	Sq.m
TTL	Total amount of cumulative print area of roll media and cut sheet (inch)	Sq.f
ROLL	Cumulative print area of roll media (metric)	Sq.m
ROLL	Cumulative print area of roll media (inch)	Sq.f
CUT SHEET	Cumulative print area of cut sheet (metric)	Sq.m
CUT SHEET	Cumulative print area of cut sheet (inch)	Sq.f

## 12) MEDIASIZE1 ROLL: Counters related to roll media printing

T-7-172

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 13) MEDIASIZE2 ROLL: Counters related to roll media printing

T-7-173

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 14) MEDIASIZE1 CUT: Counters related to cut sheet printing

T-7-174

Display	Description	Unit
P-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (physical size)	m2/Sq.f
P-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (physical size)	m2/Sq.f
P-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (physical size)	m2/Sq.f
P-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (physical size)	m2/Sq.f
P-SQ -17	Cumulative print area of paper less than 17 inches (physical size)	m2/Sq.f
P-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (physical size)	sheets
P-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (physical size)	sheets
P-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (physical size)	sheets
P-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (physical size)	sheets
P-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (physical size)	sheets

## 15) MEDIASIZE2 CUT: Counters related to cut sheet printing

T-7-175

Display	Description	Unit
D-SQ 44-60	Cumulative print area of paper equal to or larger than 44 inches but less than 60 inches (data size)	m2/Sq.f
D-SQ 36-44	Cumulative print area of paper equal to or larger than 36 inches but less than 44 inches (data size)	m2/Sq.f
D-SQ 24-36	Cumulative print area of paper equal to or larger than 24 inches but less than 36 inches (data size)	m2/Sq.f
D-SQ 17-24	Cumulative print area of paper equal to or larger than 17 inches but less than 24 inches (data size)	m2/Sq.f
D-SQ -17	Cumulative print area of paper less than 17 inches (data size)	m2/Sq.f
D-CNT 44-60	Cumulative number of sheets of A4-equivalent paper equal to or larger than 44 inches but less than 60 inches (data size)	sheets
D-CNT 36-44	Cumulative number of sheets of A4-equivalent paper equal to or larger than 36 inches but less than 44 inches (data size)	sheets
D-CNT 24-36	Cumulative number of sheets of A4-equivalent paper equal to or larger than 24 inches but less than 36 inches (data size)	sheets
D-CNT 17-24	Cumulative number of sheets of A4-equivalent paper equal to or larger than 17 inches but less than 24 inches (data size)	sheets
D-CNT -17	Cumulative number of sheets of A4-equivalent paper less than 17 inches (data size)	sheets

## 16) HEAD DOT CNT.1: Counter related to dot count

T-7-176

Display	Description	Unit
XX	XX: Ink color Dot counts of each colors of the currently installed printhead	(x 1,000,000) dots
TTL	Total dot counts of each colors of the currently installed printhead	(x 1,000,000) dots

---

17) HEAD DOT CNT.2: Counter related to dot count

T-7-177

Display	Description	Unit
XX	XX: Ink color Cumulative dot counts of each colors	(x 1,000,000) dots
TTL	Total cumulative dot counts of each colors	(x 1,000,000) dots

## 18) PARTS CNT. : Counter related to consumable parts

C	O	U	N	T	E	R	C	R	-	1
a	a						b	b	b	b

F-7-38

The displays are selectable with the ◀ and ▶ keys.  
Counter of the consumable part (current)

C	O	U	N	T	E	R	C	R	-	1
1	:						x	x	x	x

F-7-39

Life of the consumable part

C	O	U	N	T	E	R	C	R	-	1
2	:						x	x	x	x

F-7-40

Use rate until part replacement

C	O	U	N	T	E	R	C	R	-	1
3	:						x	x	x	%

F-7-41

Counter of the consumable part (accumulate)

C	O	U	N	T	E	R	C	R	-	1
4	:						x	x	x	x

F-7-42

T-7-178

Display	Description	Unit
COUNTER xx-x	xx-x: Unit number of consumable parts (For detail, refer to "Maintenance and Inspection" > "Consumable Parts")  Display the status (aa) and the days passed since the counter (bbbb) resetting. - Status OK: Use rate (until part replacement) of all consumable parts included in each unit are below 90%. W1: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 90% or more. W2: Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, but no need to stop the printer. E : Use rate (until part replacement) of either of the consumable parts included in each unit has reached 100%, and the printer needs to be stopped.	Days
1:	Unit number of consumable parts Counter of the consumable part (current)	
2:	Life of the consumable part	
3:	Use rate until part replacement	%
4:	Counter of the consumable part (accumulate)	

**g) SETTING**

Make various settings.

## 1) Pth

Turn on or off the head pulse rank control function.

Default: OFF

## 2) RTC

Set RTC (real time clock) after replacing the lithium battery on the main controller PCB.

T-7-179

Display		Description
DATE	yyyy/mm/dd	Set date
TIME	hh:mm	Set time

## 3) PV AUTO JUDGE

Sets ink saver mode.

Default: OFF

## 4) NETWORK

See "e-maintenance/imageWARE Remote" for detail.

## 5) E-RDS

See "e-maintenance/imageWARE Remote" for detail.

## 6) HEAD DOT INF

Set whether to turn ON/OFF displaying of message as the result of non-discharging nozzle detection.

Default: OFF

T-7-180

Number of non-discharging nozzle (nozzle/2,560-nozzles)	ON	OFF
0-99	Displays a message to check the printing.	-
100-319	Displays a message to check the head.	-
320 or more	Displays a message to replace the head.	

**h) INITIALIZE**

Clear the [DISPLAY] histories, [ADJUST] settings, [COUNTER] values, and other parameters.

T-7-181

Display		Description
WARNING		Initialize the history of WARNING. (All displayed contents of [DISPLAY] > [WARNING] will be initialized.)
ERROR		Initialize the history of ERROR. (All displayed contents of [DISPLAY] > [ERROR] will be initialized.)
JAM		Initialize the history of JAM. (All displayed contents of [DISPLAY] > [JAM] will be initialized.)
ADJUST		Initialize the value of band adjustment (by user) and head adjustment. The automatically adjusted value will not be initialized.
W-INK		Initialize the remaining capacity (%) of the maintenance cartridge. (Clear [COUNTER] > [PRINTER] > [W-INK])
CARRIAGE		Initialize the counter related to carriage unit. (Clear [COUNTER] > [CARRIAGE])
PURGE		Initialize the counter related to purge unit. (Clear [COUNTER] > [PURGE])
INK-USE CNT		Initialize the consumption amount of ink. (Clear [COUNTER] > [INK-USE2], and count up [COUNTER] > [CLEAR] > [CLR-INK CONSUME])
W-INK-CHG CNT		Initialize the maintenance cartridge replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [MTC EXC.], and count up [COUNTER] > [CLEAR] > [CLR-MTC EXC.])
HEAD-CHG L CNT		Initialize the printhead L replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD L EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD L EXC.])
HEAD-CHG R CNT		Initialize the printhead R replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [HEAD R EXC.], and count up [COUNTER] > [CLEAR] > [CLR-HEAD R EXC.])
HDD BOX PASS.	ALL FOLDERS	Initialize the BOX password of all folders of the hard disk drive to factory default.
	FOLDER xx	Initialize the BOX password of FOLDER xx of the hard disk drive to factory default.
PARTS-CHG CNT	PARTS xx-x	xx-x: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the consumable part replacement frequency. (Clear [COUNTER] > [EXCHANGE] > [xx-x EXC], and count up [COUNTER] > [CLEAR] > [CLR-xx-x EXC.])

Display		Description
PARTS COUNTER	PARTS xx-x	xx-x: Unit number of consumable parts (For details, refer to "Maintenance and Inspection" > "Consumable Parts") Initialize the counter amount of the consumable parts. (Clear [COUNTER] > [PARTS CNT.] > [COUNTER xx-x]) * After replacing the consumable part, be sure to execute this menu.
USER SETTING		Initializes the user menu. Same as executing the following mode in the user menu. -[Set./Adj. Menu]-[System Setup]-[Reset PaprSetngs] -[Set./Adj. Menu]-[Interface Setup]-[Return Defaults]
CA-KEY		See "e-maintenance/imageWARE Remote" for detail.
ERDS-DAT		See "e-maintenance/imageWARE Remote" for detail.
JOB LOG		Initialize the history of JOB LOG.

(4) PV AUTO JUDGE ON(NORMAL) 1  
 (a) (b)

F-7-43

(1) Version numbers of the firmware installed in the printer, boot ROM, and MIT DB format

(2) Printer information

For more item details, see "Detail of Service Mode" > "a) Display".

(3) Counter information

For more item details, see "Detail of Service Mode" > "e) Counter".

(a) Consumables status

(b) Number of days elapsed since the counter was last reset

(c) Counter value

(d) Value with which consumables reach their replacement timing

(e) Ratio of the current count to the replacement timing

(f) Cumulative counter value

(4) Ink saver mode setting

(a) Ink saver mode status

(b) Number of times ink save mode has been executed (unit: times).

**b) NOZZLE 1**

A sample printout that is produced by executing [SERVICE MODE]> [ADJUST]> [PRINT PATTERN]> [NOZZLE 1] is shown below.

**c) OPTICAL AXIS**

A sample printout that is produced by executing [SERVICE MODE]> [ADJUST]> [PRINT PATTERN]> [OPTICAL AXIS] is shown below.

**d) ROUGH**

A sample printout that is produced by executing [SERVICE MODE]> [ADJUST]> [HEAD ADJ.] > [AUTO HEAD ADJ]> [ROUGH] is shown below.

e) DETAIL

A sample printout that is produced by executing [SERVICE MODE]> [ADJUST]> [HEAD ADJ.] > [AUTO HEAD ADJ]> [DETAIL] is shown below.

F-7-47

f) BASIC

A sample printout that is produced by executing [SERVICE MODE]> [ADJUST]> [HEAD ADJ.] > [AUTO HEAD ADJ]> [BASIC] is shown below.

### 7.1.15 e-Maintenance/imageWARE Remote

iPF8300 / iPF8300S

#### 1. Overview

The e-Maintenance/imageWARE Remote system allows a customer's device information and status to be monitored via the Internet on a server called the UGW (Universal Gateway) Server.

The following device information/ statuses can be monitored.

- Service mode counters
- Parts counters
- Mode counters
- Firmware information
- Service call errors log
- Jam log
- Alarm log
- Alert change statuses (Toner/ ink low/ out, etc.)

Device monitor information above is sent by the e-RDS (embedded Remote Diagnostic System), which is embedded in the devices.

Further, as the above is all customer information, https SOAP protocol is used for communication between the UGW and the device, providing enhanced security (SSL client communication)

F-7-55

#### 2. Feature and benefits

Device (e-RDS) embedded with network module can realize a front-end processing of the e-Maintenance/imageWARE Remote system without attaching an extra hardware equipment.

The e-Maintenance/imageWARE Remote system can be implemented without imposing a burden on the users.

#### 3. Settings procedures

##### 3.1 Advance preparations

To monitor the device with e-Maintenance/imageWARE Remote, the following settings are required.

##### 1) Advance confirmation

Check with the UGW administrator whether the printer to be connected to the e-Maintenance/imageWARE remotely has been registered in the UGW.

##### 2) Advance preparations

Interview the user's system administrator in advance to find out the following information about the network.

Information item -1

IP address setting methods

Check whether automatic setting or manual setting is to be used, and confirm the information below.

- Automatic setting: (DHCP, RARP, BOOTP) (ON/OFF selection)

or

- Manual setting: IP address, subnet mask and gateway address to be set

Information item -2

Is there a DNS server in use?

If there is a DNS server in use, find out the following.

- Primary DNS server address
- Secondary DNS server address (optional)

Information item -3

Is there a proxy server?

If there is a proxy server in use, find out the following.

- Proxy server address
- Port number connected to proxy server

Information item -4

Is proxy server authentication required?

If proxy server authentication is required, find out the following.

- User name and password required for proxy authentication

##### 3) Network settings

Make the network settings based on the information obtained in "2) Advance preparations."

Network settings are made in user mode. Therefore, it is assumed that the user has already set it. However, there are a few cautions as described below, and if necessary, there may be cases in which the service technicians do it after obtaining an approval from user.

Caution point -1

DNS server settings

Under the present specs, DNS server settings cannot be entered from the operation panel menu. Use "Remote UI" to enter.

Caution point -2

Proxy server settings

Proxy server settings cannot be made in "Remote UI". Enter from the operation panel menu. In addition, the operation panel menu items for proxy server only appear when e-RDS functions are enabled. Therefore, when you make proxy server settings, turn the "E-RDS SWITCH" setting to "ON" as described in later sections beforehand.

Caution point -3  
Validate the settings (restart the printer)  
The server address settings are activated only after you restart the printer. Make sure you always restart the printer after changing server address settings.

(1) How to enter Proxy server address

- [1] Display to show enter mode  
a: Small alphabet letter  
A: Capital alphabet letter  
1: Numerical character
- [2] URL entry field (128 one-byte characters)

- Following symbols exist in each enter mode. (When you press the ▲ key, characters on the right hand side will appear.)  
[a] Small alphabet letter mode: [Symbol] abcdefghijklmnopqrstuvwxyz  
[A] Capital alphabet letter mode: [Symbol] ABCDEFGHIJKLMNOPQRSTUVWXYZ  
[1] Numerical character mode: [Symbol] 1234567890

- [Symbol] appears in the following order.

- Within the URL entry field, you can use the ▲ or ▼ key to select a character, and the ◀ or ▶ key to move the cursor.
- The Stop key has the Delete function when there is a character at the cursor position. (The character at the position of the cursor is deleted, moving all following characters one position toward freed place.)  
If there is no character at the cursor position, it has the Backspace function. (The character at the left of the cursor is deleted, moving the cursor.)
- When you move the cursor to a position of a character and press the ▲ or ▼ key, you can insert characters. (The character at the cursor position is moved to the right, and a new character is inserted.)
- You can select the enter mode with the Navi key. (The default setting is small alphabet letter.)

(2) How to enter port number

- Possible to set between 1 and 65535 (The default display is 1).
- The top digit can be selected between 0 and 6. Other digits can be selected between 0 and 9.
- When OK key is pressed, and the value is over 65535, it is fixed on 65535.
- When OK key is pressed, and the value is 0, it is fixed on 1.

## (3) How to enter user name

[1] Entry filed (24 one-byte characters)

- It is the same as the entering method of proxy server address.

## (4) How to enter password

[1] Entry filed (24 one-byte characters)

- If a password has already been set, when you press the ▲ or ▼ key at any cursor position, all the "\*" will disappear and the first letter will be entered as the first character.
- Entered characters are visible until you press OK key. Once entering into the menu again, they will be changed to "\*".
- Other information is the same as the entering method of proxy server address.

### 3.2 e-RDS settings

1) Enter the service mode.

- Turn off the printer power.
- Turn on the power while pressing the [Load] key and [Navigate] key.
  - \* Keep pressing the above keys until "Initializing" is displayed.
- "S" appears at the top right of the display.
- Press the ◀ or ▶ key to choose the [Set./Adj. Menu] and press the [OK] key.
  - \* "SERVICE MODE" appears in the menu list and the MESSAGE LED flashes.
- Press the ▲ key or ▼ key to choose "SERVICE MODE" and press the [OK] key.

2) Set the following e-RDS setting items No.1-4.

(If the result of the communication test (COM-TEST) is "NG", execute setting items No.5-6 to solve the problem.)

T-7-182

No.	Item	Type	Description
1	E-RDS SWITCH	2 bytes	OFF : Disable/ ON : Enable e-Maintenance/ imageWARE Remote system to send device information, meter data, and error statuses to the UGW. Default value is OFF (not in use)
2	UGW-ADDRESS	129 bytes (NULL included, SJIS not allowed)	The UGW address by default : https://a01---. The complete address is not provided in this document for security reason.
3	UGW-PORT	4 bytes	The UGW Port Number by default : 443 Validation : 1-65535
4	COM-TEST		To perform Communication test with UGW and set "OK!" / "NG!" as the result.
5	COM-LOG		Detailed communication data log Switches to display time when error occurred, error code, and error data up to now. Max 30 loggings retained. Max 128 characters (not containing NULL) for Error information.
6	ERDS-DAT		Initialize e-RDS setting data

### 3.3 Service Mode Menu Tree

T-7-183

First Level	Second Level	Third Level	Fourth Level	Fifth Level	Sixth Level

\* Press ► key to move to the next menu of the same layer, and press ▼ key to move to the menu of one layer deeper.

\* The menus shown in '\*1' are the e-RDS-related menus.

### 3.4 e-RDS Related Setting Details

#### 1) e-RDS's Operation Mode [E-RDS SWITCH]

In service mode, referring to the "Service Mode Menu Tree", go to [E-RDS SWITCH] menu using ► key and ▼ key.

(1) Choose between [ON] or [OFF] using the ◀ and ▶ keys.

E - R D S   S W I T C H
O F F

F-7-61

(2) Press [OK] key to determine the operation mode and go back to the previous screen.

E - R D S   S W I T C H
= O N

F-7-62

- When the operation mode is determined, "=" will be displayed.

- OFF: When it is set to [OFF], e-RDS is not used. Default value is OFF.

- ON: When it is set to [ON], e-RDS is used.

## 2) UGW Address [UGW-ADDRESS] and UGW port [UGW-PORT]

Usually, the default values set in advance are used for the setting value of [UGW-ADDRESS] and [UGW-PORT]. Unless there is a special instruction, the default value should not be changed. If it should be changed, the communication with UGW may have an error. If [UGW-ADDRESS] and [UGW-PORT] are changed, the new setting will be enabled after power OFF/ON.

Therefore, usually, the setup is not necessary.

\* If you change under a special instruction, perform the following procedure.

### (1) Setting address for UGW

- In service mode, referring to the "Service Mode Menu Tree", go to [UGW-ADDRESS] menu using ► key and ▼ key.

```

E - R D S
U G W   A D D R E S S
  
```

F-7-63

- Press ▼ key to enter the Setup Mode. (A character indicating the input mode (in the upper right corner of the screen) and the cursor are displayed.) Enter UGW address (URL).

```

U G W - A D D R E S S      : a
h t t p : / /
  
```

F-7-64

Display to indicate an input mode

A:Alphabet capital letter

a:Alphabet small letter

1:Numerical character

- The cursor is shown at the first letter.
- Use ▲ and ▼ keys to select characters to enter.
- Press [Back] key to cancel what you entered and go back to the previous screen.
- Press [OK] key to determine what you entered and go back to the previous screen.

### (2) Setting up the GW Port Number

- In service mode, referring to the "Service Mode Menu Tree", go to [UGW-PORT] menu using ► key and ▼ key.

```

E - R D S
U G W   P O R T
  
```

F-7-65

- Press ▼ key to enter the Setup Mode. (A cursor is displayed.) Enter a port number.

```

U G W - P O R T
                                0 0 0 0 0
  
```

F-7-66

- Use ▲ and ▼ keys to select characters to enter.
- Press [Back] key to cancel what you entered and go back to the previous screen.
- Press [OK] key to determine what you entered and go back to the previous screen.

\* The actual setting value of UGW address [UGW-ADDRESS] and UGW port [UGW-PORT] are categorized as confidential information, so they are not described in this manual.

## 3) Communication Test [COM-TEST]

### (1) In service mode, referring to the "Service Mode Menu Tree", go to [COM-TEST] menu using ► key and ▼ key.

```

C O M - T E S T
Y E S
  
```

F-7-67

### (2) Press [OK] key to start the test. ("=" is displayed at the start of the test.)

```

C O M - T E S T
= Y E S
  
```

F-7-68

### (3) During the communication test, "CHECK NOW" is displayed.

```

C O M - T E S T
C H E C K   N O W . .
  
```

F-7-69

- Once the communication test is started, it cannot be cancelled.(Other operation won't be accepted until the result is obtained.)

(4) If the communication test was successful, "CHECK RSLT:OK" is displayed.

```

C O M - T E S T
C H E C K   R S L T : O K

```

F-7-70

- Press ▲ key to exit this operation mode and go back to the top of [COM-TEST] menu.

(5) If the communication test was failed, "CHECK RSLT:NG" is displayed.

```

C O M - T E S T
C H E C K   R S L T : N G

```

F-7-71

- Press ▲ key to exit this operation mode and go back to the top of [COM-TEST] menu.

- If you cannot obtain the result after 30 seconds from the start of a communication test, the test is considered failed and the same screen will appear.

\* When the communication test was successful, it is necessary to take the interval of 5 minutes before performing the next communication test.

#### 4) Communication Log [COM-LOG]

Communication Error Information/Detailed Communication Error Information can be displayed on the screen at the time of a communication error with the Service Center (including proxy server error). When a communication error occurs, you can refer to this information to study how to deal with the problem.

\* For the countermeasure corresponding to each Communication Error Information or Detailed Communication Error Information, see the list of error message in "4. Troubleshoot".

(1) In service mode, referring to the "Service Mode Menu Tree", go to [COM-LOG] menu using ► key and ▼ key.

```

E - R D S
C O M - L O G

```

F-7-72

(2) Press ▼ key, and communication error information is displayed. On the upper line of the LCD, a log number (01-30) and an error code are shown; on the bottom line, an occurrence date and time of the error is shown.

```

N o : 0 1      X X X X X X X X H
Y Y Y Y / M M / D D   H H : M M

```

F-7-73

- COM-LOG information can be saved up to 30 cases.

- Use Right and Left keys to change logs to display.

- Logs are displayed in the sequence of the time of occurrence. (Log number 1 is the latest log.)

- Press ▲ key to exit this operation mode and go back to the top of [COM-LOG] menu.

\* If the Communication Error Information is not saved, the screen below will appear.

```

C O M - L O G
N O   L O G

```

F-7-74

- Press ▲ key to exit the communication error information screen and go back to the top of [COM-LOG] menu.

(3) Press ▼ key to display the Detailed Communication Error Information (maximum 128 characters).

1st-32nd characters of Detailed Communication Error Information are shown.

```

X X X X X X X X X X X X X X X X
X X X X X X X X X X X X X X X X

```

F-7-75

33rd-64th characters of Detailed Communication Error Information are shown.

```

X X X X X X X X X X X X X X X X
X X X X X X X X X X X X X X X X

```

F-7-76

65th-96th characters of Detailed Communication Error Information are shown.

```

X X X X X X X X X X X X X X X X
X X X X X X X X X X X X X X X X

```

F-7-77

97th-128th characters of Detailed Communication Error Information are shown.

```

X X X X X X X X X X X X X X X X
X X X X X X X X X X X X X X X X

```

F-7-78

- Use ◀ and ▶ keys to move among Screen and Screen. (Detailed Communication Error Information can be made with maximum 128 characters, however, even if the information is made up with 1 to 96 characters, all Screens are still displayed.)

- Press ▲ key to exit the Detailed Communication Error Information screen and go back to the Communication Error Information screen.

\* If Detailed Communication Error Information does not exist, the screen below will appear.

```

N O   E R R O R   D E T A I L

```

F-7-79

- Press ▲ key to exit the Detailed Communication Error Information screen and go back to the Communication Error Information screen.

### 5) Initializing the e-RDS setting [ERDS-DAT]

Usually, the setup is not necessary.

Use this procedure when you want to reset the e-RDS settings to the factory default.

(1) In service mode, referring to the "Service Mode Menu Tree", go to [ERDS-DAT] menu using ▶ key and ▼ key.

```

E - R D S   D A T
N O

```

F-7-80

(2) Choose between YES/NO using ◀ and ▶ keys, and press [OK] key to set.

```

E - R D S   D A T
= Y E S

```

F-7-81

- Press [OK] key, and "=" will appear and the initializing process will begin.

[NO]: Do not initialize the e-RDS setting. Default value is [NO].

[YES]: Initialize the e-RDS setting.

### 6) Displaying the CA Certificate Information [VALIDITY]

For the secure communication between the device (e-RDS) and the UGW, an authentication technology from a certification authority is used. A license has been issued from the certification authority. For this reason, the devices are shipped with the CA (Certificate Authority) certificate enabled in advance to prove the license obtained.

Therefore, usually, the setup is not necessary.

To confirm that this CA certificate is valid or how long it will be valid, you can display the expiration date of the CA certificate information.

(1) In service mode, referring to the "Service Mode Menu Tree", go to [VALIDITY] menu using ▶ key and ▼ key.

```

C A - C E R T I F I C A T E
V A L I D I T Y

```

F-7-82

(2) Press ▼ key, and the expiration date of the CA certificate will be displayed.

```

V A L I D I T Y
Y Y Y Y / M M / D D

```

F-7-83

- Press ▲ key to exit the CA certificate expiration date display screen and go back to the top of [VALIDITY] menu.

\* If the CA certificate is deleted, the screen below will appear.

```

V A L I D I T Y
N O T   I N S T A L L E D

```

F-7-84

- Press ▲ key to exit the CA certificate expiration date display screen and go back to the top of [VALIDITY] menu.

### 7) Deleting the CA Certificate [CA-KEY]

For the secure communication between the device (e-RDS) and the UGW, an authentication technology from a certification authority is used. A license has been issued from the certification authority. For this reason, the devices are shipped with the CA (Certificate Authority) certificate enabled in advance to prove the license obtained.

The device (e-RDS) uses this CA certificate to communicate with the UGW, thus CA must not be deleted.

Therefore, usually, the setup is not necessary.

\* If you delete the CA certificate under a special instruction, perform the following procedure.

(1) In service mode, referring to the "Service Mode Menu Tree", go to [CA-KEY] menu using ► key and ▼ key.

C A - K E Y
N O

F-7-85

(2) Choose between YES/NO using ◀ and ▶ keys, and press [OK] key to set.

C A - K E Y
= Y E S

F-7-86

- Press [OK] key, and "=" will appear and the initializing process will begin.

[NO]: Do not delete the CA certificate. Default value is [NO].

[YES]: Delete the CA certificate.

## 4. FAQ

T-7-184

No.	Question	Answer
Q1	Registration information of the device (E-RDS) is once deleted from the UGW server, and is re-registered after that. If a communication test is not carried out, then device information on UGW becomes invalid.	When registration of the device (e-RDS) is deleted from the UGW, the status will be changed to the communication test not completed because related information has lost from a database. Therefore, device information will also become invalid if that condition persists for seven days without carrying out the communication test. Hence, to avoid the invalid condition, carry out the communication test.
Q2	The communication test with the UGW server results NG!	The communication test might become NG in the following cases. - 1. Name resolution was failed due to an incorrect host name or DNS server has been halted. - 2. Network cable is blocked off. Network cable is broken. - 3. Proxy server settings are not correct.
Q3	Could you describe the timing of data transmitting from the device (e-RDS) to the UGW, and what data size is sent to the UGW?	The schedule of data transmitting, and the start time are determined by settings in the UGW side. The timing is once per 16 hours by default, and counter data size is maximum 1400 bytes.
Q4	Can I turn the device power off during the device (e-RDS) operation?	While operating the device (e-RDS), the power of the printer and network equipment such as HUB must be ON. If power OFF is needed, do not leave it OFF for a long time. An error such as "Device is busy, try later" could occur if the power supply of network equipment is made prolonged OFF.

## 5. Troubleshooting

T-7-185

No.	Condition detected	Action
1	The communication test has failed.	Check network conditions such as proxy server settings and so on. - Check the communication log from COM-LOG. -> Execute "Remedy" in the "Error message list". - Check whether RGW-ADDRESS or RGW-PORT settings have changed.

## 6. Error message list

Details of the errors and their remedies are as described below.  
(The meaning of server indicates the UGW in this section)

T-7-186

No.	Error Message	Cause	Remedy
1	SUSPEND: Communication test is not performed	E-RDS has been booted up (device reboot) with E-RDS SWITCH = ON but the communication test had not yet been performed.	Perform the communication test [COMTEST] in service mode.
2	Event Registration is Failed	Event Registration is Failed Processing (event processing) within the device has failed.	Turn the device OFF/ ON. If the error persists, replace the device system software (firmware). (Upgrade)
3	URL Scheme error (not https)	The header of the URL of the registered UGW is not in https format. A "https://" input error.	Check that the value of UGW-ADR has been entered correctly as https://a01---.
4	Server connection error	An UGW connection error. Displayed in the event of a TCP/IP communication fault.	Check the network-related settings according to "No.1: Communication test is not performed" in "Troubleshooting".
5	URL server specified is illegal	A URL different to that specified by the UGW has been set. An URL address setting error.	Check that the value of UGW-ADR has been entered correctly as https://a01---.
6	Proxy connection error	Cannot connect to proxy server. Displayed when unable to connect to proxy server.	Check proxy server address and re-enter if necessary.
7	Proxy authentication error	Displayed when the authentication to the proxy server has failed.	Check the user name and password required in order to login to the proxy, and re-enter if necessary.
8	Server certificate error	Device's route certificate is unavailable.	Reinstall the latest device system software (firmware). (Upgrade)
9	Server certificate expired	The route certificate registered with the device has expired.	Check that the device time and date are correctly set. If the device time and date are correct, upgrade to the latest system software (firmware).
10	Unknown error	Some other kind of communication error has occurred.	Try again after a period of time. If the same error occurs again, check the UGW status with the UGW administrator.
11	SOAP Fault	SOAP communication error has occurred.	Check that the value of UGW-PORT is 443.
12	Server response error (NULL)	A UGW response error (when UGW error code processing has failed). A HTTPS communication error.	Try again after a period of time. If the same error persists, check the UGW status with the UGW administrator.
13	Server response error (Hexadecimal) [Error detailed in the UGW]:*1	A UGW response error. Displayed when communication with UGW has been successful, but an error of some sort has prevented UGW from responding.	Check an error code (hexadecimal) returned from the UGW, then retry after a period of time.
14	Device internal error	An internal device error. An error due to the device side.	Switch the device OFF/ ON. Or, replace the device system software. (Upgrade)
15	Server schedule is invalid	During the communication test, there has been some kind of error in the schedule values passed from UGW.	When the error occurs, report the details to the support department. Then, after the UGW side has responded, retry the communication test.
16	Server response time out	UGW response time out. Due to network congestion, etc., the response from UGW does not come within the specified time.	If this error occurs when the communication test is being run, wait some time and rerun the test.
17	Server not found	There is a mistake in the UGW URL, and UGW cannot be accessed.	Check that the value of Service mode > E-RDS/RGW-ADR is https://a01---.
18	E-RDS switch is set OFF	E-RDS is disabled.	Set E-RDS SWITCH = ON, and run COM-TEST in service mode.
19	Server schedule is not exist	Server schedule does not exist. Blank schedule data has been received from UGW.	Check the device settings status with the UGW administrator.
20	Network is not ready, try later	Network-related settings have not been made for the device.	Make network-related settings properly for the device (printer).
21	URL error	A URL setting error. Non-URL text string entered in URL field.	Check that the value of UGW-ADR is https://a01---.
22	Proxy address resolution error	A proxy server address resolution error.	Check that the proxy server name is correct.
23	Server certificate verify error	The server certificate verification (URL check) error.	Check that the value of UGW-ADR is https://a01---.
24	Server address resolution error	UGW address resolution has failed.	Check that the value of UGW-ADR is https:// a01---.

\*1:[Hexadecimal] indicates an error code returned from the UGW in hexadecimal.

## 7. Service cautions

After performing the following service actions, it is necessary to perform the resetting of the e-RDS.  
Failure to do so will result that the counter transmitting value to the UGW may become unusual.

- System software (firmware) upgrade
- After replacing the main controller board, the following settings in service mode must not be changed unless there are specific instructions to do so. Changing these values will cause error in communication with the UGW.

(Initial values)

UGW-PORT: 443

UGW-ADDRESS: https://a01---.

### 7.1.16 Viewing PRINT INF

iPF8300

#### a) PRINT INF item detail

The details of each PRINT INF item displayed when performing [SERVICE MODE] > [DISPLAY] > [PRINTINF] are as follows:

T-7-187

Print item		Print content	Printed value
SYSTEM	S/N	Serial number of printer	characters/numerals of 8-byte
	TYPE	Type setting on main controller PCB	44
	LF TYPE	Feed roller type	0: old type roller 1: new type roller
	TMP	Ambient temperature	Unit: Centigrade degree
	RH	Ambient humidity	Unit: %
	SIZE LF	Detected size of loaded media (feed direction)	mm (0 is always detected for the roll media.)
	SIZE CR	Detected size of loaded media (carriage scan direction)	mm
	AFTER INST.	Number of days since initial installation	Unit: Day(s)
HEAD	S/N L	Serial number of printhead L	characters/numerals (8 digits)
	S/N R	Serial number of printhead R	characters/numerals (8 digits)
	LOT L	Lot number of printhead L	characters/numerals (8 digits)
	LOT R	Lot number of printhead R	characters/numerals (8 digits)
INK	Y, PC, C, PGY, GY, BK, PM, M, MBK, R, G, B	Number of days passed since the ink tank was installed	Unit: Days
WARNING	01 to 20	Warning history (up to 20 events)	Number: Lowest is the most recent Date: mm/dd Time: mm/ss Error code: Last 4 digits Cumulative number of printed media (equivalent of A4)
ERROR	01 to 20	Error history (up to 20 events)	Number: Lowest is the most recent Date: mm/dd Time: mm/ss Error code: Last 4 digits Cumulative number of printed media (equivalent of A4)

Print item		Print content	Printed value
JAM	01 to 05	JAM log (5 records)	Number: Lowest is the most recent Date: mm/dd Time: mm/ss Error code: Last 4 digits
	1	Jam type	1: CR error 2: Jam 3: Feed failure (delay) 4: Cut failure *: Unknown
	2	Media format	1: Roll media 2: Cut sheet (manual feed from top) 3: Cut sheet (manual feed from front) 4: Cassette *: Unknown
	3	Jam timing	1: Feed 2: Print 3: Eject *: Unknown
	4	Width detection OFF mode	1: ON 2: OFF *: Unknown
	5	Head height	0: SL (1.2mm) 1: L (1.4mm) 2: M1 (1.8mm) 3: M2 (2.0mm) 4: M3 (2.2mm) 5: H (2.6mm) *: Unknown
	6	(Not Used)	
	7	Cut mode	1: User cut 2: Eject cut 3: Auto cut *: Unknown
	8	Media passing environment	#####
	9	Borderless/Bordered	1: Bordered printing 2: Borderless printing *: Unknown
	10	(Not Used)	
	11	Print mode label No.	Display print mode *: Unknown
	12	Media width	Display media width (Unit: mm) *: Unknown
	13	Media type	Display media name *: Unknown
INK CHK	Y, PC, C, PGY, GY, BK, PM, M, MBK, R, G, B	Refill log Print whether disable remaining ink detection was previously set	0: Disable remaining ink detection was never set 1: Disable remaining ink detection was set at least once

#### a) PRINT INF item detail

The details of each PRINT INF item displayed when performing [SERVICE MODE] > [DISPLAY] > [PRINTINF] are as follows:

T-7-196

Print item		Print content	Printed value
SYSTEM	S/N	Serial number of printer	characters/numerals of 8-byte
	TYPE	Type setting on main controller PCB	44
	LF TYPE	Feed roller type	0: old type roller 1: new type roller
	TMP	Ambient temperature	Unit: Centigrade degree
	RH	Ambient humidity	Unit: %
	SIZE LF	Detected size of loaded media (feed direction)	mm (0 is always detected for the roll media.)
	SIZE CR	Detected size of loaded media (carriage scan direction)	mm
	AFTER INST.	Number of days since initial installation	Unit: Day(s)
HEAD	S/N L	Serial number of printhead L	characters/numerals (8 digits)
	S/N R	Serial number of printhead R	characters/numerals (8 digits)
	LOT L	Lot number of printhead L	characters/numerals (8 digits)
	LOT R	Lot number of printhead R	characters/numerals (8 digits)
INK	BK, MBK, C, M, Y, PC, PM, GY	Number of days passed since the ink tank was installed	Unit: Days
WARNING	01 to 20	Warning history (up to 20 events)	Number: Lowest is the most recent Date: mm/dd Time: mm/ss Error code: Last 4 digits Cumulative number of printed media (equivalent of A4)
ERROR	01 to 20	Error history (up to 20 events)	Number: Lowest is the most recent Date: mm/dd Time: mm/ss Error code: Last 4 digits Cumulative number of printed media (equivalent of A4)

Print item		Print content	Printed value
JAM	01 to 05	JAM log (5 records)	Number: Lowest is the most recent Date: mm/dd Time: mm/ss Error code: Last 4 digits
	1	Jam type	1: CR error 2: Jam 3: Feed failure (delay) 4: Cut failure *: Unknown
	2	Media format	1: Roll media 2: Cut sheet (manual feed from top) 3: Cut sheet (manual feed from front) 4: Cassette *: Unknown
	3	Jam timing	1: Feed 2: Print 3: Eject *: Unknown
	4	Width detection OFF mode	1: ON 2: OFF *: Unknown
	5	Head height	0: SL (1.2mm) 1: L (1.4mm) 2: M1 (1.8mm) 3: M2 (2.0mm) 4: M3 (2.2mm) 5: H (2.6mm) *: Unknown
	6	(Not Used)	
	7	Cut mode	1: User cut 2: Eject cut 3: Auto cut *: Unknown
	8	Media passing environment	#####
	9	Borderless/Bordered	1: Bordered printing 2: Borderless printing *: Unknown
	10	(Not Used)	
	11	Print mode label No.	Display print mode *: Unknown
	12	Media width	Display media width (Unit: mm) *: Unknown
	13	Media type	Display media name *: Unknown
INK CHK	BK, MBK, C, M, Y, PC, PM, GY	Refill log Print whether disable remaining ink detection was previously set	0: Disable remaining ink detection was never set 1: Disable remaining ink detection was set at least once

T-7-198

Print item		Print content	Printed value
COUNTER	PRINTER	POWER ON	Cumulative power-on time
		SLEEP ON	Cumulative sleep-on time
		CUTTER	Number of cutting operations
		WIPE	Number of wiping operations
		W-INK	Remaining capacity of the maintenance cartridge
		PDL	Cumulative number of printed media according to PDL
	CARRIAGE	PRINT	Cumulative printing time
		DRIVE	Cumulative carriage moving time
		CR-COUNT	Cumulative carriage scan count (count as 1 by moving back and forth)
		CR-DIST.	Cumulative carriage scan distance (count as 1 by moving 210mm)
		PRINT-COUNT	Cumulative print end count (count as 1 by capping)
	PURGE	CLN-A	Cumulative number of automatic cleaning operations
		1	Cumulative number of automatic cleaning 1 (normal suction) operations
		2	Cumulative number of automatic cleaning 2 (ink level adjusting) operations
		3	Cumulative number of automatic cleaning 3 (initial filling) operations
		6	Cumulative number of automatic cleaning 6 (strong normal suction) operations
		7	Cumulative number of automatic cleaning 7 (aging) operations
		8	Cumulative number of automatic cleaning 8 (flashing) operations
		10	Cumulative number of automatic cleaning 10 (ink filling after secondary transportation) operations
		11	Cumulative number of automatic cleaning 11 (ink filling after head replacement) operations
		15	Cumulative number of automatic cleaning 15 (dot count small suction) operations
		16	Cumulative number of automatic cleaning 16 (sedimented ink agitation) operations
		17	Cumulative number of automatic cleaning 17 (small suction) operations
		TTL	Total number of automatic cleaning operations
		CLN-M	Cumulative number of manual cleaning 1 operations
		1	Cumulative number of manual cleaning 1 (normal suction) operations
		4	Cumulative number of manual cleaning 4 (ink draining from head after head replacement) operations
		5	Cumulative number of manual cleaning 5 (ink draining from head and tube before transportation ) operations
		6	Cumulative number of manual cleaning 6 (normal strong suction) operations
		TTL	Total number of manual cleaning operations

Print item		Print content	Printed value

## 7.2 Special Mode

---

### 7.2.1 Special Modes for Servicing

iPF8000 / iPF8000S / iPF8100

This printer supports the following special modes in addition to the service mode:

- **PCB replacement mode**
- **Download mode**
- **Counter display mode**

#### 1. PCB replacement mode

This mode is used when replacing the main PCB or MC relay PCB.

By executing this mode,

- Backup data of the settings and counter values stored in the MC relay PCB are moved to the new main PCB.
- The data such as the settings and counter values are copied to the MC relay PCB.

##### a) Entering the PCB replacement mode

Follow the same procedure as that for entering the service mode.

(With the "Paper Source" button and "Information" button pressed down, turn on the "Power" button.)

When the printer starts up, compare the serial number memorized in the main PCB's EEPROM with that memorized in the MC relay PCB's EEPROM. If they do not match, or no serial number is memorized in either EEPROM, enter the PCB replacement mode.

While you are in the PCB replacement mode, the MESSAGE LED, roll media LED, and ONLINE LED are lit.

##### b) Procedure

Select "CPU BOARD" or "MC BOARD" using the [◀] and [▶] buttons, and then press the [OK] button to determine it.

###### - CPU BOARD

Select this after replacing the main PCB.

The data in the MC relay PCB is copied to the main PCB.

###### - MC BOARD

Select this before replacing the MC relay PCB.

The data in the main controller PCB is copied to the MC relay PCB.

##### c) Exiting the PCB replacement mode

Turning off the Power button of the printer allows you to exit the PCB replacement mode.

For details on how to replace the PCB, see Parts Replacement Procedure > Disassembly/Reassembly > Points to Note on Disassembly and Reassembly > Boards.

#### 2. Download mode

Use this mode only when updating the firmware without performing initialization.

##### a) Entering the download mode

1) Turning off the Power button of the printer.

2) With the "Stop" and "Information" buttons pressed down, turn on the Power button of the printer.

\* Keep pressing the above buttons until "Initializing" appears on the display.

##### b) Procedure

When "Download Mode/Send Firmware" is shown on the display, transfer the firmware.

When downloading of the firmware is completed, the printer is turned off automatically.

#### 3. Counter display mode

Use this mode to view only printer counter information.

##### a) Invoking counter display mode

1) Press the [MENU] button to keep [Information] > [System Info] selected.

2) Press the [▲] button while holding down the [MENU] button + [OK] button to invoke counter display mode.

##### b) How to view counter display mode

- S/N: Unit serial number

- CNT: Number of copies printed in A4 terms (unit: copies)

## 7.2.2 Special Modes for Servicing

iPF8300 / iPF8300S

This printer supports the following special modes in addition to the service mode:

- **PCB replacement mode**
- **Download mode**

### 1. PCB replacement mode

This mode is used when replacing the main PCB or MC relay PCB.

By executing this mode,

- Backup data of the settings and counter values stored in the MC relay PCB are moved to the new main PCB.
- The data such as the settings and counter values are copied to the MC relay PCB.

#### a) Entering the PCB replacement mode

Follow the same procedure as that for entering the service mode.

(With the [Load] key and [Navigate] key pressed down, turn on the [Power] key.)

When the printer starts up, compare the serial number memorized in the main PCB's EEPROM with that memorized in the MC relay PCB's EEPROM. If they do not match, or no serial number is memorized in either EEPROM, enter the PCB replacement mode.

#### b) Procedure

Select "CPU BOARD" or "MC BOARD" using the ◀ and ▶ keys, and then press the [OK] key to determine it.

- CPU BOARD

Select this after replacing the main PCB.

The data in the MC relay PCB is copied to the main PCB.

- MC BOARD

Select this before replacing the MC relay PCB.

The data in the main controller PCB is copied to the MC relay PCB.

#### c) Exiting the PCB replacement mode

Turning off the [Power] key of the printer allows you to exit the PCB replacement mode.

For details on how to replace the PCB, see "Disassembly/Reassembly > Points to Note on Disassembly and Reassembly > PCBs".

### 2. Download mode

Use this mode only when updating the firmware without performing initialization.

#### a) Entering the download mode

1) Turning off the [Power] key of the printer.

2) With the [Stop] and [Navigate] keys pressed down, turn on the [Power] key of the printer.

\* Keep pressing the above buttons until "Initializing" appears on the display.

#### b) Procedure

When "Download Mode/Send Firmware" is shown on the display, transfer the firmware.

When downloading of the firmware is completed, the printer is turned off automatically.

## 8.1 Outline

### 8.1.1 Outline

iPF8000 / iPF8000S / iPF8100

The printer indicates errors using the display and LEDs.

If an error occurs during printing, the printer status is also displayed on the status monitor of the printer driver.

The following three types of errors are displayed on the display:

- Warning

Status where the print operation can be continued without remedying the cause of the problem. This can, however, adversely affect the printing results.

- Error

Status where the print operation is stopped, and the regular operation cannot be recovered until the cause of the problem is remedied.

- Service call error

When a service call error occurs, the error is not cleared and the error indication remains on the operation panel even if the printer is powered off and on again. (Occurrence of the service call error is indicated again at power-on.)

This measure is taken to prevent user's recovery of the service call error and damages to the printer.

Service call errors can be cleared, however, by starting up the printer in the service mode.

Note that some of the warnings, errors, and service call error described in the following tables may not appear in this printer.

In addition, the message that appears on the screen may not be the same as what is described in the table.

#### Overview of warnings and error codes

The codes of warnings and errors are shown below according to the system.

T-8-1

Code	Diagnosis
0181xxxx-xxxx	Ink warning
0180xxxx-xxxx	Printhead warning
0184xxxx-xxxx	Maintenance cartridge warning
0134xxxx-xxxx	GARO warning
0303xxxx-xxxx	Cover error
0301xxxx-xxxx 0306xxxx-xxxx 0386xxxx-xxxx	Media error
0313xxxx-xxxx	Sensors, fans, motors error
0380xxxx-xxxx	Printhead error
0381xxxx-xxxx 0383xxxx-xxxx	Ink error
0384xxxx-xxxx	Maintenance cartridge error
0387xxxx-xxxx	Cutter unit error
0389xxxx-xxxx	Media take-up unit error
0390xxxx-xxxx	Firmware error
Exxx-xxxx	Service call error

\* "x" stands for a numeric or letter.

### 8.1.2 Outline

iPF8300 / iPF8300S

The printer indicates errors using the display and LEDs.

If an error occurs during printing, the printer status is also displayed on the status monitor of the printer driver.

The following three types of errors are displayed on the display:

- Warning

Status where the print operation can be continued without remedying the cause of the problem. This can, however, adversely affect the printing results.

- Error

Status where the print operation is stopped, and the regular operation cannot be recovered until the cause of the problem is remedied.

- Service call error

When a service call error occurs, the error is not cleared and the error indication remains on the operation panel even if the printer is powered off and on again. (Occurrence of the service call error is indicated again at power-on.)

This measure is taken to prevent user's recovery of the service call error and damages to the printer.

Service call errors can be cleared, however, by starting up the printer in the service mode.

Note that some of the warnings, errors, and service call error described in the following tables may not appear in this printer.

In addition, the message that appears on the screen may not be the same as what is described in the table.

## 8.2 Warning Table

### 8.2.1 Warnings

iPF8000 / iPF8000S / iPF8100

## 8.2.2 Warnings

iPF8300 / iPF8300S

\* Codes represent the numbers that are displayed in DISPLAY in service mode and that are recorded in PRINTINF. Messages that are not accompanied by a code indication are not logged.

T-8-3

Display message	Code*	Condition detected	Action
Ink Level: Check	0180104-1000	BK ink tank near-empty	Renew the ink tanks.
Ink Level: Check	0180101-1001	Y ink tank near-empty	Renew the ink tanks.
Ink Level: Check	0180102-1002	M ink tank near-empty	Renew the ink tanks.
Ink Level: Check	0180103-1003	C ink tank near-empty	Renew the ink tanks.
Ink Level: Check	0180106-1006	MBK ink tank near-empty	Renew the ink tanks.
Ink Level: Check	0180106-1007	MBK2 ink tank near-empty	Renew the ink tanks.
Problem with Printhead. Chk printing results	01800500-1010	Number of non-discharging nozzles in printhead: Warning level	Clean the printheads. Renew the printheads. Identify the head management sensor unit.
Prepare for maint cart replacement.	01841001-281A	Maintenance cartridge near-full	Replace the maintenance cartridge.
Prepare for parts replacement. Call for service.		Parts counter W1 level	Check the parts counter in service mode.
Parts replacement time has passed. Call for service.		Parts counter W2 level	After checking the parts counter in service mode, replace any part whose counter is nearing the error value.
GARO W1221	01341221-1030	GARO (image mode): Unknown command	Verify the transmitted data before reprinting.
GARO W1222	01341222-1031	GARO (image mode): Invalid parameter count (no parameters)	Verify the transmitted data before reprinting.
GARO W1223	01341223-1032	GARO (image mode): Required parameter missing	Verify the transmitted data before reprinting.
GARO W1225	01341225-1034	GARO (image mode): Other warning	Verify the transmitted data before reprinting.
GARO W1226	01341226-103A	GARO (image mode): Image processing table error	Verify the transmitted data before reprinting.
GARO W1231	01341231-1035	GARO (setup): Unknown command	Verify the transmitted data before reprinting.
GARO W1232	01341232-1036	GARO (setup): Invalid parameter count	Verify the transmitted data before reprinting.
GARO W1233	01341233-1037	GARO (setup): Required parameter missing	Verify the transmitted data before reprinting.
GARO W1234	01341234-1038	GARO (setup): Data out of bounds	Verify the transmitted data before reprinting.
GARO W1235	01341235-1039	GARO (setup): Other warning	Verify the transmitted data before reprinting.
End of paper feed. Cannot feed paper more.		Forced feed limit	Check the remaining quantity of roll media.
This type of paper is not compatible with HP-GL/2.	01860006-1015	Non-support paper of HP-GL/2	Exchange for the compatible paper to HP-GL/2.
GL2:W0501 The memory is full.	01340501-1040	Memory full (HP-GL/2)	Check if there is the non-image area of the print. Verify the transmitted data before reprinting.
GL2:W0904 The memory is full.	01340904-1048	Overflow of Polygon buffer (HP-GL/2)	Check if there is the non-image area of the print. Verify the transmitted data before reprinting.
GL2:W0903 The memory is full.	01340903-1047	Overflow of replot buffer (HP-GL/2)	Check if there is the non-image area of the print. Verify the transmitted data before reprinting.
GL2:W0502 The parameter is out of range.	01340502-1041	Invalid parameter (HP-GL/2)	Verify the transmitted data before reprinting.
GL2:W0504 This command is not supported.	01340504-1043	Invalid command (HP-GL/2)	Verify the transmitted data before reprinting.
Mail box nearly full. Delete unwanted data	011A1001-2901	The free hard disk space left for Personal Boxes in the printer's hard disk does not have more than 1 GB, combined.	Delete unneeded jobs stored in Personal Boxes.
Mail box full. Now printing without saving data.	01861003-2902	100 jobs are stored in the Personal Box.	Delete unneeded jobs stored in Personal Boxes.
Before borderless printing, move the blue platen switch.	01861004-1049	The platen shutter is closed at the borderless printing.	Open the corresponding platen shutter.
Blue platen switch is dirty. Please clean the switch.	01861004-1050	Platen shutter cleaning warning	Clean the platen shutter.
Not much ink is left. Prepare to replace the ink.	01810103-1003	C ink tank near-empty	Renew the C ink tank.
Not much ink is left. Prepare to replace the ink.	01810102-1002	M ink tank near-empty	Renew the M ink tank.
Not much ink is left. Prepare to replace the ink.	01810101-1001	Y ink tank near-empty	Renew the Y ink tank.
Not much ink is left. Prepare to replace the ink.	01810106-1006	MBK ink tank near-empty	Renew the MBK ink tank.
Not much ink is left. Prepare to replace the ink.	01810104-1000	BK ink tank near-empty	Renew the BK ink tank.
Not much ink is left. Prepare to replace the ink.	01810112-1004	PM ink tank near-empty	Renew the PM ink tank.

Display message	Code*	Condition detected	Action
Not much ink is left. Prepare to replace the ink.	01810113-1005	PC ink tank near-empty	Renew the PC ink tank.
Not much ink is left. Prepare to replace the ink.	01810105-1008	GY ink tank near-empty	Renew the GY ink tank.
Not much ink is left. Prepare to replace the ink.	01810115-1009	PGY ink tank near-empty	Renew the PGY ink tank.
Not much ink is left. Prepare to replace the ink.	01810107-100A	R ink tank near-empty	Renew the R ink tank.
Not much ink is left. Prepare to replace the ink.	01810109-100B	B ink tank near-empty	Renew the B ink tank.
Not much ink is left. Prepare to replace the ink.	01810108-100C	G ink tank near-empty	Renew the G ink tank.
Ink tank is empty. Replace the ink tank.	01810303-1403	C ink tank empty	Renew the C ink tank.
Ink tank is empty. Replace the ink tank.	01810302-1402	M ink tank empty	Renew the M ink tank.
Ink tank is empty. Replace the ink tank.	01810301-1401	Y ink tank empty	Renew the Y ink tank.
Ink tank is empty. Replace the ink tank.	01810306-1406	MBK ink tank empty	Renew the MBK ink tank.
Ink tank is empty. Replace the ink tank.	01810304-1400	BK ink tank empty	Renew the BK ink tank.
Ink tank is empty. Replace the ink tank.	01810312-1404	PM ink tank empty	Renew the PM ink tank.
Ink tank is empty. Replace the ink tank.	01810313-1405	PC ink tank empty	Renew the PC ink tank.
Ink tank is empty. Replace the ink tank.	01810305-1408	GY ink tank empty	Renew the GY ink tank.
Ink tank is empty. Replace the ink tank.	01810315-1409	PGY ink tank empty	Renew the PGY ink tank.
Ink tank is empty. Replace the ink tank.	01810307-140A	R ink tank empty	Renew the R ink tank.
Ink tank is empty. Replace the ink tank.	01810309-140B	B ink tank empty	Renew the B ink tank.
Ink tank is empty. Replace the ink tank.	01810308-140C	G ink tank empty	Renew the G ink tank.
No ink tank loaded. Check ink tank.	01810103-1413	C ink tank removal	Attach the C ink tank.
No ink tank loaded. Check ink tank.	01810102-1412	M ink tank removal	Attach the M ink tank.
No ink tank loaded. Check ink tank.	01810101-1411	Y ink tank removal	Attach the Y ink tank.
No ink tank loaded. Check ink tank.	01810106-1416	MBK ink tank removal	Attach the MBK ink tank.
No ink tank loaded. Check ink tank.	01810104-1410	BK ink tank removal	Attach the BK ink tank.
The paper is too small.	013200D2-1051	Size clip error	Check the media size check. Change the media size.
Maximum jobs stored. Delete unwanted data.	011A1006-2907	Saved jobs exceed the Personal Box capacity.	Press the stop button to cancel the print job. Delete print jobs from the queue. Delete unneeded jobs stored on the hard disk.
No ink tank loaded. Check ink tank.	01830103-1413	C ink tank removal (during printing)	Attach the C ink tank.
No ink tank loaded. Check ink tank.	01830102-1412	M ink tank removal (during printing)	Attach the M ink tank.
No ink tank loaded. Check ink tank.	01830101-1411	Y ink tank removal (during printing)	Attach the Y ink tank.
No ink tank loaded. Check ink tank.	01830106-1416	MBK ink tank removal (during printing)	Attach the MBK ink tank.
No ink tank loaded. Check ink tank.	01830106-1417	MBK ink tank removal (during printing)	Attach the MBK ink tank.
No ink tank loaded. Check ink tank.	01830104-1410	BK ink tank removal (during printing)	Attach the BK ink tank.
No ink tank loaded. Check ink tank.	01830112-1414	PM ink tank removal (during printing)	Attach the BK ink tank.
No ink tank loaded. Check ink tank.	01830113-1415	PC ink tank removal (during printing)	Attach the BK ink tank.
No ink tank loaded. Check ink tank.	01830105-1418	GY ink tank removal (during printing)	Attach the BK ink tank.
No ink tank loaded. Check ink tank.	01830115-1419	PGY ink tank removal (during printing)	Attach the BK ink tank.
No ink tank loaded. Check ink tank.	01830107-141A	R ink tank removal (during printing)	Attach the BK ink tank.
No ink tank loaded. Check ink tank.	01830109-141B	B ink tank removal (during printing)	Attach the BK ink tank.
No ink tank loaded. Check ink tank.	01830108-141C	G ink tank removal (during printing)	Attach the BK ink tank.

Display message	Code*	Condition detected	Action
Unable to detect ink level correctly.	03031101-25B7	Invalidate the ink remaining detection function, when opening the ink tank cover. (during printing)	Renew the ink tank after closing the ink tank cover.
Paper Mismatch.	01061000-1021	Paper type mismatch	Check the type of paper that can be fed and reload the paper.
Borderless printing not possible. Check supported paper.	01861001-1052	Borderless printing disabled	Check the data, and then print again.
Paper position not suitable for borderless printing.	01861001-1053	Borderless printing disabled (engine detection)	Reload the paper.
Paper Width Mismatch.	01063000-1054	Roll media width mismatch	Change the roll media.
Blue platen switch is dirty. Please clean the switch.	01861005-1050	Platen shutter cleaning warning	Clean the platen shutter.

## 8.3 Error Table

### 8.3.1 Errors

iPF8000 / iPF8000S / iPF8100

The codes correspond to the numbers shown on the DISPLAY in the service mode.

T-8-4

Code	Status
03010000-200A	Media width detection error
03010000-200B	Media set position error
03010000-200C	Media leading edge not detected
03010000-200D	Cut sheet end cannot be detected
03010000-200E	Media too small
03010000-200F	Media too large
03010000-2016	Media became misaligned during feeding
03010000-2017	Media right edge not detected
03010000-2018	Media left edge not detected
03010000-2820	Head resistration improper adjustment
03010000-2821	LF improper adjustment
03010000-2822	Eccentricity improper adjustment
03010000-2823	Printhead check error
03010000-2824	Optical axis error
03010000-2E18	Media feeding failure
03010000-2E19 03010000-2E1A 03010000-2E1D	Feed error
03010000-2E1C	Ejection error
03010000-2E1F	Media is too small to print adjustment pattern
03010000-2E27	Media became misaligned during printing
03010000-2F33	Transparent media was loaded and cannot adjust
03016000-2010	Media skewed
03130000-2E21	IEEE error
03030000-2F29	Feed motor time out
03031000-2E0F	Upper cover open error
03031000-2E11	Carriage cover open error
03031000-2E12	Release lever error
03031000-2F38	Upper cover abnormaly open
03031000-2F39	Carriage cover abnormaly open
03031101-2E10	Ink tank cover error
03060000-2E14	Media size mismatch
03060000-2E16	Media type mismatch
03060000-2E20	Media type mismatch when printing adjusting patternes
03060100-2E02	No cut sheet loaded when cut sheet is required
03060A00-2E08	Media width mismatch
03060A00-2E00	Roll media was not loaded even though the received data indicated roll media.
03060A00-2E1B	End of roll media
03061000-2E15	Media type mismatch
03130031-260E	Gap detection error
03130031-260F	Gap reference surface error (not generated in the user mode.)
03130031-2618	VH voltage error
03130031-2F11	Carriage unit error
03130031-2F12	Feed unit error
03130031-2F13	A/D converter outside trigger output stop
03130031-2F14	ASIC register writing error

Code	Status
03130031-2F16	Mist fan error
03130031-2F17	Platen fan error
03130031-2F1F	Purge motor HP error
03130031-2F20	Purge motor error
03130031-2F22	Pump movement timeout
03130031-2F23	Pump cannot operate
03130031-2F25	Unable to detect CR motor HP
03130031-2F26	Carriage motor driving error
03130031-2F27	Carriage motor timeout
03130031-2F2A	Feed roller HP sensor error
03130031-2F2B	Feed motor driving error
03130031-2F2E	Roll media drive time out
03130031-2F32	Multi sensor faulty
03130031-2F3A	Valve motor error
03130031-2F28	Lift motor time out
03130031-2F36	EEPROM error
03130031-2F37	linear scale error
03800101-2800	Printhead R not installed
03800102-2808	Printhead L not installed
03800201-2802	Improper printhead R installed
03800201-2804	Printhead R installed to left side
03800201-2812	Printhead R version mismatch
03800202-2807	Printhead L installed to right side
03800202-280A	Improper printhead L installed
03800202-2813	Printhead L version mismatch
03800301-2801	Printhead R DI correction failure
03800302-2809	Printhead L DI correction failure
03800401-2803	Printhead R EEPROM error
03800402-280B	Printhead L EEPROM error
03800500-2F2F	Head management sensor error
03800500-2F30	Head management sensor position adjustment error
03800500-2F31	Head management sensor light-emission level error
03800501-280D	Many non-discharging nozzles on printhead R
03800502-280E	Many non-discharging nozzles on printhead L
03810104-2500	No ink (BK)
03810101-2501	No ink (Y)
03810102-2502	No ink (M)
03810103-2503	No ink (C)
03810112-2504	No ink (PM)
03810113-2505	No ink (PC)
03810106-2506	No ink (MBK)
03810105-2508	No ink (GY)
03810115-2509	No ink (PGY)
03810107-250A	No ink (R)
03810109-250B	No ink (B)
03810108-250C	No ink (G)
03810204-2580	Remaining ink low (BK)
03810201-2581	Remaining ink low (Y)
03810202-2582	Remaining ink low (M)
03810203-2583	Remaining ink low (C)
03810212-2584	Remaining ink low (PM)

Code	Status
03810213-2585	Remaining ink low (PC)
03810206-2586	Remaining ink low (MBK)
03810205-2588	Remaining ink low (GY)
03810215-2589	Remaining ink low (PGY)

03841001-2819	Maintenance cartridge tank full
03841101-2818	Maintenance cartridge not installed
03841201-2816	Maintenance cartridge EEPROM error
03841201-2817	Maintenance cartridge ID error
03841001-281B	Empty capacity of the maintenance cartridge when cleaning it various is insufficient.
03860002-2E0A	Manually fed cut sheet was already loaded even though received data indicated roll media
03860002-2E0C	When the roll paper was loaded, the data of the cut sheet specification was received.
03861001-2405	Media set position unsuitable for borderless printing
03861001-2406	Received data unsuitable for borderless printing
03862000-2E09	Roll paper running out
03870001-2015	Cutting failure
03890000-2920	Cannot take up media
03890000-2921	Taking up media not stopping
03900001-4042	MIT data transfer failure
03900001-4049	Forwarding ROM data machine kind difference
E194-4034	Sensor calibration error

## 8.3.2 Errors

iPF8300 / iPF8300S

\* Codes represent the numbers that are displayed in DISPLAY in service mode.

If the same message is displayed when the printer is turned off, then back on, take action as recommended in the Action column.

T-8-5

Display message	Code*	Condition detected	Action
Problem with Printhead Chk printing results	01800500-1010	The number of the printhead's non-discharge nozzle was over fixed level during the non-discharge detection operation.	Clean the printhead. Replace the printhead.
Problem with Printhead R Chk printing results	01800500-1012	The number of the right printhead's non-discharge nozzle was over fixed level during the non-discharge detection operation.	Clean the printhead. Replace the right printhead.
Problem with Printhead L Chk printing results	01800500-1013	The number of the left printhead's non-discharge nozzle was over fixed level during the non-discharge detection operation.	Clean the printhead. Replace the left printhead.
Move the blue platen switch No.02 to the right.	01861007-1056	The platen shutter switch No.2 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.03 to the right.	01861008-1057	The platen shutter switch No.3 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.04 to the right.	01861009-1058	The platen shutter switch No.4 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.05 to the right.	0186100A-1059	The platen shutter switch No.5 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.06 to the right.	0186100B-105A	The platen shutter switch No.6 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.07 to the right.	0186100C-105B	The platen shutter switch No.7 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.08 to the right.	0186100D-105C	The platen shutter switch No.8 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.09 to the right.	0186100E-105D	The platen shutter switch No.9 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.10 to the right.	0186100F-105E	The platen shutter switch No.10 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.11 to the right.	01861010-105F	The platen shutter switch No.11 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.12 to the right.	01861011-1060	The platen shutter switch No.12 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.13 to the right.	01861012-1061	The platen shutter switch No.13 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Move the blue platen switch No.14 to the right.	01861013-1062	The platen shutter switch No.14 has been closing when shutter is the mode of opening.	Check the opening or closing of the platen shutter switch. Check the platen and multi sensor and surrounding parts. Replace the multi sensor.
Paper size not detected. Reload paper.	03010000-200A	Unable to detect the paper width (Paper loaded at an improper position)	Reload the paper

Display message	Code*	Condition detected	Action
Paper size not detected. Lift the release lever and reload the paper.	03010000-200C	Unable to detect the leading end of paper	Check the leading end of paper. Reload the paper.
Leading edge detection error. Lift the release lever and align leading edge with orange line.	03010000-200D	Unable to detect the trailing end of cut sheet	Check the sheet length. Check to see if paper has not jammed.
This paper cannot be used. Check supported paper sizes.	03010000-200E	Undersized paper (cut sheets/roll media)	Replace with larger-sized paper.
This paper cannot be used. Check supported paper sizes.	03010000-200F	Oversized paper (cut sheets/roll media)	Replace with smaller-sized paper.
Paper jam. Manually rewind roll all the way.	03010000-2016	Cut sheet feed failure	Check or replace a cut sheet.
Paper size not detected. Lift the release lever and reload the paper.	03010000-2017	Paper (right) edge detection error	Check the right edge of paper. Check the paper type.
Paper size not detected. Lift the release lever and reload the paper.	03010000-2018	Paper (left) edge detection error	Check the left edge of paper. Check the paper type.
	03010000-201A	Paper (right) edge detection error (cut sheet pick-up)	Set or replace the media.
	03010000-201B	Paper (right) edge detection error (roll media pick-up)	Set or replace the media.
	03010000-201C	Paper (left) edge detection error (cut sheet pick-up)	Set or replace the media.
	03010000-201D	Paper (left) edge detection error (roll media pick-up)	Set or replace the media.
Cannot print as specified. Lift the release lever and replace paper with A4/LTR (vertical) or larger.	03010000-2E1F	Undersized paper loaded for internal printing (A4 or larger)	Replace with A4/Letter or any larger-sized paper.
Cannot print as specified. Lift the release lever and replace paper with A3/Ledger (vertical) or larger.	03010000-2E1F	Undersized paper loaded for internal printing (A3 or larger)	Replace with A3/11"x17" or any larger-sized paper.
Cannot print as specified. Lift the release lever and replace roll with 10 in. wide or larger roll.	03010000-2E1F	Undersized paper loaded for internal printing (roll media)	Replace with roll media at least 10 inches in width.
Cannot feed paper. Remove paper and press Load/Eject.	03010000-2E25	Paper jam while feeding/ejecting/printing	Remove the paper jam and reload the paper.
Cannot feed paper. Lift the release lever and reload paper.	03010000-2E27	Paper jam during feeding/printing/ejection	Reload the paper.
Paper jam. Manually rewind roll all the way and press OK.	03010000-2E3A	Media load failure	Check the pick-up unit and roll media. Check to see if paper has not jammed.
Paper jam. Manually rewind roll all the way and press OK.	03010000-2E3B	Media load failure (lower roll)	Check the pick-up unit and roll media. Check to see if paper has not jammed.
Error in cutter position.	03010000-2E47	Cutter position error	Check the cutter unit and surrounding part.
Hardware error. 03130031-2E29 Turn off printer, wait, then turn on again.	03010000-2F29	Feed motor timeout (Roll media)	Check the roll feed unit. Check roll media. Check to see if paper has not jammed in the printer.
Use another paper. Press Online to clear the error.	03010000-2F33	Unadjustable because of transparent media	Replace with adjustable media.
Paper loaded askew. Lift the release lever.	03016000-2010	Skew	Correct the skew in the paper and reload it.
Ink tank cover is open. Turn off printer, wait a while, and turn it on again.	03031000-2E10	Ink tank cover abnormally open	Close the ink tank cover and turn on the printer again.
Rel lever is in wrong position. Turn off printer, wait, then turn on again.	03031000-2F21	Pinch roller open error	Check the pinch roller unit and surrounding part.
Top cover is open. Turn off printer, wait a while, and turn it on again.	03031000-2F38	Top cover abnormally open	Close the top cover and turn on the printer again.
Paper mismatch. Make sure media type and paper size match for the adjustment print.	03060000-2E20	Cut sheet type or size is not match when printing the printhead registration.	Change the cut sheet.
Sheet printing is selected.	03060100-2E02	Cut sheet is not loaded when printing.	Set the cut sheet.
	03060100-2E05	Cut sheet is not loaded when receiving the printing job.	Set the cut sheet.

Display message	Code*	Condition detected	Action
Roll printing is selected. Press Load/Eject and load a roll.	03060A00-2E00	Data with a roll media specification has been received but no roll media are loaded.	Load roll media.
No Roll Feed Unit. Turn printer off and install roll feed unit.	03060A00-2E0E	Roll media unit not installed	Install the roll media unit.
The roll is empty. Lift the release lever and replace the roll.	03060A00-2E1B	Roll media end	Renew the supply of roll media.
Roll feed unit error. Turn off the printer and check the roll feed unit.	03060A00-2E24	Roll cam sensor error	Check the roll unit.
	03060A00-2E33	Roll media is not loaded when receiving the printing job.	Set the roll media.
Roll printing is selected. Press Load/Eject and load a roll.	03060A00-2E35	Roll media is not loaded for internal printing.	Reload the roll media.
Roll printing is selected.	03060A00-2E37	Roll media is not loaded when printing.	Set the roll media.
Roll feed unit error. Turn off printer and check roll feed unit.	03060B00-2E24	Roll feed unit failure	Replace the roll feed unit.
Wrong paper type.	03061000-2E15	Paper type mismatch	Check the type of paper that can be fed and reload the paper.
This type of paper is not compatible with HP-GL/2. Online: Print Stop: Stop Printing Load/Eject: Change Paper	03061000-2E15	Non-support media of HP-GL/2	Exchange for the compatible paper to HP-GL/2 before reprinting.
PapRWidth Mismatch.	03063000-2E08	Roll media width mismatch	Change the roll media.
Hardware error. 03130000-2E21 Turn off printer, wait, then turn on again.	03130000-2E21	IEEE1394 port error	Check the IEEE1394 board is attached correctly. Replace the IEEE1394 board. Replace the main controller PCB.
Hardware error. 03130031-260E Turn off printer, wait, then turn on again.	03130031-260E	Gap detection error	Check the carriage unit and surrounding parts. Replace the main controller PCB.
Hardware error. 03130031-260F Turn off printer, wait, then turn on again.	03130031-260F	Gap reference surface error	Replace the multi sensor reference.
Hardware error. 03130031-2618 Turn off printer, wait, then turn on again.	03130031-2618	VH voltage error	Check the power supply unit.
Hardware error. 03130031-290A Turn off printer, wait, then turn on again.	03130031-290A	HDD unit detection error	Check the HDD unit is attached correctly. Check the HDD unit and surrounding parts. Replace the HDD unit.
Hardware error. 03130031-2E23 Turn off printer, wait, then turn on again.	03130031-2E23	Cutter unit failure	Check the cutter unit and sensor.
Hardware error. 03130031-2F13 Turn off printer, wait, then turn on again.	03130031-2F13	A/D converter external trigger output stop detection hardware error 1	Replace the new printhead.
Hardware error. 03130031-2E14 Turn off printer, wait, then turn on again.	03130031-2F14	Writing to the ASIC register disabled	Replace the main controller PCB
Hardware error. 03130031-2E16 Turn off printer, wait, then turn on again.	03130031-2F16	Mist fan rotation error	Check the mist fan.
Hardware error. 03130031-2E17 Turn off printer, wait, then turn on again.	03130031-2F17	Platen suction fan lock detection error	Check the platen suction fan.
Hardware error. 03130031-2E1F Turn off printer, wait, then turn on again.	03130031-2F1F	Pump cam sensor error	Check the purge unit.
Hardware error. 03130031-2E20 Turn off printer, wait, then turn on again.	03130031-2F20	Purge motor cam position error	Check the purge unit.
Hardware error. 03130031-2E22 Turn off printer, wait, then turn on again.	03130031-2F22	Pump move timeout	Check the purge unit.

Display message	Code*	Condition detected	Action
Hardware error. 03130031-2E23 Turn off printer, wait, then turn on again.	03130031-2F23	Purge motor error Pump inoperable	Check the purge unit.
Hardware error. 03130031-2E25 Turn off printer, wait, then turn on again.	03130031-2F25	Unable to detect the carriage motor home position	Check the carriage unit. Check the linear encoder for smears.
Hardware error. 03130031-2E26 Turn off printer, wait, then turn on again.	03130031-2F26	Carriage inoperable	Check the carriage unit and surrounding parts.
Hardware error. 03130031-2E27 Turn off printer, wait, then turn on again.	03130031-2F27	Carriage move timeout	Check the carriage unit and surrounding parts.
Hardware error. 03130031-2E2A Turn off printer, wait, then turn on again.	03130031-2F2A	Unable to detect the feed roller home position	Check the feed roller encoder and surrounding part. Check to see if paper has not jammed.
Hardware error. 03130031-2F2B Turn off printer, wait, then turn on again.	03130031-2F2B	LF operation failure	Check to see if paper has not jammed. Check the feed motor and feed roller.
Hardware error. 03130031-2E2E Turn off printer, wait, then turn on again.	03130031-2F2E	Roll travel timeout	Check the roll feed unit.
Hardware error. 03130031-2F32 Turn off printer, wait, then turn on again.	03130031-2F32	Multi sensor error	Check the environment for interferences from outside light. Replace the multi sensor unit.
Calibration There is a problem with the multi-sensor. Cancel calibration.	03130031-2F35	Color calibration disabled	Check the parts counter in service mode. Replace the multi sensor unit.
Calibration There is a problem with the multi-sensor. Cancel calibration.	03130031-2F35	The detection value of the temperature/humidity sensor was the ranges that were adjustment impossibility when performing color calibration.	Check the paper on which a pattern is printed for smears. Check the environment for interferences from outside light. Clean the printhead.
Hardware error. 03130031-2F3A Turn off printer, wait, then turn on again.	03130031-2F3A	Valve motor error	Check the ink supply unit.
Hardware error. 03130031-2F3B Turn off printer, wait, then turn on again.	03130031-2F3B	CS communication error	Remove the ink tanks and then reload them. Replace the ink tank. Check the main controller PCB.
Hardware error. 03130031-2F3C Turn off printer, wait, then turn on again.	03130031-2F3C	LF pressure error	Check the pinch roller and surrounding parts. Replace the pinch roller pressure drive unit.
Hardware error. 03130031-2F3D Turn off printer, wait, then turn on again.	03130031-2F3D	HP maintenance jet pump motor overload error	Check the purge unit.
Hardware error. 03130031-2F3E Turn off printer, wait, then turn on again.	03130031-2F3E	HP maintenance jet pump motor move timeout error	Check the purge unit.
Hardware error. 03130031-2F3F Turn off printer, wait, then turn on again.	03130031-2F3F	HP maintenance jet pump motor error	Check the purge unit.
Hardware error. 03130031-2F46 Turn off printer, wait, then turn on again.	03130031-2F46	Platen shutter failure	Check the platen shutter and shutter HP sensor.
Hardware error. 03130031-2F48 Turn off printer, wait, then turn on again.	03130031-2F48	VH voltage error	Check the power supply unit.
Hardware error. 03130031-2F49 Turn off printer, wait, then turn on again.	03130031-2F49	Left printhead short-circuit error detection (VH leakage)	Check that the left printhead is attached correctly. Check the contact of left printhead and surrounding parts. Replace the left printhead. Replace the carriage unit.
Hardware error. 03130031-2F4A Turn off printer, wait, then turn on again.	03130031-2F4A	Incorrect main controller PCB attachment error	Check the main controller PCB. Replace the correct main controller PCB.

Display message	Code*	Condition detected	Action
Hardware error. 03130031-2F50 Turn off printer, wait, then turn on again.	03130031-2F50	Right printhead short-circuit error detection (VH leakage)	Check that the right printhead is attached correctly. Check the contact of right printhead and surrounding parts. Replace the right printhead. Replace the carriage unit.
Hardware error. 03130031-2F51 Turn off printer, wait, then turn on again.	03130031-2F51	Printhead short-circuit error detection (VH leakage)	Check that the printhead is attached correctly. Check the contact of printhead and surrounding parts. Replace the printhead. Replace the carriage unit.
Hardware error. 03130031-2F52 Turn off printer, wait, then turn on again.	03130031-2F52	Incorrect carriage PCB attachment error	Check the carriage PCB. Replace the correct carriage PCB.
Hardware error. 03130031-4027 Turn off printer, wait, then turn on again.	03130031-4027	Lift travel timeout error	Check the carriage unit and surrounding parts.
Mail box full. Delete unwanted data on your computer to resume printing. Press Stop to cancel printing.	031A1001-2905	The job store executed when the free hard disk space left for Personal Boxes in the printer's hard disk is full.	Delete unneeded jobs stored in Personal Boxes.
Hard disk error. Press OK to reformat	031A1002-2908	Hard disk format error	Press the [OK] button to start reformatting the hard disk. When formatting is finished, the printer automatically restarts.
File read error. Turn off printer, wait a while, and turn it on again. Invalid files will be deleted.	031A1002-2909	Hard disk file error	Restart the printer. Only the corrupted files will be deleted, and the printer will restart.
Mail box full. Cannot save. Delete unwanted data on your computer to resume printing. Press Stop to cancel printing.	031A1006-2906	The store executed when 32 jobs are stored in the Personal Box.	Delete unneeded jobs stored in Personal Boxes.
The paper is too small.	033200D2-2E30	Size clip error	Confirm the print data.
No printhead. Install printhead.	03800100-2800	Printhead not installed	Install the printhead.
No right printhead Install right printhead.	03800101-2800	Right printhead not installed	Install the right printhead.
No left printhead Install left printhead.	03800102-2808	Left printhead not installed	Install the left printhead.
Printhead error. Open top cover and replace the printhead.	03800200-2802	Invalid printhead installed	Replace printhead.
Wrong printhead. Open top cover and replace the printhead.	03800200-2811	Printhead version error	Replace the printhead.
Right printhead error. Open top cover and replace the right printhead.	03800201-2802	Right printhead ID error	Replace the right printhead.
PHeads: wrong pos. Open top cover and check the printhead positions.	03800201-2804	The left printhead was installed to the installation position of right printhead.	Check the installation position of printhead.
Right printhead error. Open top cover and replace the right printhead.	03800201-2812	Right printhead version error	Replace the right printhead.
PHeads: wrong pos. Open top cover and check the printhead positions.	03800202-2807	The right printhead was installed to the installation position of left printhead.	Check the installation position of printhead.
Left printhead error. Open top cover and replace the left printhead.	03800202-280A	Left printhead ID error	Replace the left printhead.
Left printhead error. Open top cover and replace the left printhead.	03800202-2813	Left printhead version error	Replace the left printhead.
Left printhead error.	03800202-282D	Left printhead abnormal temperature detection error (during maintenance jet)	Replace the left printhead.
Left printhead error.	03800202-2830	Left printhead abnormal temperature detection error during maintenance jet (when restarting printer)	Replace the left printhead.
Printhead error. Open top cover and replace the right printhead.	03800300-2801	Printhead DI compensation failure	Replace printhead.
Right printhead error. Open top cover and replace the right printhead.	03800301-2801	Right printhead DI compensation failure	Replace the right printhead.
Left printhead error. Open top cover and replace the left printhead.	03800302-2809	Left printhead DI compensation failure	Replace the left printhead.

Display message	Code*	Condition detected	Action
Printhead error. Open top cover and replace the right printhead.	03800400-2803	Printhead EEPROM error	Replace printhead.
Right printhead error. Open top cover and replace the right printhead.	03800401-2803	Right printhead EEPROM error	Replace the right printhead.
Left printhead error. Open top cover and replace the left printhead.	03800402-280B	Left printhead EEPROM error	Replace the left printhead.
PHead needs cleaning. Press Online to clear error.	03800500-280C	Printhead found to have many non-discharging nozzles during a non-discharging inspection (printing paused)	Clean the printhead. Identify the nozzles in a nozzle check pattern. Replace the printhead.
Execute printhead cleaning. If this message is still displayed, replace the printhead.	03800500-280C	Printhead found to have many non-discharging nozzles during a non-discharging inspection (printing paused)	Clean the printhead. Identify the nozzles in a nozzle check pattern. Replace the printhead.
Execute printhead cleaning. If this message is still displayed, replace the printhead. Printing stopped.	03800500-2827	Printhead found to have many non-discharging nozzles during a non-discharging inspection (printing stopped)	Clean the printhead. Identify the nozzles in a nozzle check pattern. Replace the printhead.
Hardware error. 03800500-2F2F Turn off printer, wait, then turn on again.	03800500-2F2F	The non-discharge of the EVEN or ODD line (640-nozzles) is detected the 320-nozzles or more.	Check the head management sensor and surrounding parts. Check that the printhead is attached correctly. Replace the head management sensor. Replace the printhead.
Hardware error. 03800500-2F30 Turn off printer, wait, then turn on again.	03800500-2F30	Detectable area failure (when adjusting the position of non-discharging nozzle) The gap of detection position of nozzle both ends is big.	Check the ink tube unit and surrounding parts. Check the purge unit and surrounding parts. Check the head management sensor and surrounding parts. Check the flexible cable unit and surrounding parts. Check that the printhead is attached correctly. Replace the main controller PCB. Replace the printhead. Replace the carriage unit.
Hardware error. 03800500-2F31 Turn off printer, wait, then turn on again.	03800500-2F31	Non-discharge detection optical axis error	Check the head management sensor. Replace the head management sensor. Replace the printhead.
Hardware error. 03800500-2F40 Turn off printer, wait, then turn on again.	03800500-2F40	The non-discharge of all colors and chips (A/B, EVEN/ODD) and nozzles is detected.	Check the ink tube unit and surrounding parts. Check the purge unit and surrounding parts. Check the head management sensor and surrounding parts. Check the flexible cable unit and surrounding parts. Check that the printhead is attached correctly. Replace the head management sensor. Replace the main controller PCB. Replace the printhead. Replace the carriage unit.
Hardware error. 03800500-2F41 Turn off printer, wait, then turn on again.	03800500-2F41	About all chips and nozzles of one color, the non-discharge is detected.	Check the ink tube unit and surrounding parts. Check the purge unit and surrounding parts. Check the head management sensor and surrounding parts. Check the flexible cable unit and surrounding parts. Check that the printhead is attached correctly. Replace the main controller PCB. Replace the printhead. Replace the carriage unit.
Hardware error. 03800500-2F42 Turn off printer, wait, then turn on again.	03800500-2F42	About single line (A or B) and all nozzles (1280-nozzles) of one color, the non-discharge is detected.	Check the head management sensor and surrounding parts. Check the flexible cable unit and surrounding parts. Check that the printhead is attached correctly. Replace the main controller PCB. Replace the printhead. Replace the carriage unit.
Hardware error. 03800500-2F43 Turn off printer, wait, then turn on again.	03800500-2F43	About single chip (A or B, EVEN or ODD) and all nozzles (640-nozzles) of one color, the non-discharge is detected.	Check the head management sensor and surrounding parts. Check the flexible cable unit and surrounding parts. Check that the printhead is attached correctly. Replace the main controller PCB. Replace the printhead. Replace the carriage unit.
Hardware error. 03800500-2F44 Turn off printer, wait, then turn on again.	03800500-2F44	The non-discharge of the EVEN or ODD line (640-nozzles) is detected.	Check the head management sensor and surrounding parts. Check that the printhead is attached correctly. Replace the main controller PCB. Replace the printhead. Replace the carriage unit.
Hardware error. 03800500-2F47 Turn off printer, wait, then turn on again.	03800500-2F47	Head management sensor failure The APCCHK signal of head management sensor is out of range.	Check the head management sensor and surrounding parts. Replace the head management sensor. Replace the main controller PCB.
Clean right P Head	03800501-280D	The number of right printhead nozzle was over level that can back up non-discharging nozzle. (printing paused)	Clean the printhead. Change the setting of nozzle check warning. Replace the right printhead.

Display message	Code*	Condition detected	Action
Clean right P Head	03800501-2828	The number of right printhead nozzle was over level that can back up non-discharging nozzle. (printing stopped)	Clean the printhead. Change the setting of nozzle check warning. Replace the right printhead.
Clean left P Head	03800502-280E	The number of left printhead nozzle was over level that can back up non-discharging nozzle. (printing paused)	Clean the printhead. Change the setting of nozzle check warning. Replace the left printhead.
Clean left P Head	03800502-2829	The number of left printhead nozzle was over level that can back up non-discharging nozzle. (printing stopped)	Clean the printhead. Change the setting of nozzle check warning. Replace the left printhead.
Ink tank is empty. Press OK and replace ink tank.	03810101-2501	Y ink tank empty	Renew the Y ink tank.
	03810101-2511	Unidentified status of Y ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Cannot detect ink level correctly. Close tank cover.	03810101-259F	Subtank empty of Y ink tank (ink tank cover opening and refill ink tank usage)	After the ink tank cover, replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810102-2502	M ink tank empty	Renew the M ink tank.
	03810102-2512	Unidentified status of M ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Cannot detect ink level correctly. Close tank cover.	03810102-259E	Subtank empty of M ink tank (ink tank cover opening and refill ink tank usage)	After the ink tank cover, replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810103-2503	C ink tank empty	Renew the C ink tank.
	03810103-2513	Unidentified status of C ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Cannot detect ink level correctly. Close tank cover.	03810103-259D	Subtank empty of C ink tank (ink tank cover opening and refill ink tank usage)	After the ink tank cover, replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810104-2500	BK ink tank empty	Renew the BK ink tank.
	03810104-2510	Unidentified status of BK ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Cannot detect ink level correctly. Close tank cover.	03810104-259C	Subtank empty of BK ink tank (ink tank cover opening and refill ink tank usage)	After the ink tank cover, replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810105-2508	GY ink tank empty	Renew the GY ink tank.
	03810105-2518	Unidentified status of GY ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810106-2506	MBK ink tank empty	Renew the MBK ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810106-2507	MBK2 ink tank empty	Renew the MBK ink tank.
	03810106-2516	Unidentified status of MBK ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
	03810106-2517	Unidentified status of MBK2 ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Cannot detect ink level correctly. Close tank cover.	03810106-25A2	Subtank empty of MBK ink tank (ink tank cover opening and refill ink tank usage)	After the ink tank cover, replace the ink tank.
Cannot detect ink level correctly. Close tank cover.	03810106-25A3	Subtank empty of MBK2 ink tank (ink tank cover opening and refill ink tank usage)	After the ink tank cover, replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810107-250A	R ink tank empty	Renew the R ink tank.
	03810107-251A	Unidentified status of R ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810108-250C	G ink tank empty	Renew the G ink tank.
	03810108-251C	Unidentified status of G ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810109-250B	B ink tank empty	Renew the B ink tank.
	03810109-251B	Unidentified status of B ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810112-2504	PM ink tank empty	Renew the PM ink tank.

Display message	Code*	Condition detected	Action
	03810112-2514	Unidentified status of PM ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810113-2505	PC ink tank empty	Renew the PC ink tank.
	03810113-2515	Unidentified status of PC ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Ink tank is empty. Press OK and replace ink tank.	03810115-2509	PGY ink tank empty	Renew the PGY ink tank.
	03810115-2519	Unidentified status of PGY ink tank (refill ink tank detection)	Invalidate the ink remaining detection function or replace the ink tank.
Ink insufficient. Press OK and replace ink tank.	03810201-2581	Low on the Y ink tank (as during cleaning)	Replace with a fully replenished Y ink tank.
Ink insufficient. Press OK and replace ink tank.	03810201-2591	Low on the Y ink tank (during pre-printing checks)	Replace with a fully replenished Y ink tank.
Ink insufficient. Press OK and replace ink tank.	03810202-2582	Low on the M ink tank (as during cleaning)	Replace with a fully replenished M ink tank.
Ink insufficient. Press OK and replace ink tank.	03810202-2592	Low on the M ink tank (during pre-printing checks)	Replace with a fully replenished M ink tank.
Ink insufficient. Press OK and replace ink tank.	03810203-2583	Low on the C ink tank (as during cleaning)	Replace with a fully replenished C ink tank.
Ink insufficient. Press OK and replace ink tank.	03810203-2593	Low on the C ink tank (during pre-printing checks)	Replace with a fully replenished C ink tank.
Ink insufficient. Press OK and replace ink tank.	03810204-2580	Low on the BK ink tank (as during cleaning)	Replace with a fully replenished BK ink tank.
Ink insufficient. Press OK and replace ink tank.	03810204-2590	Low on the BK ink tank (during pre-printing checks)	Replace with a fully replenished BK ink tank.
Ink insufficient. Press OK and replace ink tank.	03810205-2588	Low on the GY ink tank (as during cleaning)	Replace with a fully replenished GY ink tank.
Ink insufficient. Press OK and replace ink tank.	03810205-2588	Low on the G ink tank (as during cleaning)	Replace with a fully replenished G ink tank.
Ink insufficient. Press OK and replace ink tank.	03810205-2598	Low on the GY ink tank (during pre-printing checks)	Replace with a fully replenished GY ink tank.
Ink insufficient. Press OK and replace ink tank.	03810206-2586	Low on the MBK ink tank (as during cleaning)	Replace with a fully replenished MBK ink tank.
Ink insufficient. Press OK and replace ink tank.	03810206-2587	Low on the MBK2 ink tank (as during cleaning)	Replace with a fully replenished MBK ink tank.
Ink insufficient. Press OK and replace ink tank.	03810206-2596	Low on the MBK ink tank (during pre-printing checks)	Replace with a fully replenished MBK ink tank.
Ink insufficient. Press OK and replace ink tank.	03810206-2597	Low on the MBK2 ink tank (during pre-printing checks)	Replace with a fully replenished MBK ink tank.
Ink insufficient. Press OK and replace ink tank.	03810207-258A	Low on the R ink tank (as during cleaning)	Replace with a fully replenished R ink tank.
Ink insufficient. Press OK and replace ink tank.	03810207-259A	Low on the R ink tank (during pre-printing checks)	Replace with a fully replenished R ink tank.
Ink insufficient. Press OK and replace ink tank.	03810208-259C	Low on the G ink tank (during pre-printing checks)	Replace with a fully replenished G ink tank.
Ink insufficient. Press OK and replace ink tank.	03810209-258B	Low on the B ink tank (as during cleaning)	Replace with a fully replenished B ink tank.

Ink insufficient. Press OK and replace ink tank.	03810212-2584	Low on the PM ink tank (as during cleaning)	Replace with a fully replenished PM ink tank.
Ink insufficient. Press OK and replace ink tank.	03810212-2594	Low on the PM ink tank (during pre-printing checks)	Replace with a fully replenished PM ink tank.

Display message	Code*	Condition detected	Action
Ink insufficient. Press OK and replace ink tank.	03810213-2585	Low on the PC ink tank (as during cleaning)	Replace with a fully replenished PC ink tank.
Ink insufficient. Press OK and replace ink tank.	03810213-2595	Low on the PC ink tank (during pre-printing checks)	Replace with a fully replenished PC ink tank.
Ink insufficient. Press OK and replace ink tank.	03810215-2589	Low on the PGY ink tank (as during cleaning)	Replace with a fully replenished PGY ink tank.
Ink insufficient. Press OK and replace ink tank.	03810215-2599	Low on the PGY ink tank (during pre-printing checks)	Replace with a fully replenished PGY ink tank.
No ink tank loaded. Press OK and check ink tank.	03830101-2521	Y ink tank not installed	Install a Y ink tank.
	03830101-25AC	Y ink tank detachment (when using the refill ink tank)	Install the detached ink tank.
No ink tank loaded. Press OK and check ink tank.	03830102-2522	M ink tank not installed	Install a M ink tank.
	03830102-25AB	M ink tank detachment (when using the refill ink tank)	Install the detached ink tank.
No ink tank loaded. Press OK and check ink tank.	03830103-2523	C ink tank not installed	Install a C ink tank.
	03830103-25AA	C ink tank detachment (when using the refill ink tank)	Install the detached ink tank.
No ink tank loaded. Press OK and check ink tank.	03830104-2520	BK ink tank not installed	Install a BK ink tank.
	03830104-25A9	BK ink tank detachment (when using the refill ink tank)	Install the detached ink tank.
No ink tank loaded. Press OK and check ink tank.	03830105-2528	GY ink tank not installed	Install a GY ink tank.
No ink tank loaded. Press OK and check ink tank.	03830106-2526	MBK ink tank not installed	Install a MBK ink tank.
No ink tank loaded. Press OK and check ink tank.	03830106-2527	MBK2 ink tank not installed	Install a MBK ink tank.
	03830106-25B0	MBK ink tank detachment (when using the refill ink tank)	Install the detached ink tank.
	03830106-25B1	MBK2 ink tank detachment (when using the refill ink tank)	Install the detached ink tank.
No ink tank loaded. Press OK and check ink tank.	03830107-252A	R ink tank not installed	Install a R ink tank.
No ink tank loaded. Press OK and check ink tank.	03830108-252C	G ink tank not installed	Install a G ink tank.
No ink tank loaded. Press OK and check ink tank.	03830109-252B	B ink tank not installed	Install a B ink tank.
No ink tank loaded. Press OK and check ink tank.	03830112-2524	PM ink tank not installed	Install a PM ink tank.
No ink tank loaded. Press OK and check ink tank.	03830113-2525	PC ink tank not installed	Install a PC ink tank.
No ink tank loaded. Press OK and check ink tank.	03830115-2529	PGY ink tank not installed	Install a PGY ink tank.
Ink tank error. Press OK and replace ink tank.	03830201-2541	Y ink tank ID error	Replace with a valid Y ink tank.
Ink tank error. Press OK and replace ink tank.	03830202-2542	M ink tank ID error	Replace with a valid M ink tank.
Ink tank error. Press OK and replace ink tank.	03830203-2543	C ink tank ID error	Replace with a valid C ink tank.
Ink tank error. Press OK and replace ink tank.	03830204-2540	BK ink tank ID error	Replace with a valid BK ink tank.
Ink tank error. Press OK and replace ink tank.	03830205-2548	GY ink tank ID error	Replace with a valid GY ink tank.
Ink tank error. Press OK and replace ink tank.	03830206-2546	MBK ink tank ID error	Replace with a valid MBK ink tank.

Display message	Code*	Condition detected	Action
Ink tank error. Press OK and replace ink tank.	03830206-2547	MBK2 ink tank ID error	Replace with a valid MBK ink tank.
Ink tank error. Press OK and replace ink tank.	03830207-254A	R ink tank ID error	Replace with a valid R ink tank.
Ink tank error. Press OK and replace ink tank.	03830208-254C	G ink tank ID error	Replace with a valid G ink tank.
Ink tank error. Press OK and replace ink tank.	03830209-254B	B ink tank ID error	Replace with a valid B ink tank.
Ink tank error. Press OK and replace ink tank.	03830212-2544	PM ink tank ID error	Replace with a valid PM ink tank.
Ink tank error. Press OK and replace ink tank.	03830213-2545	PC ink tank ID error	Replace with a valid PC ink tank.
Ink tank error. Press OK and replace ink tank.	03830215-2549	PGY ink tank ID error	Replace with a valid PGY ink tank.
Maintenance cartridge full. Replace the maintenance cartridge.	03841001-2819	Maintenance cartridge full	Renew the maintenance cartridge.
No Maintenance Cartridge capacity. Replace the maintenance cartridge.	03841001-281B	Not enough space in the maintenance cartridge prior to cleaning	Replace the maintenance cartridge.
No maintenance cartridge. Check the maintenance cartridge.	03841101-2818	Maintenance cartridge not installed	Install the maintenance cartridge.
Maintenance cartridge problem. Replace the maintenance cartridge.	03841201-2816	Maintenance cartridge EEPROM error	Renew the maintenance cartridge.
Maintenance cartridge problem. Replace the maintenance cartridge.	03841201-2817	Maintenance cartridge ID error	Renew the maintenance cartridge.
Manual printing is selected, but a roll is loaded. Press Load/Eject and remove the roll.	03860001-2E0C	Data with a cut sheet specification has been received when roll media are loaded.	Load cut sheets at the paper tray port.
Sheet printing is selected. Press Load/Eject and load sheets.	03860002-2E02	Data with a cut sheet specification has been received but no cut sheets are loaded.	Load cut sheets at the paper tray port.
Roll printing is selected, but sheets are loaded. Press OK, remove the sheets, and load a roll.	03860002-2E0A	Data with a roll media specification has been received when a cut sheet tray is loaded.	Replace with roll media.
This type of media is not compatible with HP-GL/2.	03860006-2825	Paper type mismatch at HP-GL/2 printing	Exchange for the compatible paper to HP-GL/2 before reprinting.
Borderless printing not possible. Check roll position. Online: Print Load/Eject: Change Paper	03861001-2405	Paper loaded at a position inaccessible for borderless printing	Check to see if a borderless printing spacer is installed. Reload the paper.
Borderless printing not possible. Check paper size setting.	03861001-2406	Data unfit for borderless printing	Check the data, and then print again.
Borderless printing not possible. Paper stretched or shrank. Confirm usage cond. of the paper.	03861001-2407	Borderless printing disabled (engine detection)	Reload the paper.
Borderless printing not possible. Check supported paper.	03861001-2408	Borderless printing disabled (unsupported size)	Check the media size. Change the media size.
Insufficient paper for job. Online: Print Stop: Stop Printing Load/Eject: Change Paper	03862000-2E09	Not enough roll media on remaining roll media quantity detection	Renew the supply of roll media.
Insufficient paper for job.	03862001-2E31	Not enough roll media	Renew the supply of roll media.
Insufficient paper for job.	03862002-2E32	Not enough roll media (lower roll)	Renew the supply of roll media.
Cannot adjust printhead. Press Online to clear the error and readjust printhead.	03863000-2820	Printhead registration unadjustable	Check the paper on which a pattern is printed for smears. Check the environment for interferences from outside light. Clean the printhead.

Display message	Code*	Condition detected	Action
Cannot adjust printhead. Press Online to clear the error and readjust printhead.	03863000-2821	LF unadjustable	Check the paper on which a pattern is printed for smears. Check the environment for interferences from outside light. Clean the printhead.
Cannot adjust eccentric. Press Online to clear the error.	03863000-2822	Eccentricity correction disabled	Check to see if paper has not jammed.
Cannot adjust optic axis. Press Online to clear the error.	03863000-2824	Optical axis error	Check the multi sensor. Check the head management sensor.
	03863000-2826	Eccentricity correction error	Check to see if paper has not jammed.
	03863000-282A	Carriage motor rotation adjustment error	Check the carriage unit and surrounding parts. Replace the carriage motor.
	03863000-282B	Carriage motor rotation adjustment error (when detecting the vibration)	Check the carriage unit and surrounding parts. Replace the carriage motor.
CRNG XXX XXX XXX XXX	03863000-2831	Printhead registration unadjustable (when performing CR REG)	Check the paper on which a pattern is printed for smears. Check the environment for interferences from outside light. Clean the printhead.
Cannot calibrate. Press OK and try calibration again.	03863000-2F34	Color calibration adjustment failure error	Check the environment for interferences from outside light. Replace the multi sensor unit.
Error E02827	03863000-4034	Sensor calibration error	Check the paper on which a pattern is printed for smears. Check the environment for interferences from outside light. Clean the printhead.
PapWidth Mismatch.	03864001-2E45	Roll media width mismatch (when pressing the Load button)	Change the roll media.
Wrong paper type.	03864002-2E42	Paper type mismatch	Check the type of paper that can be fed and reload the paper.
Borderless printng not possible. Check roll position.	03864004-2409	Paper loaded at a position inaccessible for borderless printing	Check to see if a borderless printing spacer is installed. Reload the paper.
Borderless printng not possible. Check supported paper.	03864004-240A	Borderless printing disabled (unsupported size, when pressing the Load button)	Check the media size. Change the media size.
Cannot cut paper. Lift the release lever and reload the paper.	03870001-2015	Cutting failure	Cut paper manually. Check the cutter.
Cannot cut paper. Lift the release lever and reload the paper.	03870001-2019	Cut failure (during jam occure)	Check the cutter unit and surrounding parts. Replace the cutter.
Media Take-up error. Check the paper. Press Online to clear error.	03890000-2920	Media take-up unit cannot take up the media	Check to see if paper has not jammed.
Rewinding error. Check for jam at indicated position. Press Online to clear error.	03890000-2921	Media take-up take up the media continuously	Check the media take-up paper detection sensor and surrounding part. Replace the media take-up paper detection sensor.
Unknown file. Check file format. Turn off printer, wait a while, then turn it on again.	03900001-4042	MIT data transfer failure	Verify the validity of MID data before transferring it.
Unknown file. Check file format. Turn off printer, wait a while, then turn it on again.	03900001-4049	ROM data for another model has been transferred.	Transmit valid ROM data.

## 8.4 Service Call Table

### 8.4.1 Service Call Errors

iPF8000S / iPF8100

\*Codes correspond to the numbers shown on the DISPLAY in the service mode.

T-8-6

Code*	Description	Action
E141-4046	Number of recovery rotations reaching 50,000 or more	Replace the purge kit, and then clear the parts counter in the service mode.
E144-4047	Ink supply count error	Replace the tube unit, and then clear the parts counter in the service mode.
E144-4048	Initial filling error	Replace the ink supply unit.
E146-4001	Borderless/flow idle ejection/mist recovery count error	Replace the platen duct or mist fan or suction fan or waste ink absorber, and then clear the parts counter in the service mode.
E161-403E	Abnormal temperature rise in printhead R	Replace the printhead R.
E161-403F	Abnormal temperature rise in printhead L	Replace the printhead L.
E196-4034	Multi sensor unit version error	Replace the multi sensor unit.
E196-4040	Checksum error	Replace the main controller PCB.
E196-4041	Flash memory erase error	Replace the main controller PCB.
E196-4042	Flash memory write error	Replace the main controller PCB.
E196-4045	EEPROM write error	Replace the main controller PCB.
E196-404C	Serial number mismatch between boards	Execute PCB replacement mode or replace the main controller PCB.
E196-404D	Machine ID mismatch between boards	Replace the main controller PCB.
E196-404E	EEPROM read error	Replace the main controller PCB.
E198-401C	RTC error	Replace the lithium battery or replace the main controller PCB.
E198-401D	RTC low battery error	Replace the lithium battery or replace the main controller PCB.
E198-401E	RTC clock stop	Replace the lithium battery or replace the main controller PCB.
E199-404B	Temperature/humidity sensor board connector out of position	Check the temperature/humidity sensor board connector or replace the board.
E602-401A	HDD failure	Replace the HDD unit.
E602-401B	HDD connection error	Check the HDD connector/Replace the HDD unit.

### 8.4.2 Service Call Errors

iPF8000

\*Codes correspond to the numbers shown on the DISPLAY in the service mode.

T-8-7

Code*	Description	Action
E141-4046	Number of recovery rotations reaching 50,000 or more	Replace the purge kit, and then clear the parts counter in the service mode.
E144-4047	Ink supply count error	Replace the tube unit, and then clear the parts counter in the service mode.
E144-4048	Initial filling error	Replace the ink supply unit.
E146-4001	Borderless/flow idle ejection/mist recovery count error	Replace the platen duct or mist fan or suction fan or waste ink absorber, and then clear the parts counter in the service mode.

Code*	Description	Action
E161-403E	Abnormal temperature rise in printhead R	Replace the printhead R.
E161-403F	Abnormal temperature rise in printhead L	Replace the printhead L.
E196-4034	Multi sensor unit version error	Replace the multi sensor unit.
E196-4040	Checksum error	Replace the main controller PCB.
E196-4041	Flash memory erase error	Replace the main controller PCB.
E196-4042	Flash memory write error	Replace the main controller PCB.
E196-4045	EEPROM write error	Replace the main controller PCB.
E196-404C	Serial number mismatch between boards	Execute PCB replacement mode or replace the main controller PCB.
E196-404D	Machine ID mismatch between boards	Replace the main controller PCB.
E196-404E	EEPROM read error	Replace the main controller PCB.
E198-401C	RTC error	Replace the lithium battery or replace the main controller PCB.
E198-401D	RTC low battery error	Replace the lithium battery or replace the main controller PCB.
E198-401E	RTC clock stop	Replace the lithium battery or replace the main controller PCB.
E199-404B	Temperature/humidity sensor board connector out of position	Check the temperature/humidity sensor board connector or replace the board.

### 8.4.3 Service Call Errors

iPF8300 / iPF8300S

\*Codes correspond to the numbers shown on the DISPLAY in the service mode.

T-8-8

Code	Description	Action
E141-4046	Number of recovery rotations reaching 50,000 or more	Replace the purge unit, and then clear the parts counter in the service mode.
E144-4047	Number of carriage scan operation is full	Replace the tube unit, and then clear the parts counter in the service mode.
E144-4048	Printhead ink filling failure	Replace the printhead.
E146-4001	Waste ink recovery count error	Replace the platen duct or mist fan or mist filter or suction fan, and then clear the parts counter in the service mode. (Confirm the parts reached to the exchange value by the service mode or PRINT INF.)
E161-403E	Abnormal temperature rise in left printhead	Replace the left printhead.
E161-403F	Abnormal temperature rise in right printhead	Replace the right printhead.
E194-404A	Non-discharging nozzle count error	Replace the head management sensor unit, and then clear the parts counter in the service mode.
E196-4040	Checksum error (when execute the firmware update)	Execute firmware update or replace the main controller PCB.
E196-4041	Flash memory erase error (when execute the firmware update)	Execute firmware update or replace the main controller PCB.
E196-4042	Flash memory write error (when execute the firmware update)	Execute firmware update or replace the main controller PCB.
E196-4043	Memory error (when execute the firmware update)	Execute firmware update or replace the main controller PCB.
E196-4044	Firmware size error (when execute the firmware update)	Execute firmware update or replace the main controller PCB.
E196-4045	EEPROM read/write error (controller part)	Replace the main controller PCB.
E196-4049	Firmware data error (when execute the firmware update)	Execute firmware update or replace the main controller PCB.
E196-404C	Serial number mismatch between main controller PCB and maintenance cartridge ROM PCB.	Execute PCB replacement mode or replace the main controller PCB.
E196-404D	Machine ID mismatch between main controller PCB and maintenance cartridge ROM PCB.	Execute PCB replacement mode or replace the main controller PCB.
E196-404E	EEPROM read/write error (engine part)	Replace the main controller PCB.
E198-401C	RTC error	Replace the lithium battery or replace the main controller PCB.
E198-401D	RTC low battery error	Replace the lithium battery or replace the main controller PCB.
E198-401E	RTC clock stop	Replace the lithium battery or replace the main controller PCB.
E199-404B	Temperature/humidity sensor connector out of position	Check the temperature/humidity sensor connector or replace the sensor.

---

---

Code	Description	Action
E602-401A	HDD read/write error (HDD failure)	Replace the HDD unit.
E602-401B	HDD connection error	Check the HDD connector or replace the HDD.
E602-405A	HDD size error	Replace the HDD unit.
