

Service Bulletin

SB Number:	SB 2AV-004	Issue Date: 10/05/2001
Subject:	Fixing the IP address	
Model:	KM-1530 / KM-2030	

As you probably know, in previous KM machines, the IP address could not be set manually when the 'DCHP setting' was switched to 'ON' (factory default = ON).

In this case DHCP had to be disabled in order to be able to set the IP address manually.

Please be informed that starting from the production of the KM-1510, KM-1810, KM-1530, KM-2030 and future machines, the IP address can be set / changed manually even when 'DCHP' is set to 'ON'.

IMPORTANT NOTE:

This means however that if the IP address has been set manually while the DCHP is set to on, the DCHP server will supply a new IP address and hereby overwrite the previous manual setting !

Please bear in mind that if a fixed IP address is required and one does not want to make use of the DHCP setting, **you must disable the DCHP setting first** to prevent overwriting of the previously set IP address !
